

PART 2 — XENIOS TECHNOLOGIES WEBSITE REBUILD SPEC

Pre-seed, stealth-ish, Austin TX. AI-native operating system for health coaches, trainers, nutritionists, and performance specialists. Vision: put a coach in every client's pocket. Constraint: every word below is shippable copy. **Zero team-member names anywhere.**

2.A Sitemap & Information Architecture

v1 (must ship at launch)

Route	Purpose	Audience	Funnel role
/	Hero, thesis, product preview, waitlist CTA	All visitors	Top-of-funnel + conversion
/manifesto	Long-form thesis	Believers, founders, press	Brand conviction
/waitlist	Dedicated form page (also embedded on /)	Coaches, trainers, clients, investors	Primary conversion
/about	Anonymized team teaser (NO NAMES)	Press, investors, prospective hires	Trust + credibility
/careers	Open roles + apply-via-email	Engineers, designers	Recruiting
/faq	10+ Q&A pairs (also collapsible on /)	Skeptical visitors	Objection handling
/privacy	Standard privacy policy	Required	Legal
/terms	Standard ToS	Required	Legal
/security	HIPAA-readiness, encryption, data handling	Coaches (mandatory), enterprise	Trust

v2 (post-launch, when there's material)

Route	Defer reason
/product	Wait until private beta product UI is screenshot-ready
/for-coaches	Wait until at least 3 design partner coaches are signed
/for-clients	Lower priority — coach acquisition is upstream

Route	Defer reason
<code>/blog</code>	Wait until 4+ posts are written; empty blogs harm trust
<code>/press</code>	Wait until first earned media hit
<code>/changelog</code>	Ships with product beta (Q2 2026)

v3 (private beta launch, Q2 2026)

- Login subdomain (`app.xenios technology.com`)
- Documentation / API reference if API ships
- Customer stories (replaces anonymized social proof on `/`)

2.B Page-by-Page Copy (Verbatim)

2.B.1 GLOBAL CHROME

Top ribbon (homepage only, dismissible):

Now raising pre-seed. Coaches & investors → join the waitlist.

Navigation bar (sticky, 72px tall on desktop, 60px mobile):

- Logo (left): `xenios` (lowercase wordmark, optional small mark/glyph to the left)
- Center links (desktop only, hidden on mobile, hamburger replaces): `Manifesto` · `About` · `Careers` · `FAQ`
- Right CTA (primary button): `Join waitlist` → opens `/waitlist` or scrolls to inline form

Mobile nav drawer order: Manifesto / About / Careers / FAQ / Join waitlist (CTA full-width at bottom).

Footer (4 columns + legal row):

- **Company:** Manifesto · About · Careers · Contact (`mailto:hello@xenios technology.com`)
- **Product:** For coaches · For clients · FAQ · Security
- **Resources:** Waitlist · Press · Blog (when live)
- **Legal:** Terms · Privacy · Security & HIPAA
- **Social row:** LinkedIn (`/company/xenios-technology`) · X (`@xenios tech`) — stealth, no founder personal accounts
- **Copyright:** © 2026 Xenios Technologies, Inc. Austin, TX.

- **Disclosure microcopy (tiny, gray):** Xenios is not a medical device. Not a substitute for licensed medical or clinical care.

2.B.2 HOMEPAGE — (/) — Full Top-to-Bottom Scroll

<title>:

Xenios — The AI-native operating system for health coaches

Meta description:

Xenios gives coaches, trainers, and nutritionists an AI-native operating system to run their practice — so one coach can serve hundreds of clients with the depth of one-on-one care. Join the waitlist.

OG image concept: Deep-ink background (■ #0A0E14), a single line of cream serif text reading *"Put a coach in every client's pocket."*, the wordmark xenios lowercase in the bottom-left, a faint orange dot accent in the top-right. 1200×630. Built as a reusable template — same composition for every page, only the headline swaps.

Section 1 — Hero

Eyebrow (small caps, signal-orange, tracked):

PRE-SEED · AUSTIN, TX

H1 (display serif, ~88px desktop / 48px mobile, tight tracking):

Put a coach in every
client's pocket.

(Force the line break before "client's pocket" — the cadence matters.)

Subhead (body sans, ~22px, max-width ~640px):

Most coaches cap out at 40 clients. Xenios is the AI-native operating system that lets one coach run a practice of hundreds — without losing the depth of one-on-one care.

Primary CTA: [Join the waitlist →](#) (signal-orange fill, ink text, full pill) **Secondary CTA:** [Read the manifesto](#) (ghost / underlined link to [/manifesto](#))

Supporting microcopy (tiny, beneath CTAs):

No spam. Occasional updates. Potential early access for design-partner coaches.

Product mockup concept (right column on desktop, below CTA on mobile): A floating, slightly tilted, code-editor-meets-iMessage UI mock — a coach's dashboard on the left showing a client roster of ~12 names (initials-only avatars), and on the right an "agent thread" panel showing an AI agent drafting a personalized check-in to a client. Render it as a Figma export, not a real screenshot, until the product ships. Use deep-ink chrome, signal-orange status pills, JetBrains Mono for any code/timestamps, Inter Tight for UI labels.

Section 2 — Metrics Strip

A single horizontal row, 4 columns, white background, deep-ink text, large display serif numbers, small Inter Tight labels.

40	710M	6M+	~1
Clients the average human coach can serve well.	Prior exits by Xenios's founding team across healthcare infrastructure companies.	U.S. health coaches, trainers, and nutritionists.	Coaches per hundred clients in the current model.

Microcopy below strip (right-aligned, tiny):

Sources: IHRSA 2024, NASM coach census, internal estimates. Founder exit figure aggregates prior outcomes including FinDox and InstaMed.

Section 3 — Thesis Teaser ("Why now")

Section eyebrow:

THE THESIS

H2:

Three forces are colliding. Coaching is about to change forever.

Lede:

GLP-1s reshaped metabolic health. Wearables made every body legible. And LLMs finally made it possible to deliver coaching-grade reasoning at the cost of a text message. The coaches who win the next decade won't be the ones who work harder. They'll be the ones with an operating system that works for them.

3 cards (equal-width, deep-ink fill, cream text, hairline border in `--hairline-orange`):

Card 1

01 / GLP-1 changed the assignment.
Sixty percent of new coaching clients arrive on a metabolic medication. Coaches now need to understand pharmacology, lab trends, and side-effect timelines – not just programming and macros.

Card 2

02 / Wearables made the data ambient.
Oura, WHOOP, Apple Watch, Dexcom, Levels – every client now generates more biometric data per day than a 2010 cardiologist saw per patient per year. Coaches don't need more data. They need a system that reads it for them.

Card 3

03 / LLMs collapsed the coaching ratio.
A well-tuned agent can draft a personalized check-in, flag a trend, and surface the right intervention in under a second. The 1:40 coach-to-client cap is a software problem now. We're solving it.

Section 4 — How it Works (4 steps)

Section eyebrow: `THE PRODUCT` **H2:** `One operating system. Four moving parts.` **Lede:**

`Xenios sits between your clients' wearables, your knowledge, and the messages you'd send if you had infinite time.`

Step 01 — Ingest

Connect every signal your client generates.

Wearables, labs, food logs, training apps, calendars. Xenios pulls in every stream a client produces and normalizes it into one timeline you can read in ten seconds.

Step 02 — Reason

Your protocols. Our reasoning layer.

You define the playbook – training principles, nutrition philosophy, the questions you always ask. Xenios's agents apply it to every client, every day, at scale, in your voice.

Step 03 — Act

Drafts every message you'd send. You approve.

Daily check-ins, weekly summaries, "you seemed off today" nudges, program adjustments. Xenios drafts them. You review, edit, send – or set auto-send for clients you trust the system with.

Step 04 — Compound

Every interaction makes the next one sharper.

Xenios remembers what worked for which client, what didn't, and what your best clients have in common. Your practice gets better the more you use it.

Section 5 — Product Feature Deep-dives (3 features)

Feature 1 — The Roster

Eyebrow: **ROSTER** **H3:** See every client at a glance. Know who needs you today. **Body:**

A single dashboard shows you every client's last 14 days at a glance – recovery, training adherence, mood, weight, glucose, anything you care about. Xenios surfaces the three clients who need you most today and tells you why.

Bullets:

- Auto-sorted by "needs attention" score

- Color-coded trends for each metric you set
- One-click jump into a client's full timeline and agent thread
- Filter by program phase, life event, or custom tag

Mockup concept: Dark dashboard, 12 client rows, each row a sparkline strip + a "Today" status pill (**At risk** in signal-orange, **Steady** in muted cream, **Crushing it** in cool green). Top of view: "3 clients need you today" banner.

Feature 2 — Agent Threads

Eyebrow: **AGENT** **H3:** **An AI co-pilot per client. In your voice. Always.** **Body:**

Every client has a dedicated agent that knows their full history, your protocols, and the way you talk. It drafts every check-in, every program adjustment, every "hey, I noticed your sleep dipped this week" message – for you to review and send.

Bullets:

- Trained on your written voice (upload past messages or coach in real-time)
- Knows every protocol document you've ever written
- Flags anything outside your scope (mental health, medical) for human-only response
- Auto-sends only with your explicit per-client permission

Mockup concept: Split view — left side a client's full data timeline, right side a chat thread with the agent's drafted message highlighted in signal-orange with three buttons: **Send as-is**, **Edit**, **Regenerate**.

Feature 3 — Protocol Studio

Eyebrow: **PROTOCOLS** **H3:** **Your playbook, structured. Applied to everyone, instantly.** **Body:**

Stop copy-pasting program templates. Define each protocol once – training, nutrition, recovery, supplementation, GLP-1 titration – and Xenios applies it to every client it fits, personalizes it to their data, and updates it as they progress.

Bullets:

- Markdown-native — write protocols the way you already do

- Version control: every protocol has a history; you can A/B and compare
- Branching logic for life events (travel, injury, surgery, pregnancy, medication change)
- Shareable with team members (for multi-coach practices)

Mockup concept: A protocol document on the left in a monospace editor style, the same protocol rendered as a personalized week-view for a specific client on the right.

Section 6 — Audience Split

Section eyebrow: WHO IT'S FOR **H2:** Built for coaches. Felt by clients.

Card A — For Coaches

For coaches, trainers, and nutritionists.

You spent ten years getting good. You're capped at 40 clients. You write the same check-in fifty times a week. Your DMs are a graveyard.

Xenios is your operating system. It runs the practice you'd run if you had a team of ten. Without hiring a team of ten.

CTA: Join the coach waitlist →

Card B — For Clients

For people working with a coach.

You hired a coach because you wanted someone who knows you. You don't want an AI coach. You want your coach, available more often, paying closer attention.

That's what Xenios does for them. So you get more of them.

CTA: Tell your coach about Xenios → (opens prefilled email / share modal)

Section 7 — Social Proof / Trust Signals (pre-customer-logo era)

Section eyebrow: TRUST **H2:** Built by operators who've shipped healthcare infrastructure before.

Three trust signals laid out as a flat row, no logos, no headshots, no names.

\$710M+

in prior exits across the founding team – in healthcare infrastructure, payments, and document automation.

Signal 2

2 prior healthcare exits

including FinDox and InstaMed (acquired by JPMorgan Chase). The same playbook for trust, security, and clinical-grade reliability is being applied here.

Signal 3

Now raising pre-seed.

We're talking to a small, focused group of investors who understand AI infrastructure, healthcare distribution, and operator-coded products. If that's you, reach us at investors@xenios technology.com.

Microcopy below:

Customer testimonials and design partner logos coming as we onboard the first cohort in Q2 2026.

Section 8 — Team Teaser (Anonymized)

Section eyebrow: THE TEAM **H2:** A small team. A long résumé.

Xenios is being built in Austin, Texas, by a founding team whose previous companies have been acquired for a combined \$710M+ across healthcare payments and document infrastructure – including FinDox and InstaMed.

The team's prior experience spans clinical workflow software, payments infrastructure used by hundreds of thousands of providers, AI/ML engineering at scale, and operator roles inside high-growth healthcare startups.

We're staying lean and heads-down until the product is in coaches' hands. No headshots yet. The work is the proof.

CTA: (links to)

Section 9 — Final CTA

H2 (large display serif, centered):

The next ten years of coaching get built now.
Want a seat?

Body (centered, max-width 560px):

2.B.3 MANIFESTO —

The Xenios Manifesto – Put a coach in every client's pocket.

Meta description:

OG image concept: Deep ink. Single cream serif line: *"Put a coach in every client's pocket."*
Wordmark and small orange dot.

H1 (display serif, very large, left-aligned):

Put a coach
in every client's
pocket.

Subhead:

The Xenios manifesto, 2026.

The Problem

Forty.

That's how many clients the average human coach can serve well. Push past that and something breaks – usually the client.

The math has been the same for fifty years. A great coach can hold maybe forty people in their head: who's deloading, who's traveling, who just started a GLP-1, who slept three hours, who's about to quit. Past forty, the depth collapses into a group chat and a Notion doc.

Meanwhile, the demand for coaching has never been higher.

Six million Americans work with a paid health coach, trainer, or nutritionist today. Tens of millions more should be – but can't, because there aren't enough coaches, and the ones who exist can't take more clients.

Coaching, as a profession, has been priced like therapy and scaled like a barbershop. Brilliant practitioners stuck running tiny businesses. Clients who could be transformed left scrolling through TikTok for advice.

This is the problem.

The Mission

We are building an operating system for coaches.

Not an AI coach. Not a chatbot that replaces them. The opposite – an AI-native software stack that lets one excellent human coach run a practice of hundreds without losing the depth of one-on-one care.

The agent reads the wearable data. The agent drafts the check-in. The agent flags the client who slept four hours and skipped breakfast and probably needs a phone call today. The agent remembers everything the coach has ever said about anyone.

The coach makes the calls. The coach holds the relationship. The coach is the brand.

The agent does the work of the team the coach has never been able to afford.

The Why Now

Three things have changed in the last twenty-four months.

GLP-1s changed the assignment. Sixty percent of new clients arrive on a metabolic medication. Coaches now need to understand pharmacology, lab trends, side-effect timelines, and titration schedules. The job got harder.

Wearables made every body legible. Continuous glucose, continuous heart rate, sleep staging, recovery scores, menstrual phase, training load. Every client now produces more biometric data per day than a 2010 cardiologist saw per patient per year. The signal got louder.

And LLMs finally made it cheap to read it all. A well-tuned reasoning model can hold a client's full history in context, apply a coach's protocol, and draft a personalized response – for less than the cost of an SMS. The tool got real.

Pick any two. The third arrives soon. All three at once, right now, for the first time. This is the window. It will close.

The Vision

In ten years, every serious coach will work this way.

They will start their day with a roster view that tells them which three clients need them today and why. They will spend the rest of the day on the phone, in person, or in a high-touch message – being a coach, doing the part of the job no software can do.

Every check-in their clients receive will read like the coach wrote it themselves. Most of them won't have been written by the coach personally. They will all have been written by an agent the coach trained, in the coach's voice, with the coach's protocols, on the coach's data – and approved by the coach before sending. That distinction will matter to a few purists in 2026 and to no one by 2030.

The result: the same human coach you would have hired in 2024 will, in 2030, run a hundred-client practice with the depth of a forty-client practice. Their revenue triples. Their burnout drops. The number of people in the world who get to work with a real coach goes from six million to sixty million.

This is what we mean by "put a coach in every client's pocket."

Not an AI in every client's pocket.

A real coach. Amplified.

The Goal

Sixty million people working with a coach by 2035.

One coach per hundred clients, at the depth of one per forty.

Zero coaches lost to burnout because the software wouldn't let them scale.

Every person on a GLP-1 with a coach who actually knows what to do. Every person with a wearable who has someone reading it. Every coach with a real business instead of a glorified hobby.

That's the goal.

Join Us

This is not a tracking app. Not a wellness app. Not a chatbot. Not an AI coach.

This is the software the next generation of coaches will run their practice on.

If you're a coach who feels capped – join the waitlist. We're choosing twenty design-partner practices for our Q2 2026 private beta.

If you're a client who wishes your coach had more of themselves to give – tell them about us.

If you're an investor, an engineer, or a designer who wants to build this with us – find the right link in this site and reach out.

The next ten years of coaching get built now.

We'd like you in.

– The Xenios team

2.B.4 WAITLIST PAGE — </waitlist>

By submitting, you agree to receive occasional email updates from Xenios Technologies. We don't sell, share, or rent your information to anyone. Ever.

Validation / error states:

- Empty email: We'll need an email to get back to you.

- Invalid email format: `That email doesn't look right – mind double-checking?`
- Empty role field: `Pick whichever's closest. "Other" is fine.`
- Server error: `Something went sideways on our end. Try once more, or email hello@xenios technology.com.`

Success state (replaces form in-place):

You're in.

We'll be in touch as we get closer to opening the beta. In the meantime, the manifesto is the best way to know what we're doing and why.

[[Read the manifesto](#) →]

2.B.5 WAITLIST CONFIRMATION EMAIL (sent within 60 seconds of signup)

From: `Xenios <hello@xenios technology.com>` **Subject:** `You're on the Xenios list.`

Preheader: `Here's what to expect, what we're building, and how to get involved early.`

Body (plaintext-friendly, no images, minimal styling):

Hey,

You just joined the Xenios waitlist. Thanks for that.

Here's the short version of what you signed up for:

We're building Xenios – an AI-native operating system for health coaches, trainers, and nutritionists. The thesis: one great coach should be able to serve hundreds of clients with the depth of one-on-one care. The software to make that possible doesn't exist yet. So we're building it.

What you'll get from us:

- A short update every 4-6 weeks. Not more.
- A first look at the product before public launch (Q2 2026 private beta).
- Direct line to the team – just reply to any email.

What we won't do:

- Sell or share your email.
- Send marketing spam.
- Pretend we're further along than we are.

If you're a coach: we're hand-picking 20 design-partner practices for the private beta. Reply to this email with a sentence about your practice and you'll move to the top of the list.

If you're an investor: we're raising pre-seed. Reach us at investors@xeniotechnology.com.

If you're an engineer or designer who wants to help build this: see careers, then email careers@xeniotechnology.com.

The manifesto, if you haven't read it: <https://xeniotechnology.com/manifesto>

– The Xenios team

Xenios Technologies, Inc. · Austin, TX

2.B.6 FAQ PAGE — (/faq) (also collapsible accordion on homepage at (/#faq))

<title>: Xenios FAQ – common questions, answered **H1:** Frequently asked. **Subhead:** If you have a question we haven't answered, email hello@xenios technology.com.

Q1 — What is Xenios?

Xenios is an AI-native operating system for health coaches, trainers, nutritionists, and performance specialists. It connects every signal a client generates – wearables, labs, food logs, training apps, calendars – and gives the coach a single dashboard, an AI agent per client trained in the coach's voice, and a protocol library that scales their best work across their entire roster.

Q2 — When does it launch?

We're targeting a private beta with ~20 design-partner coaching practices in Q2 2026. Public launch follows once the beta cohort is producing measurable client outcomes. The waitlist is how we choose who gets in first.

Q3 — Who is Xenios for?

Primarily: coaches, trainers, nutritionists, performance staff, and small coaching practices (1-10 coaches) who already have a working business and feel capped by the 1:40 ratio. Secondarily: solo practitioners adding their first AI tool, and larger coaching companies that need infrastructure rather than another point solution.

It is not (yet) a direct-to-consumer app. Clients interact with their coach through Xenios – they don't sign up for Xenios.

Q4 — How is this different from Trainerize, TrueCoach, or Future?

Trainerize and TrueCoach are workflow tools – calendar, programming, messaging, billing. They are excellent at the things they do. They were also designed before LLMs were useful. They do not reason about a client's data, draft messages in the coach's voice, or flag the three clients who need attention today.

Future is the opposite trade – a great human coach delivered through an app, but priced and staffed at the same 1:40 ratio every other coaching company is stuck at.

Xenios is the missing layer: the AI-native operating system that sits underneath the workflow tools and lets one human coach do the work of a team.

Q5 — Will Xenios replace coaches?

No. The whole company is built on the opposite bet.

The thing we believe is that the relationship a great coach has with a client is the most valuable thing in the entire stack – and the part AI is worst at. The pieces AI is good at – reading wearable data, drafting consistent check-ins, remembering everything, applying a protocol across a roster – are the pieces that currently burn coaches out and cap their practice at forty clients.

Xenios automates those. It does not replace the coach. It removes everything getting between the coach and being a coach.

Q6 — What about HIPAA?

We are building Xenios HIPAA-ready from day one. Encryption at rest and in transit, audited access logs, business associate agreements available for any practice that needs one, and a security & compliance page at /security with the specifics.

For coaches working with clinical clients (e.g., a coach embedded in a longevity clinic), Xenios is being designed to meet the standard a covered entity would expect.

Q7 — How much will it cost?

Q8 — How does the waitlist work?

You join. We send occasional updates. Closer to private beta, we pick ~20 coaching practices to onboard first – chosen for diversity of client type, willingness to give feedback, and whether their practice represents a use case we want to learn from. Everyone else gets early-access invitations as we scale.

Q9 — Are you raising? Can I invest?

Yes – Xenios is raising a pre-seed round right now. If you invest at this stage in AI-native vertical software, healthcare infrastructure, or coaching/creator-economy tools, write to investors@xeniostechology.com with a sentence about your fund and we'll get back to you fast.

Q10 — Where are you based?

Austin, Texas. We're hiring engineers and designers who want to be there with us. See [/careers](#).

Q11 — Why are there no team names on the site?

Because we're heads-down building. The team has a combined \$710M+ in prior healthcare-infrastructure exits – including FinDox and InstaMed – and we will say more about who we are when the product is in coaches' hands. Until then: the work is the proof. If you need to know who's behind this for an investment, partnership, or hire decision, email us and we'll talk directly.

Q12 — Can I reach a human?

Yes. hello@xeniostechology.com gets to a founder. We answer every email.

2.B.7 ABOUT — (/about) (Stealth Version, NO NAMES)

<title>: About Xenios — the team behind the operating system for coaches **Meta**
description: Xenios is built by a team with \$710M+ in prior healthcare-
infrastructure exits, headquartered in Austin, Texas.

H1:

A small team. A long résumé.

Lede (set in display serif at ~28px):

We've shipped infrastructure software that handles millions of healthcare interactions a day. We're doing it again. This time for the people who actually move human health forward — coaches.

Section 1 — The Background

Xenios Technologies, Inc. is being built in Austin, Texas by a founding team whose prior companies have been acquired for a combined \$710M+ in the healthcare infrastructure space — including FinDox and InstaMed (acquired by JPMorgan Chase in 2019).

The team's prior experience spans:

- Clinical and healthcare payments infrastructure used by hundreds of thousands of U.S. providers
- Document-automation software embedded in clinical and financial workflows
- Applied AI and machine learning at production scale
- Operator roles inside multiple high-growth healthcare and fintech startups
- Coaching, performance training, and metabolic-health practice (as both operators and clients)

The thesis driving Xenios — that one excellent coach should be able to serve hundreds of clients with one-on-one depth, and that AI-native infrastructure is the missing piece — comes directly from that résumé.

Section 2 — Why We're Stealth-ish

We've chosen to keep the team behind the wordmark, for now.

Two reasons.

First: the product matters more than the founders. When the private beta opens in Q2 2026, the proof will be the practices we run on Xenios – not the LinkedIn profiles of the people building it.

Second: healthcare is full of demo-ware and AI-flavored marketing. We'd rather show up with a working operating system in twenty coaching practices than a press release.

If you need to know who's behind this – to invest, to partner, to join – write to us. We'll talk directly.

Section 3 — Where We Are

Austin, Texas.

We're hiring on the ground here. The careers page is the best place to start. Investors, design-partner coaches, and journalists can reach us at the addresses below.

investors@xeniostechnology.com

press@xeniostechnology.com

hello@xeniostechnology.com

careers@xeniostechnology.com

Closing CTA block:

Want to help build this?

[See open roles →] (links to /careers)

2.B.8 CAREERS — </careers>

<title>: Careers at Xenios – open roles in Austin, TX **Meta description:** Founding-team roles open at Xenios Technologies in Austin, TX. Software engineering, design, and fractional advisory.

H1:

Help us build it.

Lede:

We're hiring a small founding team in Austin, Texas. If you've ever wanted to ship something where every line of code, every pixel, and every interaction with a coach materially changes the shape of an industry – this is that.

Section — How we hire:

We move fast and we read every application. Email the role you're interested in to careers@xeniostechology.com with three things: a one-paragraph note on why this, links to one or two pieces of work you're proudest of, and your résumé or LinkedIn. We respond inside 72 hours.

We are hiring in-person in Austin, TX. We sponsor relocation for the right person. We do not currently sponsor visas.

Open roles (each as a stacked card):

Role 1

Founding Senior Software Engineer
Full-time · Austin, TX (on-site)

You'll be one of the first engineers building the Xenios platform end-to-end – from the agent reasoning layer, to the data ingestion pipelines connecting Oura/WH00P/Apple Health/Dexcom/Levels, to the coach-facing dashboard, to the messaging infrastructure that delivers an LLM-drafted check-in to a client's iMessage.

We're looking for: 5+ years shipping production software, fluency in modern TypeScript and Python, comfort with LLM tooling (Anthropic, OpenAI, agent frameworks), and the kind of engineer who reads a product spec and immediately starts asking the right questions about edge cases and abuse vectors.

Bonus: prior experience in healthcare, fintech, or any regulated-data environment. Prior experience working closely with a designer and founder. Prior experience being the second or third engineer at a company.

[Apply: careers@xeniostechology.com]

Role 2

Founding UI/UX Designer

Full-time · Austin, TX (on-site)

You will own the Xenios product surface end-to-end – the coach's dashboard, the agent threads, the protocol studio, the client-facing messages, and every onboarding flow in between. The product needs to feel like a tool, not a chatbot. Like something an operator earns the right to use, not something marketed at them.

We're looking for: a designer who has shipped real product (not portfolio decks), strong opinions about information density, type, and motion, fluency in Figma + at least one prototyping tool, and an instinct for how operators actually work day-to-day.

Bonus: prior experience in B2B software, healthcare, fintech, or coaching/creator tools. A point of view on the difference between an "AI feature" and an "AI-native product."

[Apply: careers@xeniostechology.com]

Role 3

Fractional CTO / Technical Advisor

Part-time · Remote-friendly with quarterly Austin visits

For the right operator – someone who has built and scaled engineering teams inside a healthcare or AI infrastructure company – we're open to a fractional CTO or senior technical advisor relationship for the first 12 months.

We're looking for: prior CTO or VP Engineering experience at a company that shipped real product in regulated software, a network we can pull from for early hires, and the judgment to keep us out of architecture mistakes we'd otherwise spend a year unwinding.

This role includes meaningful equity, a clear time commitment, and direct collaboration with the founding team.

[Inquire: careers@xeniostechology.com]

Bottom of page CTA:

Don't see your role? If you'd be a great fit for Xenios in a role that's not listed, write to us. We make exceptions for exceptional people.

[careers@xenios technology.com]

2.B.9 SECURITY & HIPAA — [/security](#)

<title>: [Security & HIPAA at Xenios](#) **Meta description:** [How Xenios handles client health data: encryption, access controls, BAA availability, and HIPAA-readiness.](#)

H1:

We're treating client health data the way we'd want ours treated.

Body:

Xenios is being built HIPAA-ready from day one. We have not yet operated long enough to claim a SOC 2 Type II report or a multi-year audit trail – but the foundational practices are in place and the third-party attestation work begins ahead of the private beta in Q2 2026.

What we do today:

- All data encrypted in transit (TLS 1.2+) and at rest (AES-256).
- Strict role-based access control. No engineer touches production client data without a logged audit event.
- Health data segregated from operational data.
- Vendors who process protected health information are required to sign a BAA before integration.
- For coaching practices that need a BAA with us, we can sign one – write to security@xenios technology.com.

What's coming:

- SOC 2 Type I attestation ahead of public launch.
- Penetration testing by an independent firm in advance of private beta.
- Public bug bounty.
- Full transparency report on data residency, retention, and deletion practices.

We'll never sell client data. We'll never train shared models on identifiable client data. We'll never use a client's information to advertise to them, their coach, or anyone else.

If a coach leaves Xenios, they take a clean export of their roster, protocols, and message history with them.

2.B.10 TERMS & PRIVACY — [/terms](#) and [/privacy](#)

These are standard legal documents and should be drafted by counsel before launch. The marketing site copy required:

[/terms](#) **H1:** [Terms of Service](#) [/terms](#) **lede:** [Effective \[date\]. These terms govern your use of xenios technology.com and any Xenios products you access. If you are using Xenios on behalf of a coaching practice or organization, you confirm you have authority to bind that organization to these terms.](#)

[/privacy](#) **H1:** [Privacy Policy](#) [/privacy](#) **lede:** [Effective \[date\]. This policy describes what data Xenios Technologies, Inc. collects, how we use it, who we share it with \(a short list\), and how you can request access, correction, or deletion.](#)

Both documents should explicitly call out:

- Waitlist data handling (email only, used for product updates, never sold)
- Cookie policy (minimal — analytics only, no advertising trackers)
- California/Virginia/Colorado privacy rights
- HIPAA cross-reference for product (not marketing site)

Design treatment: same nav and footer as the rest of the site, but body type drops to `body-m` and line-length tightens (max 65ch). No imagery, no accent blocks, no animation. Boring on purpose.

2.C Design System Specification for Xenios

The Xenios aesthetic is **Editorial-Technical**: sharper, more confident, more operator-coded than Miora. Where Miora reads like an open letter, Xenios reads like a well-typeset technical paper that happens to have conviction.

2.C.1 Color Palette

Token	Hex	RGB	Role
<code>--deep-ink</code>	 <code>#0A0E14</code>	<code>(10, 14, 20)</code>	Primary background, primary text on light
<code>--paper</code>	 <code>#F4F1EA</code>	<code>(244, 241, 234)</code>	Secondary background, paper-coded sections
<code>--paper-elevated</code>	 <code>#FAF8F2</code>	<code>(250, 248, 242)</code>	Cards on paper bg
<code>--cream</code>	 <code>#EFEAE0</code>	<code>(239, 234, 224)</code>	Subtle differentiation
<code>--signal-orange</code>	 <code>#FF5A1F</code>	<code>(255, 90, 31)</code>	Primary accent, CTAs, status pills, eyebrow text
<code>--orange-hover</code>	 <code>#E64A14</code>	<code>(230, 74, 20)</code>	Hover state for orange
<code>--mono-50</code>	 <code>#FFFFFF</code>	—	Pure white (rare, used only for ink-card text)
<code>--mono-100</code>	 <code>#E8E4DA</code>	<code>(232, 228, 218)</code>	Muted text on deep ink

Token	Hex	RGB	Role
--mono-300	 #7A7468	(122, 116, 104)	Secondary text, captions
--mono-500	 #3D3935	(61, 57, 53)	Body text on paper
--success	 #3FAE6A	(63, 174, 106)	Cool sage-green; "Steady" / "Crushing it" status
--warning	 #F5C453	(245, 196, 83)	Caution states
--danger	 #E04848	(224, 72, 72)	Error / "at risk" status
--hairline	 #D9D2C5	(217, 210, 197)	1px dividers on paper
--hairline-ink	 #1F242C	(31, 36, 44)	1px dividers on deep ink

2.C.2 Typography Scale

Families:

- **Display:** `Fraunces` (700/900, optical-size enabled, soft variant) — H1, manifesto, marquee numbers
- **Body / UI:** `Inter Tight` (400/500/600/700) — all body, navigation, buttons, forms
- **Mono:** `JetBrains Mono` (400/500) — code blocks, technical labels, timestamps, eyebrow tags, metric labels

Scale (desktop / mobile, line-height):

Token	Family	Weight	Desktop	Mobile	Line height	Tracking
<code>display-xl</code>	Fraunces	900	96px	56px	1.02	-0.02em
<code>display-l</code> (H1)	Fraunces	700	72px	44px	1.05	-0.015em
<code>display-m</code> (H2)	Fraunces	700	48px	32px	1.1	-0.01em
<code>display-s</code> (H3)	Fraunces	600	32px	24px	1.2	-0.005em
<code>heading</code> (H4)	Inter Tight	600	20px	18px	1.3	0
<code>eyebrow</code>	JetBrains Mono	500	13px	12px	1.4	0.08em (uppercase)
<code>body-l</code>	Inter Tight	400	19px	17px	1.6	0
<code>body-m</code>	Inter Tight	400	16px	15px	1.55	0
<code>body-s</code> (caption)	Inter Tight	400	14px	13px	1.5	0
<code>mono-label</code>	JetBrains Mono	500	13px	12px	1.4	0
<code>button</code>	Inter Tight	600	16px	16px	1	0.005em

Rules:

- Display serif (Fraunces) only for headlines and marquee numerics.
- Eyebrows are ALL CAPS, JetBrains Mono, signal-orange.
- Body never goes above ~70 characters per line.
- Bullet lists use em-dashes (`(-)`) or (`(→)`) arrows, not disc bullets.

2.C.3 Spacing Scale

A strict 4-based scale, exposed as design tokens:

```
--space-1: 4px
--space-2: 8px
--space-3: 12px
--space-4: 16px
--space-5: 24px
--space-6: 32px
--space-7: 48px
--space-8: 64px
--space-9: 96px
--space-10: 128px
--space-11: 192px
```

Section padding: `--space-10` top/bottom desktop, `--space-8` mobile. Card padding: `--space-6`. Form field padding: `--space-4` horizontal, `--space-3` vertical. Component gaps: `--space-5` between cards in a row.

2.C.4 Layout & Grid

- 12-column grid, 1200px max content width, 24px gutters desktop / 16px mobile.
- Side margins: 64px desktop, 24px mobile.
- Breakpoints: `(sm)` 640, `(md)` 768, `(lg)` 1024, `(xl)` 1280, `(2xl)` 1536.
- Section structure: alternating `--paper` and `--deep-ink` backgrounds for tonal rhythm (paper → deep-ink → paper → paper → deep-ink → paper).

2.C.5 Component Library

Buttons:

- Primary: signal-orange fill, deep-ink text, 16px font-weight 600, 14px vertical / 24px horizontal padding, border-radius 8px (slightly rounded, NOT full pill — feels more "tool" than Miora's pill button). Hover: `--orange-hover`. Active: scale 0.98.
- Secondary: deep-ink outline (1px), deep-ink text, transparent fill. Hover: deep-ink fill + cream text.
- Ghost: text-only with `→` arrow, signal-orange or deep-ink, underline on hover.
- Disabled: 40% opacity, no pointer events.

Cards:

- Paper card: `--paper-elevated` fill, 1px `--hairline` border, 16px border-radius, `--space-6` padding.
- Ink card: `--deep-ink` fill, 1px `--hairline-ink` border, 16px border-radius, cream text.

- Hover: subtle 2px Y-lift, slightly tighter shadow.

Forms:

- Input: 1px `--hairline` border, 8px border-radius, `--paper-elevated` fill, 16px font-size, focus state shows 2px signal-orange ring with reduced opacity.
- Labels above inputs in `body-s` weight 500, color `--mono-500`.
- Error states in `--danger` with explanatory text under field.
- Submit button: primary button styling, full-width on mobile, intrinsic-width on desktop.

Navigation:

- Sticky at top, 72px desktop / 60px mobile.
- Background: `--paper` with subtle bottom hairline.
- On scroll past hero: subtle backdrop-blur effect (`backdrop-filter: blur(12px)`).
- CTA button always visible on right.

Footer:

- Background: `--deep-ink`, text in `--mono-100`.
- 4 columns desktop, stacked single column mobile.
- Wordmark at top-left, social icons at bottom row.
- Tall (~480px desktop) to act as an outro.

Status pills (in product UI mocks):

- `At risk`: signal-orange fill, deep-ink text
- `Steady`: cream fill, deep-ink text
- `Crushing it`: success-green fill, deep-ink text

2.C.6 Motion Principles

- **Tone:** Confident, decisive, minimal. No springy bounces. No confetti. No parallax.
- **Page load:** Fade in (200ms) + 8px Y-translation, staggered by 60ms across hero elements.
- **Scroll-in:** `transform: translateY(16px) → 0` + `opacity: 0 → 1`, 400ms `ease-out`, triggered at 20% in-view.
- **Hover:** 150ms ease-out for color, 200ms for transform.
- **Button press:** scale 0.98, 80ms.
- **Cursor:** Default OS cursor. A subtle `pointer` change on interactive elements, but no custom cursor sprite. Operators don't like cursor tricks.

- **Loading states:** Form submission shows a small spinner inside the button (16px, `--mono-100`), and the button text changes from `Save my spot →` to `Saving...`. No full-page loaders, no skeleton screens — pages are static.
- **Page transition:** None at v1 (static pages). Consider view-transitions API for v2.
- **Microinteraction signature:** A single signal-orange dot pulses gently next to the live waitlist counter (if shown) — the only "alive" animation on the site.

2.C.7 Imagery Direction

Allowed:

- Product UI mockups (rendered in Figma, exported as PNG/WebP) — show the product, not lifestyle photos.
- Abstract gradients in the orange-to-deep-ink range as accent textures only — never as primary content.
- Code snippets and JSON examples (in JetBrains Mono on deep-ink card) — to signal "real engineering."
- Agent thread / message UI captures — to make the product tangible without showing a polished demo.
- Schematic diagrams — flowcharts of how Xenios connects to wearable APIs, drawn in monoline strokes.

Banned:

- No stock photos. Especially no Unsplash. Especially no smiling-people-with-laptops.
- No founder headshots (stealth constraint).
- No 3D-rendered abstract blobs (overused in pre-seed AI marketing).
- No emoji as design elements.
- No generic AI illustrations (robots, brains, neural network swirls).

2.C.8 How Xenios Diverges from Miora — At-a-Glance

Dimension	Miora	Xenios
Mood	Warm, poetic, retreat-coded	Confident, technical, operator-coded
Primary background	Cream paper (<code>□ #F5F1EA</code>)	Both: deep-ink hero + paper body
Accent color	Sage-green / blush	Signal-orange (<code>● #FF5A1F</code>)
Display type	Soft humanist serif	High-contrast serif (Fraunces)

Dimension	Miora	Xenios
Body type	Humanist sans	Inter Tight (technical sans)
Use of monospace	None	Yes — eyebrows, labels, mockups
Iconography	None	Minimal — schematic strokes only
Photography	Unsplash lifestyle	None — product mocks only
Top nav	Vestigial (wordmark only)	Full nav with sticky CTA
Primary CTA	"Login", "Contact" (mailto)	"Join waitlist" (real form)
Integration logos	None (text only)	None at v1; logos earned in v3
Testimonials	None	None (yet) — replaced by quantified credibility
Founder photos	Real portrait on /about	None (stealth)
Tone	Letter / manifesto	Technical paper with a thesis
Animation	Soft fades	Soft fades + one orange-dot pulse
Mantra	"Stop deciding, start living."	"Put a coach in every client's pocket."
Button shape	Full pill	8px rounded rectangle
OG image	Universal, one image for all pages	Per-page rendered via <code>@vercel/og</code>

2.D Implementation Notes

Tech Stack Recommendation

Strongly recommended: Next.js 14 on Vercel.

Rationale:

- Next.js + Vercel gives Xenios per-page SEO control (per-page `<title>`, meta description, and dynamically-generated per-page OG images via `@vercel/og`) — Miora's biggest SEO miss is its single shared OG image, which Xenios should fix from day one.
- Server components let you build the waitlist form with edge-deployed server actions and reliable email delivery without standing up a backend.

- Direct integration with Resend (transactional email) and a Postgres / Supabase / Neon database for waitlist storage.
- Vercel edge config makes feature-flag-style toggles trivial (e.g., enabling the `/blog` route when posts are ready).
- Ships in TypeScript by default — matches the founding engineer profile.

Alternative: Framer (if speed-to-launch is the only constraint). Same stack as Miora. Pros: ship in days. Cons: per-page OG control is limited, custom forms require third-party integration, no first-class TypeScript codebase to evolve into the product. Recommended only if v1 must ship in under two weeks.

Not recommended: Astro, Remix, custom stacks. All workable, but Next.js + Vercel is the path of least resistance with the most upside for a team that will eventually ship a real product UI.

Migrate Off Replit Hosting Immediately

Replit is excellent for prototyping. It is not where you host a marketing site for a healthcare-adjacent company raising pre-seed. Reasons to migrate before launch:

1. **Trust signals.** Investors and design-partner coaches will inspect — Replit-served sites have telltale URL patterns and slower TTFB than CDN-served Next.js.
2. **HIPAA posture.** Even though the marketing site is not technically HIPAA-regulated, a security-conscious coach will look at the security page and the underlying infrastructure. Vercel (with a signed BAA available) reads correctly. Replit does not.
3. **Performance.** Vercel's edge network delivers sub-100ms TTFB globally. Replit's free tier cold-starts and serves slowly.
4. **Custom domain reliability.** Vercel auto-provisions SSL, handles `www` ↔ apex redirects, and never goes to sleep.
5. **Future product domain.** When `app.xeniostechology.com` launches, you'll already be on the right platform.

Migration steps: Point `xeniostechology.com` DNS to Vercel; transfer the codebase to a GitHub repo; connect Vercel; ship.

SEO Meta Strategy

- Every page gets a unique `<title>` and `<meta name="description">`.
- Every page gets a unique OG image via `@vercel/og` — use the OG template described in 2.B.2.
- Structured data: JSON-LD `Organization` schema on `/about`, `FAQPage` schema on `/faq`, `WebSite` schema with `SearchAction` on `/`.
- `robots.txt` allows all crawlers, points to `/sitemap.xml`.

- `sitemap.xml` auto-generated by Next.js, regenerated on build.
- Per-page canonical tags.
- Twitter card: `summary_large_image` with the unique OG image.

Open Graph Image Template

Build one Figma template; export per-page via `@vercel/og` at build time:

- 1200×630 canvas
- `--deep-ink` background
- `xenios` wordmark in cream, bottom-left, 56px, lowercase
- Page-specific headline in Fraunces 72/76, cream, centered or left-aligned
- Signal-orange dot (24px) accent in top-right
- Single hairline rule (1px `--hairline-ink`) along the bottom edge

Waitlist Backend

Recommended stack: Resend (transactional email) + Postgres on Neon or Supabase (waitlist storage) + Next.js server actions (form handling). Total cost: \$0–\$20/mo at this stage.

Alternative if speed > customization: ConvertKit (rebranded "Kit") or Beehiiv for waitlist + drip emails. Use only if there's no engineer available for two days of setup.

Avoid: Mailchimp (clunky, expensive at scale), Typeform (introduces a UX seam — embed it well or skip).

Analytics

- **Plausible Analytics** (privacy-respecting, GDPR-friendly, no cookie banner needed) — strongly preferred over GA4 for a privacy-conscious healthcare-adjacent brand.
- Vercel Web Analytics as a free secondary.
- No advertising trackers. No Meta Pixel. No LinkedIn Insight Tag at v1.

Required Legal Pages Before Launch

- `/privacy` — drafted by counsel, references waitlist data handling, CCPA/CPRA/VCDPA compliance.
- `/terms` — drafted by counsel, light at v1 since there's no product yet.
- `/security` — copy as in 2.B.9.
- Cookie consent: a minimal banner only if you choose to use cookies beyond strictly-necessary. With Plausible, you do not.

- Accessibility statement: include a one-paragraph statement on `/privacy` or `/security` confirming AA-target compliance.

Accessibility Targets

- WCAG 2.2 AA at minimum.
 - Contrast ratio: deep-ink on paper, paper on deep-ink, signal-orange on deep-ink — all confirmed $\geq 4.5:1$ for body, $\geq 3:1$ for large text.
 - Full keyboard navigation. Visible focus states (2px signal-orange outline with offset).
 - Form fields have associated `<label>` elements; placeholder is not a label substitute.
 - All imagery includes meaningful `alt` text.
 - Animations respect `prefers-reduced-motion`.
-

2.E Launch Sequence

v1 — Ship in 2 weeks (must-haves)

Page	Status at launch
<code>/</code>	Full homepage as specified
<code>/manifesto</code>	Full manifesto as written
<code>/waitlist</code>	Form live, confirmation email firing
<code>/about</code>	Stealth version, no names
<code>/faq</code>	Q1-Q12 as written
<code>/careers</code>	3 roles open, mailto applications
<code>/security</code>	As written
<code>/privacy</code>	Counsel-drafted
<code>/terms</code>	Counsel-drafted
Footer	Full
Sitemap.xml + robots.txt	Auto-generated
OG image template	Per-page rendered

v1 launch checklist:

- ☐ DNS pointed at Vercel
- ☐ Production deploy from `main` branch
- ☐ Resend domain verified, SPF/DKIM/DMARC records live
- ☐ Waitlist confirmation email tested end-to-end
- ☐ Plausible Analytics installed
- ☐ All functional email addresses live (`hello@`, `investors@`, `press@`, `careers@`, `security@`)
- ☐ Counsel review of `/privacy` and `/terms` complete
- ☐ Accessibility audit (axe DevTools clean run) on every page
- ☐ Lighthouse score 95+ on all pages

v2 — Ship 4-8 weeks after v1

- `/product` page once mockups are demo-ready
- `/for-coaches` audience landing page
- `/blog` with 3-4 initial posts (manifesto excerpts, product philosophy, coaching-economy thesis)
- Press page with first earned-media hits (when they exist)
- Light A/B testing infra on hero headline and CTA copy

v3 — Ship at private beta launch (Q2 2026)

- `app.xeniostechology.com` (the product)
- `/for-clients` (now that there's a product to point at)
- `/customers` (with real design-partner coach quotes)
- Public changelog
- Public security report (SOC 2 Type I attestation, pen-test summary)
- Replace anonymized credibility section on homepage with real customer logos and integration logo strip

v4 — Public launch (H2 2026)

- Remove pre-seed ribbon
- Replace stealth `/about` with named team page
- Pricing page
- Self-serve onboarding
- Integration catalog page

Final Notes for the Designer & Developer

Three things to internalize before you start cutting Figma frames or writing components:

1. Restraint is the design. Miora won by deciding to leave 90% of typical SaaS marketing patterns on the floor. Xenios should do the same, but with a different set of decisions. No stock photos. No testimonial sliders. No animated AI-blob backgrounds. No "trusted by" logo strips with logos at 8% opacity. The site should feel like the team built it themselves over a weekend because they had something specific to say.

2. The headline does the work. Every section above is built around a single sharp headline. Resist the urge to add a third subhead, a tooltip, or an inline explainer. If the headline doesn't land, rewrite the headline. Don't add chrome.

3. The waitlist is the only conversion that matters. Until the product ships, the only thing this site needs to do is convert a curious visitor into an email address with a role attached. Every component, every animation, every layout choice should be evaluated against: *does this make a coach with 30 clients and burnout more likely to enter their email?* If not, cut it.

Ship soon. The window is open right now. It will close.
