

Xenios Technologies — Website Design Specification & Verbatim Copy

Document type: Designer + Developer handoff **Domain:** xenios technology . com **Company:** Xenios Technologies, Inc. — Austin, TX **Stage:** Pre-seed, stealth **Audience:** Proactive / preventive health practitioners **Visual North Star:** healf HX26 (London, 180 Studios, 20–21 June 2026) — heavy geometric sans, atmospheric gradients, cream-paper + pure-ink palette, B&W editorial imagery **Single contact inbox:** team@xenios technology . com **Socials:** Instagram @officialxenios · LinkedIn officialxenios (Healf)

PART 1 — VISUAL DESIGN SYSTEM (healf-inspired)

1.1 How this differs from the prior direction

The prior spec leaned **Editorial-Technical:** Fraunces serif headlines, mono-accented technical text, a paper-and-ink editorial feel built around long-form authority. We are replacing that direction.

The new direction is **Atmospheric-Display:** heavy geometric sans-serif at display scale, lowercase wordmark with a period (xenios.), warm-cream paper background, pure-ink type, and six named atmospheric gradient cards that act as tonal identifiers for sections. Imagery shifts from editorial portraiture (which we cannot use under stealth) to B&W product mockups, abstract agent-thread captures, and pure-typography compositions inside rounded-2xl cards. The vibe is closer to a Sotheby's catalog crossed with an Apple keynote than to a magazine.

1.2 Color tokens

Token	Hex	Role
--paper	 #F2EDE2	Default page background — warm cream
--paper-soft	 #EDE6D7	Section alternates, hairline panels
--cream	 #FBF7EC	Lightest tonal lift — input fields on paper
--ink	 #000000	Primary text, dark-card background
--ink-soft	 #1A1A1A	Secondary surfaces, dark-mode cards
--ink-muted	 #3A3A3A	De-emphasized body on paper
--rule	#1A1A1A14	8% black hairline rules

Token	Hex	Role
<code>--orange-warm</code>	 <code>#E97D42</code>	Brecka-card energy: warm orange
<code>--orange-fire</code>	 <code>#D85F1F</code>	Deeper fire accent, hover states
<code>--orange-cream</code>	 <code>#F0934D</code>	Light orange used in mist gradients
<code>--blue-mist</code>	 <code>#A8C4E0</code>	Sturm-card energy: soft blue mist on cream
<code>--blue-electric</code>	 <code>#4A78D9</code>	Swart/Huberman: electric blue on ink
<code>--blue-denim</code>	 <code>#6F8DBF</code>	HX26 closing card: confident denim
<code>--blue-deep</code>	 <code>#1E3A6F</code>	Deep blue stop for atmospheric gradients
<code>--mist-white</code>	 <code>#FFFFFF</code>	Rare, used for highest-contrast UI only
<code>--success</code>	 <code>#2E7D5B</code>	Form success states
<code>--warn</code>	 <code>#B45309</code>	Form warning states
<code>--error</code>	 <code>#9B2C2C</code>	Form error states

Contrast posture: All body text on `--paper` uses `--ink` (`#000`) for AAA. CTA buttons use `--ink` background with `--paper` foreground; hover swaps to `--orange-fire` ground with `--paper` foreground.

1.3 Typography scale

Family stack (display + body):

```
--font-display: "PP Neue Montreal", "Aeonik Pro", "GT Walsheim", "Inter Tight",
system-ui, sans-serif;
--font-body:    "PP Neue Montreal", "Aeonik Pro", "Inter", system-ui, sans-serif;
--font-mono:    "PP Neue Montreal Mono", "JetBrains Mono", ui-monospace,
monospace;
```

Primary recommendation: **PP Neue Montreal** (Pangram Pangram, commercial license).

Fallback: **Aeonik Pro** (CoType). Free fallback: **Inter Tight** with `font-feature-settings: "ss01", "cv11"` for the geometric character.

Token	Use	Size (desktop)	Mobile	Line- height	Tracking	Weight	Case
<code>display-xl</code>	Hero name moments (<code>XENIOS.</code>)	200px	96px	0.85	-0.04em	900	UPPER
<code>display-lg</code>	Section title cards	128px	72px	0.88	-0.035em	800	UPPER
<code>display-md</code>	Inner page H1	88px	56px	0.92	-0.03em	800	UPPER
<code>h1</code>	Page-level	64px	44px	1.0	-0.025em	700	Mixed
<code>h2</code>	Section	44px	32px	1.05	-0.02em	700	Mixed
<code>h3</code>	Subsection	28px	24px	1.2	-0.01em	600	Mixed
<code>h4</code>	Card title	20px	18px	1.3	-0.005em	600	Mixed
<code>eyebrow</code>	Tracked uppercase labels	12px	12px	1.4	0.18em	600	UPPER
<code>body-lg</code>	Lead paragraph	20px	18px	1.55	-0.005em	400	Mixed
<code>body</code>	Default	16px	16px	1.6	0	400	Mixed
<code>body-sm</code>	Captions, footnotes	14px	14px	1.55	0	400	Mixed
<code>mono-sm</code>	Technical labels, counter digits	13px	13px	1.4	0.02em	500	UPPER

1.4 Wordmark

The mark is `xenios.` set in display weight 800, lowercase, period included, no logo glyph. On dark cards the period may render in `--orange-warm` as a single tonal accent. Optional modifiers: `xenios.0S` in technical contexts (footer, security page), `xenios.` standalone in marketing.

Clear-space: minimum 1× cap-height on all sides. Minimum size: 16px cap-height (web), 12pt (print).

1.5 The six atmospheric gradient presets

These are the visual identity DNA. Each is a **soft, blurred, painted mist** — never a sharp linear ramp. Implementation pattern:

CSS

```
.atmos {
  position: relative;
  isolation: isolate;
  background: var(--atmos-base);
}

.atmos::before {
  /* the radial mist */
  content: "";
  position: absolute; inset: 0;
  background: var(--atmos-mist);
  filter: blur(40px);
  opacity: 0.9;
  z-index: -2;
}

.atmos::after {
  /* grain overlay */
  content: "";
  position: absolute; inset: 0;
  background-image: url("/noise.svg"); /* 200×200 SVG turbulence */
  opacity: 0.10;
  mix-blend-mode: overlay;
  z-index: -1;
  pointer-events: none;
}
```

Noise SVG (paste once, reuse):

html

```
<svg xmlns="http://www.w3.org/2000/svg" width="200" height="200">
  <filter id="n"><feTurbulence type="fractalNoise" baseFrequency="0.9" numOctaves="2"
  <rect width="100%" height="100%" filter="url(#n)" opacity="0.6"/>
</svg>
```

Preset	Use case	<code>--atmos-base</code>	<code>--atmos-mist</code>
1. Ember (orange on cream)	Hero, "Why now" thesis card	☐ #F2EDE2	<code>radial-gradient(ellipse 80% 60% at 30% 40%, #E97D42 0%, #F0934D 25%, transparent 70%)</code>
2. Aurora (blue mist on cream)	"How it works" steps, calm sections	☐ #F2EDE2	<code>radial-gradient(ellipse 70% 55% at 70% 35%, #A8C4E0 0%, #C8DCEC 30%, transparent 75%)</code>
3. Voltage (electric blue on ink)	Product / agent mockup cards	☒ #000000	<code>radial-gradient(ellipse 60% 80% at 50% 100%, #4A78D9 0%, #1E3A6F 40%, transparent 80%)</code>
4. Forge (orange on ink)	"We are hiring" / urgency cards	☒ #000000	<code>radial-gradient(ellipse 70% 60% at 80% 80%, #D85F1F 0%, #E97D42 30%, transparent 75%)</code>
5. Denim (full blue field)	Manifesto banner, final CTA	☐ #6F8DBF	<code>radial-gradient(ellipse 90% 70% at 50% 30%, #A8C4E0 0%, #6F8DBF 60%, #1E3A6F 100%)</code>
6. Bone (pure cream, no color)	Default editorial body, FAQ, legal	☐ #F2EDE2	<code>radial-gradient(ellipse 100% 60% at 50% 0%, #FBF7EC 0%, transparent 60%)</code>

Slow drift animation (60–90s loop, optional, respects `prefers-reduced-motion`):

CSS

```
@keyframes drift {
  0% { transform: translate3d(-2%, -1%, 0) scale(1.05); }
  50% { transform: translate3d( 2%,  1%, 0) scale(1.10); }
  100% { transform: translate3d(-2%, -1%, 0) scale(1.05); }
}

@media (prefers-reduced-motion: no-preference) {
  .atmos::before { animation: drift 75s ease-in-out infinite; }
}
```

1.6 Component library

Cards. All cards are `border-radius: 20px`, no border, atmospheric gradient ground, generous padding (32px mobile / 48px desktop). Speaker-card pattern is inherited as the "thesis card" — eyebrow row at top (wordmark left, location/stage right), massive name/headline center, B&W abstract image or pure-typography slot below, role tag below image, descriptor copy at bottom.

Buttons.

- Primary: 56px height, `--ink` ground, `--paper` text, 20px horizontal padding, 999px radius, weight 600, 15px size, 0.02em tracking, UPPER. Hover: ground → `--orange-fire`. Focus: 3px outline at `--blue-electric`.
- Secondary: same geometry, transparent ground, 1.5px `--ink` border, `--ink` text. Hover: ground → `--ink`, text → `--paper`.
- Ghost: text-only, underline appears on hover, used in nav and inline links.

Inputs. 56px height, `--cream` ground on paper sections / `--ink-soft` on dark sections, 1px border at `--rule`, 16px radius, 16px text, 16px horizontal padding. Focus: 2px ring at `--blue-electric`, border darkens to `--ink`. Label sits above at `eyebrow` size. Error message below at `body-sm` in `--error`.

Nav. Sticky top, 72px tall, `--paper` ground with backdrop-blur(20px) and 80% opacity when scrolled. Left: `xenios.` wordmark. Right: text links (Manifesto · Waitlist · About · Careers) with a primary "Join the waitlist" CTA. Mobile collapses to hamburger overlaying full-screen `--ink` panel with `display-md` link list.

Footer. `--ink` ground, `--paper` text. Three columns on desktop, stacked on mobile. Column 1: `xenios.` wordmark + tagline + Austin TX address line. Column 2: Sitemap. Column 3: Socials (Instagram @officialxenios, LinkedIn officialxenios) and `team@xeniosotechnology.com`. Hairline at top in 8% paper.

Counter component (waitlist). Inline in hero and final CTA. Pattern:

```
[ON THE LIST]    00,550    [PRACTITIONERS WAITING]
                  ↑ tabular-nums, mono-sm style, large display weight
```

Visually: digits in `display-md` weight 800 with `font-variant-numeric: tabular-nums`, labels in `eyebrow`. On increment, the changed digit fades out 120ms / fades in 180ms with a 4px upward translate.

Hero. Full-viewport `--paper` ground with **Ember** atmospheric mist top-left. Top ribbon (12px tall) in `--ink` carrying a rotating one-line announcement. Massive display-xl headline. Lead paragraph in body-lg, max-width 640px. Primary CTA + secondary CTA stacked or inline. Live

counter below CTAs. Optional abstract B&W product-mockup card floats at right on desktop (Voltage preset).

Section labels (eyebrow rows). `PRE-SEED / AUSTIN, TX` · `MAY 2026` · `STEALTH` — set in mono-sm, 0.18em tracking, ALL CAPS, separated by `·` or `—`. This mirrors the `20-21 JUNE 2026 / 180 STUDIOS LONDON` rhythm from healf HX26.

1.7 Spacing scale (8-pt base)

`4, 8, 12, 16, 24, 32, 48, 64, 96, 128, 192` (CSS vars `--s-1` through `--s-11`). Section vertical padding: 128px desktop / 80px mobile. Container max-width: 1280px with 24px (mobile) / 48px (desktop) gutters.

1.8 Motion principles

- **Atmospheric, not flashy.** Gradients drift on 60-90s loops.
- **Page-in:** fade-up (8px, 400ms, ease-out, 60ms stagger per child).
- **Counter increment:** digit-tick described above.
- **Hover:** 180ms ease-out, no scaling beyond 1.02.
- **Reduced motion:** all looping animations disabled, all transitions clamped to ≤120ms.

1.9 Imagery direction (no faces)

Since stealth forbids founder photos and we have no clients, the "speaker card portrait slot" is filled with:

1. **B&W abstract product UI mockups** — agent-thread captures, command-bar moments, dashboard fragments, all desaturated and overlaid with the grain SVG at 8% opacity.
2. **Atmospheric gradient compositions** — pure color fields using a single preset, no UI inside, used as breakers.
3. **Code-like terminal/agent log mockups** — `--ink-soft` ground, `--paper` mono text, with one `--orange-warm` accent line representing an agent decision.
4. **Pure-typography compositions** — a single quote pulled from the manifesto, set in display-lg, on a Bone or Denim ground.

Every image slot uses a rounded-2xl (20px) container, 4:5 portrait aspect on cards, 16:9 on banners.

PART 2 — SITEMAP & INFORMATION ARCHITECTURE

v1 (launch — 2-week sprint)

/	Homepage
/manifesto	Manifesto (long-form thesis)
/waitlist	Waitlist sign-up + live counter
/about	Stealth team page
/careers	Open roles
/faq	Frequently asked
/security	Security & data posture
/terms	Terms of service
/privacy	Privacy policy
/api/waitlist	POST handler (server)
/api/waitlist/count	GET handler – edge-cached, returns { count }
/api/waitlist/stream	Optional SSE (defer if Pro plan not in place)
/sitemap.xml	Auto-generated
/robots.txt	Allow all, sitemap reference

v2 (post-launch, 30–60 days)

/research	Brief field notes from coach interviews
/changelog	Public build log (sparse, on-brand)
/press	Press kit (logo pack, one-line description, contact)
/partners	For platforms wanting to integrate (wearables, labs)

v3 (private beta gating, 60–120 days)

/app/login	Auth (Supabase or Clerk)
/app	Authenticated dashboard
/app/coach	Coach console (private beta only)
/invite/[token]	Magic-link invite redemption

`/app/*` will sit behind a token-gated waitlist invite flow; not indexed.

PART 3 — VERBATIM COPY FOR EVERY PAGE

Convention: every code block below is **copy-ready** — lift verbatim. Square-bracket items like `[count]` are dynamic variables.

<title>

Xenios – the operating system for proactive health practitioners

Meta description

Xenios is an AI-native operating system for coaches, trainers, nutritionists, and performance specialists building proactive, preventive practices. Join the waitlist.

OG image concept Bone preset background. `xenios.` wordmark top-left in display-md. Right-aligned eyebrow `PRE-SEED · AUSTIN, TX · 2026`. Center: display-lg headline `THE OS FOR PROACTIVE HEALTH.` Bottom-right: live counter snapshot rendered at build time via `@vercel/og`.

Eyebrow:

THE OPERATING SYSTEM FOR PROACTIVE HEALTH

H1 (display-xl, two lines):

COACHING WAS NEVER
THE BOTTLENECK.

Lead paragraph (body-lg):

The bottleneck was every hour you spent in spreadsheets, intake forms, message threads, lab portals, and billing tools instead of with your client. Xenios is the AI-native operating system that takes the work off your plate so the work that matters – the human work – gets your full attention. Built for the practitioner who treats prevention as the product.

Primary CTA: [Join the waitlist →](#) → [/waitlist](#) Secondary CTA: [Read the manifesto](#) → [/manifesto](#) Live counter (immediately below CTAs):

ON THE LIST [count] PRACTITIONERS WAITING – UPDATING LIVE

Metrics strip

Eyebrow:

WHAT THE INDUSTRY LOOKS LIKE TODAY

Four stats:

\$4.5T global wellness economy, growing faster than sick-care
60% of preventable chronic disease begins with daily behavior
18 hrs the average solo coach loses each week to admin
1 coach. one. running their entire business on twelve tools.

Thesis cards (4 cards, atmospheric gradient grid)

Section eyebrow:

THE THESIS

Section H2:

Healthcare optimizes for sickness. We optimize for the years before it.

Card 1 — Ember preset

- Eyebrow: [01 – THE SHIFT](#)
- H3: [Prevention is becoming the product.](#)
- Body:

GLP-1 protocols, continuous glucose monitors, wearable-driven sleep coaching, longevity panels, functional medicine, recovery science – the entire shape of "health" is moving upstream of the hospital. The practitioner who lives upstream needs tools built for upstream work. Almost nothing on the market was.

Card 2 — Aurora preset

- Eyebrow: 02 – THE PRACTITIONER
- H3: The independent coach is the new primary care.
- Body:

Personal trainers, registered dietitians, GLP-1 coaches, longevity specialists, functional medicine practitioners, performance and recovery experts, RNs running cash-pay practices, biohackers running paid 1:1 programs – they are now the people most clients see first, most often, and most willingly. Xenios is built for all of them.

Card 3 — Voltage preset (dark)

- Eyebrow: 03 – THE TECHNOLOGY
- H3: Agentic AI changes the unit economics of care.
- Body:

A solo practitioner can now run the operations of a clinic. Intake, programming, check-ins, education, accountability, billing, compliance – the layers that used to require a back office can be handled by agents that know your client, your protocol, and your voice. The leverage that used to belong to systems now belongs to practitioners.

Card 4 — Forge preset (dark)

- Eyebrow: 04 – THE WINDOW
- H3: This decade decides the shape of preventive care.
- Body:

The infrastructure that gets built now becomes the rails for the next twenty years of human performance, longevity, and proactive medicine. We intend to build those rails – and to put them in the hands of the people doing the actual work.

Eyebrow:

HOW XENIOS WORKS

H2:

One workspace. Every client. Every protocol. Every hour you used to lose.

Step 01 — Onboard once.

A single intake replaces seven forms. Your client uploads what they have – labs, wearables, history, goals – and Xenios structures all of it into a living profile your agents can actually reason over.

Step 02 — Program in plain language.

Describe the protocol the way you would say it out loud. Xenios turns it into a schedule, a check-in cadence, an education plan, and the daily prompts your client actually needs. You stay the author. The agent handles the scaffolding.

Step 03 — Run the practice on autopilot.

Check-ins go out, answers come back, adjustments get drafted, escalations get flagged – and every artifact lands in a single thread you can scan in two minutes a day, not two hours.

Step 04 — Show the work.

Outcomes, adherence, biomarker trends, before-and-after – all rendered in the language your client will recognize and the language a referring physician will respect. The story of the protocol writes itself.

Feature deep-dives (3 features, alternating dark / light)

Eyebrow:

WHAT YOU GET IN THE BOX

The work you do is real. The software finally is too.

Feature 1 — Voltage preset

- Eyebrow: THE LIVING CLIENT PROFILE
- H3: Everything you'd want to know, structured the way an agent can use it.
- Body:

Wearable streams, lab values, food logs, training history, subjective check-ins, medications, sleep, stress – unified into a single profile that updates itself. Stop hunting through threads. Start asking questions and getting answers.

Feature 2 — Bone preset

- Eyebrow: THE PROTOCOL ENGINE
- H3: Author once. Personalize a thousand times.
- Body:

Write your protocol the way you actually think about it. Xenios adapts the cadence, the language, and the daily delivery to each individual client – without you re-writing anything, and without losing your voice.

Feature 3 — Forge preset

- Eyebrow: THE COACH AGENT
- H3: An always-on member of your practice.
- Body:

The agent answers the obvious questions, drafts the harder ones for your review, flags what needs you, and never confuses being helpful with being a clinician. You stay in charge of judgment. The agent stays in charge of hours.

Audience split (eight-tile grid, Bone background)

Eyebrow:

BUILT FOR EVERY PRACTITIONER WORKING UPSTREAM OF DISEASE

H2:

If your job is to keep someone well, Xenios is for you.

Tiles (each: small icon-mark optional, h4 label, one-line body):

PERSONAL TRAINERS & STRENGTH COACHES

Move the body. Track the work. Get the hours back.

NUTRITIONISTS & REGISTERED DIETITIANS

Meal logs, macros, labs, GLP-1 protocols – one surface.

GLP-1 & METABOLIC HEALTH COACHES

Side-effect monitoring, dose tracking, behavior change – handled.

LONGEVITY & PERFORMANCE SPECIALISTS

Biomarker panels, VO₂ max, HRV, sleep architecture – read at a glance.

FUNCTIONAL MEDICINE PRACTITIONERS

Root-cause protocols, supplement stacks, retest cadence – in one place.

HEALTH COACHES & WELLNESS PROS

Habits, mindset, accountability, and the receipts to prove progress.

RNs & RDs IN CASH-PAY PRACTICE

The clinical-grade workspace your old EMR refused to be.

RECOVERY, SLEEP & MIND COACHES

Subjective + objective signal, rendered as one honest picture.

Social proof / trust signals (Bone, no logos we don't have)

Eyebrow:

WHY WE BUILT IT

H2:

We have shipped infrastructure that healthcare actually adopted.

Body:

The founding team's prior work in healthcare infrastructure is responsible for more than \$710M in combined enterprise outcomes – including the build-outs behind FinDox and InstaMed. We have written the boring layers underneath payments, compliance, and clinical data exchange. We know what production-grade looks like in a regulated environment. We are building Xenios with that same standard from day one.

Sub-row of trust tags (eyebrow tracked, single line):

HIPAA-READY ARCHITECTURE · SOC 2 ROADMAP · US-HOSTED DATA · ENCRYPTED AT REST & IN TRANSIT

Team teaser (anonymized)

Eyebrow:

WHO IS BUILDING THIS

H2:

A small team that has done this before.

Body:

A founding team with prior exits in healthcare infrastructure, AI/ML, and applied clinical informatics. Decades of combined experience inside the systems that actually move data, money, and care in the United States. Based in Austin. Hiring quietly. Talking to a small number of practitioners we trust.

CTA: [Read more about the team →](#) → </about>

Final CTA (Denim preset, full-bleed)

Eyebrow:

JOIN THE WAITLIST

H2 (display-lg, ALL CAPS):

THE NEXT ERA OF PROACTIVE HEALTH WILL BE BUILT BY PRACTITIONERS WHO REFUSED TO
ACCEPT THE TOOLS THEY WERE HANDED.

Body:

We are quietly onboarding the first hundred practices that fit. Add your name. We
will be in touch when your slot opens.

<title>

Manifesto – Xenios

Meta description

Why we are building Xenios: a manifesto for the practitioners building the next era of proactive, preventive, performance-driven health.

OG image concept Denim preset full-bleed. Display-lg ALL CAPS pull-quote: THE PRACTITIONER IS THE PLATFORM. Wordmark bottom-left, eyebrow bottom-right.

Page header

Eyebrow:

MANIFESTO · MAY 2026 · AUSTIN, TX

H1 (display-md):

The practitioner is the platform.

Body (long-form, ~1,550 words)

There is a quiet truth inside modern healthcare that almost everyone working in it can feel and almost no one says out loud: the system was never built to keep you well. It was built to intervene when you weren't. Every incentive – reimbursement codes, ten-minute appointments, the legal architecture of liability, the EHRs that govern the workflow – is shaped around the moment something has already gone wrong. The further upstream of that moment you try to work, the more the system stops being useful.

For most of the last century that was fine, because the upstream work – the work of preventing disease, optimizing performance, extending the years of human life that feel like life – barely existed as a profession. You ate what your family ate. You moved as much as your job required. You slept until the alarm. And when something broke, you went to a doctor.

That is not the world anymore.

In the last decade, something that almost no one predicted happened in plain sight. The infrastructure of self-knowledge fell into ordinary people's hands. A continuous glucose monitor costs less than a dinner. A wearable on the wrist tracks the architecture of your sleep. Lab panels that used to require a referral can be ordered online. Genetic data, microbiome data, hormone panels, VO_2 max, HRV, body composition – the signals that used to live behind a clinic's walls now live on a phone. And alongside that flood of signal, an entirely new profession formed: people who could read it.

Personal trainers became performance specialists. Nutritionists became metabolic coaches. RNs left the hospital floor to build cash-pay practices. GLP-1 protocols, longevity programs, functional medicine, recovery science, sleep coaching, mindset coaching – work that used to sit at the edges of "healthcare" walked into the center of how millions of people actually take care of themselves. The proactive practitioner became, for an enormous and growing number of clients, the person they see first, most often, and most willingly.

And almost no one built the tools for that practitioner.

What got built instead was a strange archipelago. A scheduling tool that thinks it's an EMR. An EMR that thinks it's a CRM. A messaging app that pretends to be HIPAA-compliant. A nutrition platform that doesn't talk to the wearable platform. A billing tool that doesn't talk to anything. The proactive coach – the person whose entire job is to integrate signal across a life – has been forced to integrate it across twelve tabs, by hand, at night, for free.

We have spent enough time talking to these practitioners to be certain of three

things.

The first is that they are extraordinary at the work. The depth of pattern-matching a good coach develops across hundreds of clients is not a thing software replaces. It is a thing software should support.

The second is that they are drowning. The average solo proactive practitioner loses something on the order of eighteen hours a week to administrative friction. Forms that get re-typed. Check-ins that get copy-pasted. Lab PDFs that get manually transcribed. Programs that get re-written from scratch for every client because the protocol engine that should have personalized them does not exist.

The third is that they will not be drowning much longer, because the technology that ends this is now here.

Agentic AI – software that does not just answer when asked, but acts on your behalf across systems with judgment – has crossed the line from demo to deployment. It can read the lab. It can draft the check-in. It can spot the trend across four wearables. It can write the recap. It can do the work that used to require a back office, on behalf of a single practitioner, twenty-four hours a day, in the practitioner's own voice. The unit economics of a proactive health practice are about to change permanently, and the practitioners who get the leverage first will define the shape of the field for a decade.

Xenios exists to make sure the leverage lands with them.

We are building an AI-native operating system for proactive and preventive health practitioners. Not a notes app with a chatbot bolted on the side. Not a scheduling tool that learned to summarize. An operating system, in the original sense of the word: the substrate that handles the coordination, memory, and execution of the work, so that the practitioner's attention can stay where it should always have been – on the human in front of them.

We are deliberately broad about who that practitioner is. Personal trainers. Registered dietitians. GLP-1 coaches. Longevity specialists. Functional medicine practitioners. Sleep and recovery experts. Performance scientists. RNs running cash-pay clinics. Health coaches. Wellness professionals. Anyone whose job is to keep a person well, optimize how they perform, and extend the years that feel worth extending. The unifying frame is not the credential. It is the orientation: upstream of disease, alongside the client, accountable to outcomes the client can feel.

We are building it with a specific intellectual posture, and the posture matters.

We believe the practitioner's judgment is the thing the software should defer to, not replace. The agent's job is to surface, structure, draft, and execute – never to diagnose, prescribe, or substitute. Where lines exist between coaching and clinical practice, we will respect them with the precision of people who have spent years building inside regulated healthcare systems. We have shipped infrastructure that the US healthcare system actually adopted, more than once. We know what production-grade looks like when the data is sensitive and the stakes are real.

We believe the client's data belongs to the client. Portability is not a marketing claim; it is a primitive. If a practitioner leaves Xenios, their work leaves with them. If a client wants their record, they get it. The lock-in we are interested in is the lock-in of being too useful to leave, not the lock-in of holding the keys.

We believe small teams of practitioners can now run what used to require entire clinics, and that the right software collapses the gap between a solo coach and a system. The leverage we are building is for the independent operator first. The enterprise comes later, on the same rails, when the rails are obviously the best ones.

We believe the next decade decides the shape of preventive care for the next fifty years. The infrastructure that gets built between now and 2030 – the data models, the agentic patterns, the consent regimes, the interoperability layers – becomes the rails for everything that follows. We intend for those rails to be built by people who understand both the engineering and the clinical reality, who will not cut corners on either, and who will hand the leverage to the practitioner instead of pulling it toward themselves.

We are not in a hurry to be loud. We are in a hurry to be right.

The team building this has done it before. Prior healthcare-infrastructure work is responsible for more than \$710M in combined enterprise outcomes, including the build-outs behind FinDox and InstaMed. We have written boring layers underneath payments, compliance, and clinical data exchange – the layers that look invisible right up until they are missing. We are bringing that standard to a category that has never had it: the proactive practitioner's daily workspace.

If you are a coach, a trainer, a dietitian, a longevity specialist, a functional medicine practitioner, a performance scientist, a recovery expert, a health coach, an independent RN – if you are anyone whose work is to keep people well – we want to hear from you. We are onboarding the first practices quietly, in small numbers, with a great deal of care. The waitlist is real. The conversations are real. The leverage is coming.

The next era of proactive health will not be built by people who accepted the tools they were handed.

It will be built by the practitioners. The platform is you. We are just here to make the platform finally feel like one.

– The team at Xenios. Austin, Texas. 2026.

<title>

About – Xenios

Meta description

Xenios is a small, deliberate team building the operating system for proactive and preventive health practitioners. Based in Austin, Texas.

OG image concept Bone preset. Display-md: A SMALL TEAM. A LONG VIEW.

Header

Eyebrow:

ABOUT · STEALTH · AUSTIN, TX

H1:

A small team. A long view.

Lead:

We are a founding team of operators, engineers, and clinicians who have spent our careers in the parts of healthcare that nobody writes essays about – the data layers, the payments layers, the compliance layers, the boring infrastructure that the rest of the system quietly runs on. We are using everything we learned there to build the thing we have always wanted: an operating system for the practitioners working upstream of disease.

Aggregate credentials (no names, no photos)

H2:

What we have done before.

Body:

Prior healthcare-infrastructure work from members of this founding team is responsible for more than \$710M in combined enterprise outcomes – including the build-outs behind FinDox (clinical document exchange and regulated data infrastructure) and InstaMed (healthcare payments infrastructure acquired by JPMorgan Chase).

Across the team, we bring:

- Two decades of experience shipping HIPAA-grade infrastructure into US healthcare systems
- Deep engineering background across distributed systems, applied ML, and agentic AI
- Hands-on clinical informatics and product leadership across payer, provider, and consumer-health environments
- Years of operating and advising in early-stage proactive-health and longevity businesses
- A track record of building boring layers correctly the first time

H2:

Why we are stealth.

Body:

We are talking to a small, careful number of practitioners. We are not interested in a launch arc that prioritizes attention over fit. The team's names, faces, and individual histories will be public when it is the right moment for the company – and not a day earlier. If you want to know more before that, get in touch.

H2:

Where we are.

Body:

We are based in Austin, Texas. We hire remotely with a strong preference for people willing to spend meaningful time in person here. We are small on purpose and intend to stay that way for a while.

CTAs:

Careers – Xenios

Meta description

Help us build the operating system for proactive health. Founding roles, remote with Austin preferred.

OG image concept Forge preset (dark, orange mist). Display-md: [BUILD THE OS. FROM AUSTIN.](#)

Header

Eyebrow:

H1:

We are hiring quietly. We are hiring carefully. We are hiring now.

Lead:

Every founding hire shapes the first version of the company. We are looking for a small number of unusually good people who want to build the operating system for proactive health from day one. All roles are remote with a strong preference for in-person time in Austin. Apply by emailing team@xeniostechology.com with anything you'd like us to see – code, work, a paragraph about why this. No formal application. No bots. A person reads everything.

Section eyebrow above role list:

OPEN ROLES – REMOTE / AUSTIN PREFERRED

Role cards (5 roles)

Role 1 — Voltage preset

- Eyebrow: ENGINEERING
- H3: Founding Senior Software Engineer
- Body:

You will write the spine of the product. Modern TypeScript, Next.js, Postgres, agentic LLM patterns, event-driven systems. You have shipped real software into production under real load. You care about the experience the same way you care about the code. You are happy to do whatever the moment requires.

- Apply line: Apply → team@xeniostechology.com (subject: Founding Engineer)

Role 2 — Voltage preset

- Eyebrow: ENGINEERING
- H3: Founding Product Engineer
- Body:

You live where design and engineering meet. You build the interfaces practitioners actually want to use, you make them feel inevitable, and you ship them. Strong TypeScript, strong taste, comfort sitting next to a designer and a coach in the same week.

- Apply line: [Apply → team@xenios technology.com \(subject: Product Engineer\)](#)

Role 3 — Forge preset (dark)

- Eyebrow: [AI / ML](#)
- H3: [Founding AI / ML Engineer](#)
- Body:

You will design the agentic systems at the heart of Xenios — retrieval, planning, evaluation, guardrails, and the production patterns that make agents trustworthy in regulated environments. You have shipped LLM products under real constraints, not just demos. Bonus: applied experience in clinical, biosignal, or health data domains.

- Apply line: [Apply → team@xenios technology.com \(subject: AI/ML Engineer\)](#)

Role 4 — Aurora preset

- Eyebrow: [DESIGN](#)
- H3: [Founding UI / UX Designer](#)
- Body:

You will define how Xenios feels. Information density without anxiety. Editorial confidence. Motion that earns its existence. You are comfortable owning the design system end-to-end and prototyping in code or close to it. Show us work where the craft is obvious.

- Apply line: [Apply → team@xenios technology.com \(subject: Designer\)](#)

Role 5 — Ember preset

- Eyebrow: [GO-TO-MARKET](#)
- H3: [Founding Coach Partnerships Lead](#)
- Body:

You will be the bridge between the team and the practitioners we serve. You know this world from the inside – you have either been a coach, sold to coaches, or built community around them. You can run a thousand careful conversations, hold a roadmap of feedback in your head, and turn the first hundred relationships into the foundation of a category.

- Apply line: [Apply → team@xenios technology.com \(subject: Coach Partnerships\)](#)

How we work

H2:

How we work.

Body:

Remote with deep in-person time in Austin. Small headcount on purpose. Direct communication, written defaults, no theater. Equity for everyone. Health, dental, vision. We expect you to do the best work of your career here and we expect to earn it.

Don't see your role?

H3:

Don't see yourself in the list?

Body:

If you would be useful to Xenios and we have not posted the role yet, write anyway. We read every email. team@xenios technology.com.

3.6 FAQ — [/faq](#)

<title>

FAQ — Xenios

Meta description

Common questions about Xenios – the operating system for proactive health practitioners.

OG image concept Bone preset. Display-md: QUESTIONS, ANSWERED.

Header

Eyebrow:

FAQ

H1:

The questions we get most.

14 Q&A pairs

Q: What is Xenios?

A: An AI-native operating system for proactive and preventive health practitioners – coaches, trainers, nutritionists, performance specialists, longevity coaches, functional medicine practitioners, RNs and RDs in cash-pay practice, and everyone else doing the upstream work of keeping people well.

Q: Who is Xenios for, exactly?

A: Any practitioner whose job is to keep someone well, optimize how they perform, or extend the years that feel like life. The credential matters less than the orientation: upstream of disease, alongside the client, accountable to outcomes.

Q: Is Xenios a replacement for an EMR?

A: No, and that is on purpose. EMRs are built for the moment something has gone wrong. Xenios is built for everything that happens before that – and is designed to play nicely with the clinical system when it needs to.

Q: How is Xenios different from coaching apps that already exist?

A: Most existing tools are scheduling tools with extra tabs. Xenios is an operating system: a unified client profile, a protocol engine that personalizes itself, and an agent layer that takes the administrative weight off the practitioner. We are building infrastructure, not features.

Q: Will the agent diagnose or prescribe?

A: No. The agent surfaces, structures, drafts, and executes. Judgment stays with the practitioner. Where lines exist between coaching and clinical practice, we will respect them with the precision of people who have spent years inside regulated healthcare.

Q: Is it HIPAA-compliant?

A: Xenios is being built HIPAA-ready from day one, US-hosted, encrypted at rest and in transit, with a SOC 2 roadmap. See /security for current posture.

Q: Who owns the data?

A: The client owns their data. The practitioner owns their practice's data. Portability is a primitive. If you leave Xenios, your work leaves with you.

Q: How much will Xenios cost?

A: Pricing will be announced ahead of general availability. It will be priced for the independent practitioner first – meaning sustainable for a solo operator, not just for enterprise.

Q: When can I use it?

A: We are onboarding waitlist practitioners in small waves. Join the waitlist and

we will reach out when your wave opens.

Q: Where is Xenios based?

A: Austin, Texas. We hire remotely with a strong preference for in-person time in Austin.

Q: Who is on the team?

A: The founding team's prior healthcare-infrastructure work is responsible for more than \$710M in combined enterprise outcomes, including the build-outs behind FinDox and InstaMed. We will share names and faces publicly when it is right for the company.

Q: Are you fundraising?

A: We will say more about capital at the appropriate moment. If you are a fund whose thesis lives in proactive health, longevity, or applied AI infrastructure, write to team@xeniostechology.com.

Q: Will Xenios integrate with wearables and labs?

A: Yes. Integration with the dominant wearable ecosystems, lab providers, and continuous-monitoring devices is part of the core surface, not a side feature.

Q: How do I get in touch?

A: One inbox: team@xeniostechology.com. A human reads every message.

3.7 Security — </security>

<title>

Security & data — Xenios

Meta description

How Xenios handles security, privacy, and HIPAA-grade health data.

OG image concept Voltage preset. Display-md: [BUILT FOR SENSITIVE DATA.](#)

Header

Eyebrow:

H1:

Built for sensitive data from the first commit.

Lead:

The founding team has spent careers building production infrastructure inside US healthcare. We are bringing that standard to Xenios from day one – not retrofitting it later.

Sections

H2: [Our posture](#)

Xenios is being built HIPAA-ready: BAA-eligible architecture, US-hosted infrastructure, encryption at rest and in transit, audit logging across all access to protected health information, and least-privilege access controls enforced at every layer. SOC 2 Type II is on the roadmap and will be pursued ahead of general availability.

H2: [Where data lives](#)

Application data is hosted on US regions of leading cloud infrastructure providers. Protected health information is logically and physically separated from non-PHI service data. Backups are encrypted, versioned, and tested.

H2: [Who can see what](#)

Access to production systems is restricted to a small number of authorized engineers, gated by hardware-key MFA, time-bounded, and fully audited. No customer support workflow grants standing access to PHI.

H2: [How we handle vendors](#)

Every vendor that touches PHI is reviewed for HIPAA eligibility and signs a BAA. The list of subprocessors will be published and kept current.

H2: [What you own](#)

The client owns their data. The practitioner owns their practice's data. Both can export their data at any time. If Xenios ever ceases to exist, your data will not go with it.

H2: [Reporting a vulnerability](#)

Security researchers and any user who notices something concerning can email us at team@xeniostechnology.com with the subject "Security." We respond personally. We do not punish good-faith disclosure.

CTA: [Contact us → team@xeniostechnology.com](#)

3.8 Terms — [/terms](#)

<title>

Terms of service — Xenios

Meta description

The terms governing your use of xeniostechnology.com and any Xenios product.

Boilerplate intro

H1:

Terms of service.

Eyebrow:

LAST UPDATED — MAY 2026

Body (placeholder boilerplate — replace with counsel-reviewed final before launch):

These Terms of Service ("Terms") govern your access to and use of the websites, products, and services offered by Xenios Technologies, Inc. ("Xenios," "we," "our," or "us"). By accessing or using any Xenios product or this website, you agree to be bound by these Terms.

Xenios provides software-based tools designed to support proactive and preventive health practitioners. Xenios does not provide medical advice, diagnosis, or treatment. Nothing surfaced by the Xenios product is a substitute for the independent judgment of a qualified healthcare provider.

You may use the Xenios services only in compliance with these Terms and all applicable laws. You will not misuse the services, attempt to disrupt them, or use them to handle data that is not lawfully yours to handle.

Xenios may modify, suspend, or discontinue the services at any time. We will give reasonable notice when we can.

Xenios is provided "as is," to the extent permitted by law. To the maximum extent allowed, Xenios disclaims all warranties not expressly stated in a separate written agreement.

These Terms are governed by the laws of the State of Texas, without regard to its conflict-of-laws provisions. Any dispute will be resolved in the state or federal courts located in Travis County, Texas.

For questions about these Terms, contact us at team@xenios technology.com.

Note for legal: The boilerplate above is a placeholder. Counsel must finalize before public launch, including arbitration clause, limitation of liability, indemnification, and acceptable use policy.

3.9 Privacy — </privacy>

<title>

Privacy policy – Xenios

Meta description

How Xenios collects, uses, and protects information about you and your practice.

Boilerplate intro

H1:

Privacy policy.

Eyebrow:

LAST UPDATED – MAY 2026

Body:

This Privacy Policy describes how Xenios Technologies, Inc. ("Xenios," "we," "our," or "us") collects, uses, and protects information when you visit xeniostechnology.com or use a Xenios product.

What we collect. When you join the waitlist, you provide us with your email address, your role, optional details about your practice, and any message you choose to share. When you visit the website, we collect minimal, privacy-respecting analytics – page views, country-level geography, and the link that referred you – using a cookieless analytics provider. We do not run advertising trackers.

How we use it. We use waitlist information solely to contact you about Xenios, evaluate fit for early access, and share updates relevant to proactive-health practitioners. We use website analytics to understand which pages are useful and which are not.

Who we share it with. We do not sell your data. We share it only with subprocessors strictly necessary to operate the service – email delivery, hosting, error monitoring – each under a written agreement that reflects our standards.

Protected health information. When Xenios begins handling protected health information for practitioners and their clients, that data will be governed by a Business Associate Agreement and the practices described on [/security](#).

Your rights. You may request access to, correction of, or deletion of your information at any time by emailing team@xeniostechnology.com. You may unsubscribe from any Xenios email with one click.

Children. Xenios is not intended for use by children under 13. We do not knowingly collect information from children under 13.

Changes. We will update this policy as the product evolves. The "last updated" date above will always reflect the current version.

Contact. Privacy questions: team@xeniostechnology.com.

Note for legal: Counsel must finalize before public launch, including CCPA/CPRA, GDPR (if applicable), and the full subprocessor list.

PART 4 — TRANSACTIONAL EMAILS

Both emails are sent via Resend on the `xeniostechology.com` domain. Plain text alternatives are required.

4.1 Confirmation email to the signup

From: `Xenios <team@xeniostechology.com>` **Reply-To:** `team@xeniostechology.com`
Subject: `You're on the list. Welcome to Xenios.` **Preheader:** `A short note about what you just joined – and what's coming next.`

Body:

Hi –

You just joined the Xenios waitlist. We are glad you did.

A short note about what you've stepped into:

We are building the operating system for proactive and preventive health practitioners – the people working upstream of disease, alongside their clients, every day. An AI-native workspace that takes the administrative weight off your hands, holds the full picture of every client you serve, and stays out of the way of the human work that only you can do.

We are not in a hurry to be loud. We are in a hurry to be right. The product is being built carefully, with practitioners we trust, in small waves. You are now on the very short list of people we will be talking to as those waves open.

Your position on the waitlist: #[position] of [count]
(That number updates live on the site.)

While you wait, two small asks:

→ Follow @officialxenios on Instagram: <https://www.instagram.com/officialxenios/>
→ Follow us on LinkedIn: <https://www.linkedin.com/company/officialxenios>

That is where the early signals will appear first.

If anything you want us to know didn't fit in the form, just reply to this email. A human reads every reply.

– The team at Xenios
Austin, Texas

PART 5 — TECHNICAL IMPLEMENTATION

5.1 Recommended stack

Layer	Choice	Reason
Framework	Next.js 14 (App Router)	Server actions, edge runtime, ISR
Hosting	Vercel (Pro)	Edge network, function timeouts (60s), preview deploys, OG runtime
Database	Postgres on Neon	Serverless, branching, free tier for prototyping, US East region
ORM	Drizzle	Lightweight, edge-compatible reads

Layer	Choice	Reason
Email	Resend	Modern API, React Email templates, deliverability defaults
Auth (v3)	Clerk or Supabase Auth	Magic-link first, MFA on by default
Analytics	Plausible (self-host optional) or Vercel Analytics	Cookieless, GDPR-safe
OG images	<code>@vercel/og</code> (Edge runtime)	Build-time + dynamic
Monitoring	Sentry + Vercel Observability	Error + perf
DNS	Cloudflare (DNS only) → Vercel (origin)	Fast propagation, DMARC reporting

5.2 Database schema (waitlist)

sql

```

create extension if not exists "pgcrypto";
create extension if not exists "citext";

create table waitlist (
  id          uuid primary key default gen_random_uuid(),
  email       citext not null unique,
  role        text not null,
  practice_name text,
  team_size   text not null,
  clients_active text not null,
  tools_today text,
  message     text,
  consent     boolean not null default false,
  position    bigserial,                -- auto-increment, public posi
  source      text,                    -- utm_source
  referrer    text,
  country     char(2),
  ip_hash     bytea,                  -- SHA-256(ip + salt), no raw
  created_at  timestamptz not null default now(),
  confirmed_at timestamptz
);

create index waitlist_created_idx on waitlist (created_at desc);
create index waitlist_role_idx   on waitlist (role);

-- Counter offset: we seed the public count at 550 even though the table starts empty
create table waitlist_offset (
  id      int primary key default 1,
  value   bigint not null default 550,
  check (id = 1)
);
insert into waitlist_offset (id, value) values (1, 550) on conflict do nothing;

-- Public count view:
create or replace view waitlist_count as
  select (select count(*) from waitlist) + (select value from waitlist_offset where

```

Why a separate offset row: it makes the seed visible and adjustable from the database without code changes, and the public count is always $\text{real_signups} + 550$. The user's actual position shown in the confirmation email is $\text{offset_value} + \text{their_row_position}$ so the experience feels continuous.

5.3 Live counter — implementation

Approach: client polling with edge-cached GET, with SSE as a defer-able upgrade.

Why polling beats SSE here:

- A waitlist counter ticks rarely (seconds-to-minutes), so a long-lived stream wastes compute.
- Vercel's function timeout (10s Hobby / 60s Pro) makes SSE expensive at scale. Medium
- A GET that is edge-cached for 5 seconds across all visitors costs effectively zero.

GET endpoint — `/api/waitlist/count/route.ts`

```
ts

// app/api/waitlist/count/route.ts
import { NextResponse } from "next/server";
import { db } from "@lib/db";

export const runtime = "edge";
export const revalidate = 5; // 5-second edge cache

export async function GET() {
  const rows = await db.execute<{ count: number }>(
    `select count from waitlist_count`
  );
  const count = Number(rows[0]?.count ?? 550);

  return NextResponse.json(
    { count },
    {
      headers: {
        "Cache-Control": "public, s-maxage=5, stale-while-revalidate=30",
        "CDN-Cache-Control": "public, s-maxage=5",
      },
    }
  );
}
```

Client hook

```
ts
```

```
// hooks/use-waitlist-count.ts
"use client";
import { useEffect, useState } from "react";

export function useWaitlistCount(initial = 550) {
  const [count, setCount] = useState(initial);

  useEffect(() => {
    let alive = true;
    let timer: ReturnType<typeof setTimeout>;

    const tick = async () => {
      try {
        const res = await fetch("/api/waitlist/count", { cache: "no-store" });
        if (!res.ok) return;
        const { count: c } = await res.json();
        if (alive && typeof c === "number") setCount(c);
      } catch {}
      timer = setTimeout(tick, 7000); // 7s poll
    };

    tick();
    return () => { alive = false; clearTimeout(timer); };
  }, []);

  return count;
}
```

Poll cadence: 7s (slightly off integer-second so multiple tabs don't sync). Edge cache is 5s, so the origin DB is touched roughly once every 5 seconds globally regardless of traffic.

Optional SSE upgrade (defer to post-launch if Pro plan isn't yet provisioned):

```
ts
```

```

// app/api/waitlist/stream/route.ts
export const runtime = "nodejs";
export const dynamic = "force-dynamic";

export async function GET() {
  const encoder = new TextEncoder();
  const stream = new ReadableStream({
    async start(controller) {
      const send = (count: number) =>
        controller.enqueue(encoder.encode(`event: count\ndata: ${count}\n\n`));

      // Initial value
      const initial = await getCount();
      send(initial);

      // Poll DB every 5s for up to 55s, then close (client reconnects)
      const start = Date.now();
      const interval = setInterval(async () => {
        send(await getCount());
        if (Date.now() - start > 55_000) {
          clearInterval(interval);
          controller.close();
        }
      }, 5_000);
    },
  });

  return new Response(stream, {
    headers: {
      "Content-Type": "text/event-stream; charset=utf-8",
      "Cache-Control": "no-cache, no-transform",
      Connection: "keep-alive",
    },
  });
}

```

The client auto-reconnects via `EventSource`, so the 55-second cycle is invisible. Use SSE only if real-time-tick UX is required and Pro plan is in place.

Counter UI animation: when `count` increases, animate the changed digit positions only (compare digit strings, animate per-position).

5.4 Waitlist API design

Endpoint: `POST /api/waitlist`

Validation (Zod):

```
ts

import { z } from "zod";

export const WaitlistSchema = z.object({
  email: z.string().email().max(254).toLowerCase().trim(),
  role: z.enum([
    "personal_trainer", "nutritionist", "glp1_coach",
    "longevity_specialist", "functional_medicine", "health_coach",

  website: z.string().max(0).optional(),
});
```

Handler (sketch):

```
ts
```

```

// app/api/waitlist/route.ts
export const runtime = "nodejs"; // need full Node for email + DB writes
export const dynamic = "force-dynamic";

export async function POST(req: Request) {
  // 1. Rate limit by IP (Upstash Ratelimit): 5 per 10 min per IP
  const ip = req.headers.get("x-forwarded-for")?.split(",")[0] ?? "0.0.0.0";
  const rl = await ratelimit.limit(`waitlist:${ip}`);
  if (!rl.success) return json({ error: "rate_limited" }, 429);

  // 2. Parse + validate
  const body = await req.json();
  const parsed = WaitlistSchema.safeParse(body);
  if (!parsed.success) return json({ error: "invalid", issues: parsed.error.issues });
  if (parsed.data.website) return json({ ok: true }, 200); // honeypot – silent accept

  // 3. Insert (idempotent on email)
  const country = req.headers.get("x-vercel-ip-country") ?? null;
  const ipHash = await sha256(`${ip}${process.env.IP_SALT}`);
  const row = await db.transaction(async (tx) => {
    const existing = await tx.query.waitlist.findFirst({ where: eq(waitlist.email, parsed.data.email) });
    if (existing) return existing;
    const [inserted] = await tx.insert(waitlist).values({
      ...parsed.data,
      country,
      ip_hash: ipHash,
      referrer: req.headers.get("referrer"),
      source: new URL(req.url).searchParams.get("utm_source"),
    }).returning();
    return inserted;
  });

  // 4. Compute position + count (offset-aware)
  const { count } = await getCount();
  const position = (await getOffsetValue()) + row.position;

  // 5. Send emails (parallel, do not block on failure)
  await Promise.allSettled([
    sendConfirmation(row.email, { position, count }),
    sendInternalNotification(row, { position, count }),
  ]);

  // 6. Return position

```

```
return json({ ok: true, position, count }, 200);
}
```

Dedupe: unique index on `email` (citext). Reattempts return 200 with the existing position — the user gets the same "we'll be in touch" success state. The confirmation email is **not** resent on duplicate (check `confirmed_at`).

Rate limiting: Upstash Ratelimit, fixed-window 5 requests / 10 minutes per IP, plus a global ceiling of 60/min to absorb spikes.

Bot protection: invisible honeypot field `website` + Cloudflare Turnstile on the form (lightweight, no friction). Reject submissions with `Turnstile` token failure.

5.5 Email delivery (Resend)

Domain config (DNS records to add on `xeniosotechnology.com`):

Type	Name	Value	Purpose
MX	<code>send</code>	10 feedback-smtp.us-east-1.amazonses.com	Resend sending subdomain
TXT	<code>send</code>	<code>v=spf1 include:amazonses.com ~all</code>	SPF
TXT	<code>resend._domainkey</code>	(DKIM key provided by Resend dashboard)	DKIM
TXT	<code>_dmarc</code>	<code>v=DMARC1; p=quarantine; rua=mailto:dmarc@xeniosotechnology.com; ruf=mailto:dmarc@xeniosotechnology.com; fo=1; aspf=s; adkim=s; pct=100</code>	DMARC
TXT	<code>@</code>	(existing SPF for primary apex mail, if any)	Apex SPF
MX (apex)	<code>@</code>	(your inbound provider — Google Workspace if used)	Receiving

Notes:

- `From` uses the apex `team@xeniosotechnology.com` while sending occurs through Resend on the `send` subdomain. This is the modern best practice (apex receives, subdomain sends).

- Start DMARC at `p=none` for 7 days, monitor reports, then move to `p=quarantine`, then `p=reject` after 30 days clean.
- Set up an inbox or alias for `dmarc@xeniosotechnology.com` for aggregate reports.

Templates: React Email components, one for confirmation and one for internal notification, rendered on demand via Resend SDK.

5.6 Analytics

Choice: Plausible (cloud or self-hosted) — cookieless, GDPR-friendly, no consent banner required in most jurisdictions.

Events to track:

Event	Trigger
<code>pageview</code>	Default
<code>cta_click_hero_waitlist</code>	Hero primary CTA
<code>cta_click_manifesto_read</code>	Hero secondary CTA
<code>waitlist_form_view</code>	<code>/waitlist</code> mount
<code>waitlist_submit</code>	Form submit (success only)
<code>waitlist_error</code>	Form submit (error)
<code>nav_click_[label]</code>	Top-nav link
<code>social_click_[network]</code>	Footer social link

Set up goals for `waitlist_submit` so conversion rate per source is visible.

5.7 SEO meta strategy

- One canonical `<link rel="canonical">` per page.
- All `<title>` tags ≤ 60 chars, all meta descriptions ≤ 158 chars.
- Open Graph + Twitter Card on every page with a page-specific OG image.
- Structured data: `Organization` schema on `/`, `FAQPage` schema on `/faq`, `WebSite` schema with `SearchAction` (no search yet, can be added).
- `sitemap.xml` auto-generated by Next.js from the route table.
- `robots.txt`:

```
User-agent: *
Allow: /
Disallow: /app
Disallow: /api
Sitemap: https://xeniostechology.com/sitemap.xml
```

5.8 OG image template (@vercel/og)

A single edge route renders OG images per page. Each page passes `title`, `eyebrow`, and optional `preset` (one of the six gradients). Template:

```
tsx
// app/og/route.tsx
export const runtime = "edge";
export async function GET(req: Request) {
  const { searchParams } = new URL(req.url);
  const title = searchParams.get("title") ?? "xenios.";
  const eyebrow = searchParams.get("eyebrow") ?? "PRE-SEED · AUSTIN, TX";
  const preset = (searchParams.get("preset") ?? "bone") as Preset;

  return new ImageResponse(
    (
      <div style={{ display: "flex", flexDirection: "column", justifyContent: "space-between", width: "100%", height: "100%", padding: 64, background: PRESETS[preset].base, color: PRESETS[preset].fg, fontFamily: "PP Neue Montreal" }}>
        <div style={{ display: "flex", justifyContent: "space-between", fontSize: 20 }}>
          <span>xenios.</span><span>{eyebrow}</span>
        </div>
        <div style={{ fontSize: 110, lineHeight: 0.9, letterSpacing: "-0.03em", fontTextTransform: "uppercase", maxWidth: 1000 }}>{title}</div>
      </div>
    ),
    { width: 1200, height: 630 }
  );
}
```

Each page's `<head>` references `/og?title=...&eyebrow=...&preset=...`. Build-time fonts can be loaded with `fetch()` and passed to `ImageResponse` via `fonts: [...]`.

For the homepage and waitlist page, build a variant that fetches the current count and renders it into the OG image — but **bake an ISR revalidate of 60s** so social platforms get a fresh-ish number without hammering the function on every crawl.

5.9 Required legal pages

`/terms` and `/privacy` are live at launch (boilerplate above, counsel-reviewed before public announcement). `/security` is content-only at launch and grows once SOC 2 work begins. A `/subprocessors` page will be added when the first BAA is signed.

5.10 Migration path off Replit hosting

1. Export the current Replit project as a git repository (or `replit-archive` if available); commit to a new private GitHub repo `xeniosotechnology/web`.
 2. Re-init as a Next.js 14 App Router project locally; bring across any existing copy and assets, but rebuild structure from this spec (most prior code will not survive the visual redesign).
 3. Provision Neon Postgres (US East), apply the schema from §5.2.
 4. Provision Resend, verify the `xeniosotechnology.com` sending domain, configure DNS per §5.5.
 5. Provision Vercel project; connect GitHub repo; set env vars (`DATABASE_URL`, `RESEND_API_KEY`, `IP_SALT`, `UPSTASH_REDIS_REST_URL`, `UPSTASH_REDIS_REST_TOKEN`, `TURNSTILE_SECRET`).
 6. Add the domain on Vercel. Update DNS at Cloudflare:
 - `A` apex → Vercel anycast IP (or `CNAME` flattening to `cname.vercel-dns.com`).
 - `CNAME www` → `cname.vercel-dns.com`.
 7. Deploy to a preview URL, verify all flows end-to-end (signup, dedupe, emails arrive, counter ticks).
 8. Cut DNS to production. Decommission the Replit deployment.
 9. Set up health monitoring (Vercel Observability + Sentry).
 10. Remove Replit secrets and rotate any credentials that touched the old environment.
-

PART 6 — LAUNCH SEQUENCE & CHECKLIST

6.1 v1 must-ship (two-week sprint)

Week 1 — foundations

- ☐ GitHub repo + Next.js 14 scaffold
- ☐ Vercel project + custom domain wired

- ☐ Neon Postgres + schema applied + seed offset row at 550
- ☐ Resend domain verified (SPF, DKIM, DMARC at `p=none`)
- ☐ Cloudflare Turnstile keys
- ☐ Upstash Ratelimit configured
- ☐ Design system tokens implemented (CSS variables, font loading, six gradient presets)
- ☐ Core components built (Nav, Footer, Button, Input, Card, Counter)
- ☐ OG image route live with @vercel/og
- ☐ Homepage copy and layout shipped
- ☐ Waitlist page + form + API + emails end-to-end

Week 2 — content, polish, ship

- ☐ Manifesto page typeset + reviewed
- ☐ About, Careers (5 roles), FAQ, Security pages
- ☐ Terms + Privacy boilerplate (placeholder pending counsel)
- ☐ Plausible analytics installed + goals configured
- ☐ Live counter polling verified across browsers
- ☐ Confirmation + internal emails reviewed in inbox previewers (Litmus / EmailOnAcid optional)
- ☐ Mobile QA on iPhone + Android, both Safari and Chrome
- ☐ Lighthouse: Performance ≥ 95 , Accessibility ≥ 95 , Best Practices ≥ 95 , SEO ≥ 95
- ☐ axe-core accessibility scan passes
- ☐ All forms keyboard-navigable, visible focus rings
- ☐ DMARC moved from `p=none` to `p=quarantine` once reports are clean
- ☐ Backup/restore test on Neon
- ☐ Replit deployment decommissioned
- ☐ Soft-launch to founders' personal networks, monitor for 48 hours
- ☐ Public-ish launch (LinkedIn + Instagram coordinated post)

6.2 v2 deferred (30–60 days post-launch)

- ☐ `/research` brief field notes (3–5 short essays from coach interviews, no client names)
- ☐ `/changelog` public build log
- ☐ `/press` press kit (logo pack, one-line description, single point of contact)
- ☐ `/partners` page for wearable / lab integration partners
- ☐ SSE upgrade for the live counter (replace polling)
- ☐ DMARC moved to `p=reject`
- ☐ SOC 2 Type I prep kickoff
- ☐ Resend → dedicated IP if volume justifies
- ☐ OG counter rendering for social shares

6.3 v3 private beta (60-120 days)

- ☐ Auth provider (Clerk or Supabase Auth) integrated
- ☐ Magic-link invite flow at `/invite/[token]`
- ☐ `/app` shell behind auth
- ☐ First version of the Coach console for invited practitioners
- ☐ BAA template ready, first vendor BAAs signed
- ☐ Subprocessors page published
- ☐ PHI handling audit logging live and tested
- ☐ First wave invited (≤ 25 practices)
- ☐ Weekly feedback cadence with private-beta cohort

6.4 Operational readiness checklist (pre-launch)

Item	Owner	Done
Domain registrar locked, 2FA on registrar	Eng	☐
DNS at Cloudflare, DNSSEC enabled	Eng	☐
SSL — Vercel-issued cert verified	Eng	☐
<code>team@xenios technology . com</code> receives mail (Google Workspace or equivalent)	Eng	☐
Email auth — SPF, DKIM, DMARC live and aligned	Eng	☐
Test send to inbox at Gmail / Outlook / Apple / ProtonMail — all land in inbox, not spam	Eng	☐
Waitlist confirmation email reviewed by team for tone and accuracy	Team	☐
Internal notification email reaches <code>team@</code> and <code>Reply-To</code> works	Eng	☐
Live counter shows ≥ 550 on first paint, polls correctly	Eng	☐
Honeypot + Turnstile reject obvious bot traffic	Eng	☐
Rate limit returns 429 at threshold and recovers	Eng	☐
Sentry receiving errors from a synthetic throw	Eng	☐
Plausible receiving pageviews from a private session	Eng	☐
<code>/robots . txt</code> , <code>/sitemap . xml</code> , all canonical tags correct	Eng	☐
Open Graph preview verified on LinkedIn Post Inspector + Twitter Card Validator	Eng	☐

Item	Owner	Done
Mobile viewport meta and safe-area insets verified on iPhone notch + Dynamic Island	Eng	☐
Reduced-motion preference disables drifting gradients	Eng	☐
Color contrast AAA on body, AA on display where unavoidable	Design	☐
Terms + Privacy reviewed by counsel before public push	Legal	☐
Press / inbound contact response SLA agreed (24 hours)	Team	☐

Closing note for the designer & developer

Everything above is meant to be lifted. The copy is final-ready, the tokens are paste-ready, the schema is apply-ready, the email templates are send-ready. The only things deliberately left open are (a) legal text on `/terms` and `/privacy`, which must be replaced by counsel-finalized versions before public push, and (b) brand-licensed fonts, which require a Pangram Pangram or CoType license purchase before production deployment. Everything else is ready to ship.

If something is ambiguous, the rule is: choose the option that feels more inevitable. That is the standard we want the site held to.

— End of specification.
