PART 1 — Positioning & Replacement Narrative

One-sentence positioning

| xenios is the AI-adjunct operations system for coaches, trainers, and practitioners.

Category-defining line (poster)

| Your business. Your clients. The AI that connects them.

Alternates approved for OG, paid, or press, used only if context demands a tighter pull:

- *Infrastructure for proactive health.*
- *One operating system for the people who keep humans healthy.*

The B2B2C frame, in one paragraph

xenios is the operating system that sits underneath every coach, trainer, and practitioner who delivers proactive health. The coach, trainer, or practitioner is our customer (B2B). They serve their clients, athletes, and patients through xenios (B2C). xenios runs the operations of the whole relationship: intake, programming, check-ins, messaging, education, accountability, billing, and outcomes. The coach keeps the relationship. The AI does the work that would otherwise consume their week.

The legacy-stack-collapse story

Most coaches, trainers, and practitioners run their business on a disconnected stack: one app for programming, one for intake forms, one for the white-label client app, one for in-app messaging, one for billing, one for affiliate links, one for content, and an EMR or notes tool stapled on the side. Nothing talks. Every client interaction is reassembled by hand. The coach is the integration layer.

xenios replaces that stack with one operating system that runs the coach's business and the client's experience from the same source of truth. One inbox. One client record. One agent that drafts in the coach's voice. One pocket coach on the client's phone. One billing rail. One outcomes layer.

This is not another wellness app. This is the operating system that the disconnected stack of programming apps, intake form tools, white-label app builders, in-app messaging platforms, billing platforms, sick-care EMRs, and ad-hoc affiliate setups will collapse into.

The B2B2C "AI-adjunct operations system" framing

Three things, all running on one system:

1. **Your business.** Programs, protocols, content, clients, billing, contracts, retention, outcomes. Everything a coach, trainer, or practitioner runs.
2. **Your clients.** A pocket coach in their hand that knows their program, their data, their goals, and the way you actually talk to them.
3. **The AI that connects them.** The xenios agent on your side and the xenios client agent on theirs, working continuously between sessions so the relationship is never on pause.

That phrase, "**AI-adjunct operations system for coaches, trainers, and practitioners**," is the lead. It must surface in the hero, the meta description, the OG card, and the first 30 seconds of every investor or partner conversation.

Section 3: HERO

The AI-adjunct operations system for

[strength coaches]
[personal trainers]
[online coaches]
[sports performance coaches]
[nutritionists]
[functional medicine doctors]
[longevity clinicians]
[GLP-1 coaches]
[concierge physicians]
[performance labs]
[recovery studios]
[hormone clinics]
[peptide clinics]
[biohacking clinics]
[physical therapists]
[chiropractors]

Your business. Your clients. The AI that connects them.

One operating system that replaces the disconnected stack of programming apps, intake form tools, white-label app builders, in-app messaging, billing platforms, sick-care EMRs, and ad-hoc affiliate setups most coaches and trainers are stuck with today.

[Join the waitlist] [See how it works]

- Live: 550+ coaches, trainers, and practitioners on the waitlist.

Rotating word implementation note: the bracketed word rotates inside a fixed-width pill. The pill width is locked to the widest entry in the rotation, so the line never reflows. Implementation in Part 13.

Section 4: Category-defining poster line

This is not another wellness app.
This is the operating system that runs proactive health.

Section 5: What xenios replaces

THE OLD WAY
A disconnected stack.

Programming app, intake form tool, white-label client app, messaging platform, billing platform, EMR or notes tool, content tool, affiliate link tool, and the spreadsheets in between.

You are the integration layer. Your week is gone.

.....

THE XENIOS WAY

One operating system.

One inbox. One client record. One agent that drafts in your voice. One pocket coach on the client's phone. One billing rail. One outcomes layer.

The relationship is yours. The work, the AI handles.

Visual slot: left card uses a fragmented gradient with eight floating labeled tiles. Right card uses a single unified gradient with a clean stack of four labels. No empty rectangles.

Section 6: The two surfaces

TWO SURFACES. ONE SYSTEM.

The xenios agent for you.	The xenios client agent for them.
Drafts your messages in your voice. Builds your programs. Tracks your clients between sessions.	A pocket coach that knows their program, their data, their goals, and the way you actually talk to them.
Runs your check-ins.	Answers their questions.
Handles your billing.	Holds them accountable.
Surfaces who needs you today and who can wait.	Teaches them the why.
It works because you taught it how you work.	Hands the hard stuff back to you, every time.

Section 7: How it works (plain English)

HOW IT ACTUALLY WORKS

If you have never used an AI tool, start here.

An AI agent is a software helper that can read, write, listen, and act on your behalf. xenios gives you one for your business and one for every client you serve.

.....

On your side (the coach, trainer, or practitioner):

1. You bring your method. Your programs, your protocols, your check-in style, the way you actually talk to clients.
2. xenios learns it once. We call this your voice corpus. It is the thing that makes the agent sound like you, not like a chatbot.
3. The agent does the repetitive parts forever. Draft check-ins, progress notes, program tweaks, weekly summaries, invoices, reminders, content. In your voice. From your data.
4. You stay in charge. Every outbound action waits for your approval, until you tell it not to. You set the autonomy.

.....

On their side (the client, athlete, or patient):

1. They get a pocket coach in the app. It knows their program, their last session, their goals, and the way you coach.
2. It answers in your voice. Form check, food question, sleep score, GLP-1 side effect, missed workout. The agent handles what you would have answered anyway.
3. It hands the hard stuff to you. Anything outside scope, anything clinical, anything that needs a human, the agent routes straight to you with full context.
4. You see everything. Every conversation, every flag, every moment the client engaged. The relationship is yours. The surface area is no longer the problem.

.....

What it does not do.

- It does not replace your judgment.
- It does not prescribe medication.
- It does not act outside the scope you set.
- It does not pretend to be you. The client always knows when the agent is helping and when you are in the room.

[Read the full how-it-works →]

Section 8: Who it's for (25-ICP grid)

WHO IT IS FOR

Strength coaches	Personal trainers	Online coaches
Sports performance	Functional medicine	Longevity clinics
Concierge medicine	Performance labs	Recovery studios
Telemedicine startups	Preventive care	Nutrition companies
Supplement brands	Athlete brands	Corporate wellness
Healthcare systems	Military	Biohacking clinics
Physical therapists	Chiropractors	Hormone clinics
Peptide clinics	Self-insured employers	Elite athletes
Creators	Sports agencies	

If you keep humans healthy, xenios is built for you.

[Find your category →]

Section 9: Ecosystem belt

THE PROACTIVE HEALTH ECOSYSTEM

(Moving marquee, two rows, brand names organized in 18 clusters: wearables, labs, GLP-1, peptides, recovery, performance equipment, nutrition, supplements, education, content, coaching platforms, EHR / EMR adjacency, payments, identity, longevity, sport science, clinical decision support, devices.)

The proactive health stack is exploding. xenios is the connective

tissue that turns it into a working system for coaches, trainers, and practitioners.

[See the full ecosystem →]

Section 10: The team (heritage)

THE TEAM

From the team behind \$710M+ in prior exits, including FinDox and InstaMed.

With contributors and product team members whose prior work spans professional sports, top coaching platforms, leading consumer health brands, and the operations layer of modern healthcare.

Including builders, coaches, and operators with direct lines into the people we are building for. One example: Alex Houston, founder of MetrikosAMS, author of The Output, with a direct line to 2,500+ strength and conditioning coaches across DIII, DI, and pro.

We have built operating systems for industries before.
We are building the one for proactive health now.

[Read about the team →]

Visual slot: cream ground, ink type, a single typographic composition listing prior categories in a tight stack. No headshots. No logos used without explicit clearance.

Section 11: Waitlist CTA

JOIN THE FOUNDING COHORT

The first 1,000 coaches, trainers, and practitioners shape the operating system the rest of the industry will run on.

Founding cohort gets: priority onboarding, founder-direct support, locked-in founding pricing, and a seat in the room when we ship.

- 550+ on the waitlist. Counter updates in real time.

PART 4 — /product (Verbatim Copy)

PRODUCT

The AI-adjunct operations system for coaches, trainers,
and practitioners.

xenios is one operating system that runs your business and
your clients' experience from a single source of truth. It
replaces the disconnected stack most coaches, trainers, and
practitioners are stuck with today.

.....

WHAT IT IS

Your business, your clients, and the AI that connects them, on one rail.

- One client record. Intake, programs, check-ins, messages, notes, outcomes, billing, content history, in one place.
- One agent on your side. Drafts in your voice, builds your programs, runs your operations, surfaces who needs you.
- One agent on their side. A pocket coach that answers their questions, holds them accountable, teaches them the why.
- One billing rail. Subscriptions, packages, one-offs, affiliate splits, all native.
- One outcomes layer. The thing the whole proactive health economy is missing.

.....

WHAT IT REPLACES

The stack most coaches, trainers, and practitioners run today:

- A programming app
- A white-label client app
- An intake form tool
- An in-app messaging platform
- A billing or subscription platform
- A content or course tool
- An affiliate link tool
- A sick-care EMR or a notes doc stapled on the side
- And the spreadsheet you use to make all of them talk

xenios collapses that into one system. The relationship stays yours. The integration work goes away.

.....

CAPABILITIES

Programs and protocols

Build, version, and assign programs. Use your library or ours. The agent adapts blocks to each client and explains the why in your voice.

Intake and onboarding

Smart intake that fills itself from connected devices, labs, and prior history. Clients land ready to work.

Check-ins

Daily, weekly, or on a cadence you define. Agent drafts the reply, you approve, client gets it in your voice.

Messaging

Unified inbox across SMS, in-app, and email. Agent triages, drafts, and flags clinical or out-of-scope items for you.

Education

Auto-curated lessons and content tuned to each client's level, goals, and devices. Your voice, your method.

Billing and commerce

Subscriptions, packages, one-offs, gift cards, affiliate splits, supplement and equipment storefront, all native.

Network and referrals

Refer between coaches, trainers, and practitioners on the network. Bring your roster. Grow without leaving.

Outcomes

Track adherence, progress, retention, and what is actually moving for each client. Report on the work, not the noise.

Care delivery (post-launch)

Optional telemedicine layer for licensed practitioners who want to deliver care inside xenios.

.....

WHO IT IS FOR

Coaches, trainers, and practitioners across 25 categories, from strength coaches and personal trainers to functional medicine clinics, longevity clinics, and concierge physicians.
[See the full list →]

[Join the waitlist] [Read how it works]

PART 5 — /how-it-works (Verbatim Copy)

HOW IT WORKS

A plain-English explainer.

If you have never used ChatGPT, this page is for you.

.....

WHAT IS AN AI AGENT, ACTUALLY?

An AI agent is a software helper that can read, write, listen, and take action on your behalf, the same way a great assistant would. It is not a chatbot you have to babysit. You give it your method, your data, and your standards, and it does the repetitive parts of your week so you can do the parts that actually need you.

xenios gives every coach, trainer, and practitioner one of these helpers for their business. And it gives every client, athlete, or patient one of their own.

.....

THE TWO SURFACES

There are two AI surfaces in xenios.

1. The xenios agent.
Sits on your side of the relationship. Helps you run your business.
2. The xenios client agent.
Sits on their side of the relationship. Helps your clients live the program you built.

You can think of them as two halves of the same operating system, working continuously between sessions so the relationship is never on pause.

.....

YOUR VOICE CORPUS

The single most important thing in xenios is your voice corpus.

A voice corpus is the collection of how you actually communicate with clients. Your tone. Your phrasing. Your check-in cadence. Your favorite cues. Your default progressions. The way you explain a hard concept to a brand new client and the way you explain the same concept to a 15-year veteran.

xenios learns your voice corpus once, from your existing messages, programs, content, and a short onboarding interview. After that, the agent sounds like you, not like a chatbot.

This is the difference between an AI that helps you and an AI that embarrasses you.

.....

AUTONOMY LEVELS

You decide how much the agent does on its own. Three levels:

Level 1. Draft only.

The agent writes everything, you approve everything.
Nothing goes out without you.

Level 2. Approve on exceptions.

The agent sends routine items in your voice. Anything flagged, clinical, billing-related, or off-pattern, waits for you.

Level 3. Full operating.

The agent runs the operations and hands you the exceptions. You spend your week on coaching, not on coordination.

You can set autonomy per client, per workflow, per time of day. You can dial it back at any time. The agent never escalates itself.

.....

WHAT THE AGENT DOES ON YOUR SIDE

- Drafts check-ins, replies, progress notes, weekly summaries.
- Builds and adapts programs from your library.
- Triage the inbox. Surfaces who needs you today.
- Runs invoices, subscriptions, package renewals, refunds.
- Tracks adherence and outcomes. Flags drift early.
- Writes content drafts in your voice for your newsletter, social, or course.

.....

WHAT THE CLIENT AGENT DOES ON THEIR SIDE

- Answers form, food, sleep, recovery, and program questions in your voice.
- Walks them through the day's session, the week's plan, and the why.
- Logs what they tell it and what their devices say, into the same record you see.
- Holds them accountable on the cadence you set.
- Hands the hard stuff back to you with full context, every time.

.....

WHAT IT DOES NOT DO

- It does not replace your judgment.
- It does not prescribe medication.
- It does not diagnose.
- It does not act outside the scope you set.
- It does not pretend to be you. The client always knows when the agent is helping and when you are in the room.
- It does not train on your client data to teach somebody else's model.

.....

PRIVACY AND CONTROL

Your data is your data. Your voice corpus is yours. Your client records are yours. xenios is built HIPAA-ready, with a BAA on request, and on a SOC 2 roadmap. Details on /security and /compliance.

PART 6 — /for-coaches (Verbatim Copy)

FOR COACHES, TRAINERS, AND PRACTITIONERS

The xenios agent on your side.

You bring the method. xenios brings the operations. Your week goes back to coaching, not coordinating.

.....

WHAT YOUR AGENT DOES

Every morning, your agent has already done the first hour of your day.

- Drafted every check-in in your voice, ready for you to approve or send.
- Triaged your inbox. Surfaced who needs you today, who can wait, and what is on fire.
- Adapted this week's programs to last week's adherence, sleep, training load, lab results, or wearable data.
- Flagged the three clients drifting on the metrics you care about, with the suggested intervention in your voice.
- Queued tomorrow's content draft, this week's invoices, and the renewal conversations that need a human touch.

You approve, edit, or send. Or you set the autonomy higher and it sends for you.

.....

HOW IT LEARNS YOUR VOICE

xenios builds your voice corpus from the work you have already done.

- Your existing client messages, with permission.

- Your existing programs, protocols, and content.
- A 20-minute onboarding interview where we ask the questions no other software ever asked you.
- Continuous learning from every message you edit, send, or reject.

After 30 days, the agent's first draft is the message you would have written, 80%+ of the time. After 90 days, you stop editing the routine ones.

.....

WHAT IT REPLACES

- Your programming app
- Your intake form tool
- Your white-label client app
- Your in-app messaging tool
- Your billing platform
- Your content tool
- Your affiliate link tool
- Your notes doc
- The spreadsheet you use to make them talk

.....

WHAT IT NEVER DOES

- Acts without your permission, until you grant it.
- Sends a clinical opinion you have not approved.
- Pretends to be you to a client.
- Trains a stranger's model on your client data.
- Locks your clients inside a platform you do not own.

.....

ONE INBOX

SMS, in-app, email, and check-in replies all land in one unified inbox. The agent drafts. You approve. The client gets a response in your voice, on the channel they actually use.

.....

ONE BILLING RAIL

Subscriptions, packages, one-offs, gift cards, affiliate splits, and storefront sales, all native. No second tool. No reconciliation week.

.....

ONE OUTCOMES LAYER

Adherence, retention, progress against goals, and outcomes the proactive health industry has never been able to measure at the coach, trainer, and practitioner level. Built in.

.....

IF YOU RUN YOUR BUSINESS ON A LEGACY COACHING PLATFORM

If you are running your business on a coaching platform today, xenios is what comes next. You keep your clients, your method, and your voice. You lose the integration tax.

[Join the waitlist] [See the client side]

PART 7 — /for-clients (Verbatim Copy)

FOR CLIENTS, ATHLETES, AND PATIENTS

The xenios client agent in your pocket.

The coach you hired. The accountability you needed. The answers you used to wait three days for. In your pocket, in their voice, all the time.

.....

THE POCKET COACH

The xenios client agent is the helper inside your coach's app. It knows your program. It knows your last session. It knows your goals, your devices, your labs, your sleep, and the way

your coach actually talks to you.

You can ask it anything you would ask your coach between sessions. It answers in your coach's voice, from your coach's method.

If the question is bigger than the agent, it routes straight to your coach with everything they need to answer fast.

.....

WHAT IT DOES FOR YOU

Today's session

Walks you through what to do, why you are doing it, and what to do differently if today is not the day.

Form and technique

Answers your form question now, not after your coach gets out of their session.

Food and supplements

Helps you stay on plan without turning your phone into a food diary.

Recovery

Pulls your sleep, HRV, soreness, and training load and tells you what your coach would tell you to do.

Medications and protocols

If you are on GLP-1, peptides, hormone therapy, or any protocol your practitioner is running, the agent knows the rules and helps you stay inside them.

The why

Educates you, in your coach's voice, on the things you have always wanted to understand about your own body.

Accountability

Nudges you the way your coach would. Catches the drift before it becomes a quit.

.....

WHAT IT DOES NOT DO

- Replace your coach or practitioner.
- Diagnose. Prescribe. Act outside the scope your provider has set.
- Pretend to be your coach. You always know when the agent is helping and when your coach is in the room.

.....

YOUR DATA, YOUR RELATIONSHIP

Everything you log, ask, and share lives in your record. Your coach sees it. xenios does not sell it. xenios does not train strangers' models on it.

[Tell your coach to put you on xenios]

PART 8 — /telemedicine, /storefront, /network

/telemedicine

TELEMEDICINE

The care delivery layer inside xenios.

For practitioners who deliver care, xenios includes an optional telemedicine layer built into the same operating system that runs the rest of your practice. Visit notes, prescriptions, labs, and follow-ups live in the same record as programs, check-ins, and messaging.

This page describes a capability available to licensed practitioners after the founding cohort launch.

What it includes

- Async and live visits, scheduled inside xenios.
- Visit notes drafted by the xenios agent in your voice, for your review and signature.
- Prescriptions, where state law and your scope allow,

through a credentialed pharmacy partner.

- Lab ordering and result interpretation, with your protocol library applied.
- Follow-ups, refills, and renewals, run by the agent on the cadence you define.
- HIPAA-ready, BAA on request.

Who it is for

Concierge physicians, longevity clinicians, functional medicine practices, hormone clinics, peptide clinics, telemedicine startups, and any licensed practitioner who wants their care delivery and their proactive health operations on one rail.

[Talk to us about telemedicine]

/storefront

STOREFRONT

The commerce layer inside xenios.

Every coach, trainer, and practitioner on xenios gets a native storefront. Subscriptions, packages, one-offs, gift cards, supplements, equipment, content, and affiliate links all run on the same billing rail as the rest of the business.

What it includes

- Native subscriptions and packages.
- Supplement and equipment storefront with first-party and partner SKUs.
- Affiliate splits and revenue share with partner brands.
- Gift cards, referrals, and renewals.
- Reconciliation, payouts, and tax all native, all in one report.

The point

You stop paying three tools to do what one tool should do. You stop reconciling. Your clients buy from you in the same app they train with you in.

[Join the waitlist]

/network

NETWORK

The coach, trainer, and practitioner network.

xenios is a network, not just a tool. Every coach, trainer, and practitioner on xenios can refer clients to other professionals on the network, with permissions and revenue share native to the system.

What it enables

- Refer a client to a nutritionist, a hormone clinic, a PT, or a peptide protocol provider, inside the same app.
- Hand off context. The receiving practitioner gets the record, with permission, on day one.
- Share revenue. Native referral splits on subscriptions and one-offs.
- Co-coach. Multiple practitioners can serve the same client without recreating the record.

A client is no longer a stranger every time they enter a new provider's office. The work the previous provider did is the foundation the next one builds on.

[Join the waitlist]

PART 9 — /ecosystem (Verbatim Copy)

ECOSYSTEM

The proactive health stack, organized.

xenios sits on top of the ecosystem. We integrate, we route, we connect. We do not own the wearable, the lab, or the GLP-1 prescription. We own the operations layer that makes them

work together for a coach, trainer, or practitioner and their clients.

Eighteen categories, growing.

1. Wearables and continuous biosensors
2. Diagnostic labs and at-home testing
3. GLP-1 and metabolic care
4. Peptides and longevity protocols
5. Recovery technology
6. Performance equipment
7. Nutrition and meal services
8. Supplements
9. Education and content
10. Coaching and training platforms
11. EHR / EMR adjacency
12. Payments and identity
13. Longevity clinics and labs
14. Sport science and performance labs
15. Clinical decision support
16. Hormone and endocrine
17. Mental performance and sleep
18. Connected devices and at-home diagnostics

We are open to partnership across every category. If you build in this space, write to us at team@xenios technology.com with the subject "Ecosystem".

[Join the waitlist]

PART 10 — /for-practitioners + 25 ICP Pages

/for-practitioners (Overview)

FOR PRACTITIONERS

xenios is built for coaches, trainers, and practitioners across the entire proactive health stack. Twenty-five categories, one operating system.

Pick yours.

[Strength coaches]	[Personal trainers]
[Online coaches]	[Sports performance]
[Nutritionists]	[Functional medicine]
[Longevity clinics]	[Concierge medicine]
[Performance labs]	[Recovery studios]
[Telemedicine startups]	[Preventive care]
[Nutrition companies]	[Supplement brands]
[Athlete brands]	[Corporate wellness]
[Healthcare systems]	[Military]
[Biohacking clinics]	[Physical therapists]
[Chiropractors]	[Hormone clinics]
[Peptide clinics]	[Self-insured employers]
[Elite athletes]	[Creators]
[Sports agencies]	

If you keep humans healthy, xenios is built for you.

ICP Page Template (apply to all 25)

[CATEGORY NAME]

xenios for [category, in plain language].

.....

THE PROBLEM

[Two-sentence description of the legacy stack pain for this category. Reference the disconnected stack of programming apps, intake form tools, white-label app builders, in-app messaging, billing, sick-care EMRs, and ad-hoc affiliate setups in language that matches this audience.]

.....

WHAT XENIOS DOES FOR YOU

- The xenios agent on your side. (One sentence in this category's language.)
- The xenios client agent on theirs. (One sentence.)
- One client record. (One sentence.)
- One billing rail. (One sentence.)

- One outcomes layer. (One sentence.)

.....

WHY THIS CATEGORY, SPECIFICALLY

[Three bullets that name the workflows specific to this ICP.
For hormone clinics, lab review cadence and protocol versioning.
For strength coaches, periodization and meet prep. For corporate
wellness, cohort enrollment and employer reporting.]

.....

WHAT IT REPLACES

[Category-specific stack list. No competitor names.]

.....

[Join the waitlist] [How it works]

Per-ICP One-Liners (top of each page)

Important: Per the stealth and competitive-narrative rules, no competitor names appear on public copy. All ICP one-liners use category language only.

Slug	One-liner
strength-coaches	The operating system for strength coaches who run programming, check-ins, and meet prep on five disconnected tools.
personal-trainers	The operating system for personal trainers who deserve more than a programming app and a billing tool stapled together.
sports-performance	The operating system for sports performance coaches across DIII, DI, and pro.
functional-medicine	Functional medicine practices without the legacy EMR drag.
longevity-clinics	The operations layer for longevity clinics that want to deliver care, not data entry.
concierge-medicine	Concierge medicine with an agent on the practitioner side and a pocket physician on the patient side.
performance-labs	The performance lab operating system. Testing, protocol, and follow-up on one rail.
recovery-studios	The recovery studio operations layer. Memberships, modalities, outcomes.
telemedicine-startups	The proactive-care operations layer for telemedicine startups.
preventive-care	The operations layer for preventive care, finally.
nutrition-companies	The operations rail under modern nutrition companies.
supplement-brands	Supplement brands, with native practitioner distribution.
athlete-brands	The athlete brand operating system. Programs, audience, commerce, outcomes.
corporate-wellness	Corporate wellness that delivers outcomes, not engagement screenshots.
healthcare-systems	The proactive health layer healthcare systems have been missing.
military	The operations system for military performance and tactical readiness programs.
biohacking-clinics	Biohacking clinics on one operating system, not seven.
physical-therapists	Physical therapy without the EMR tax.
chiropractors	Chiropractic care with a real client app and real outcomes.

Slug	One-liner
hormone-clinics	Hormone clinics with protocol versioning, lab review, and patient follow-through native.
peptide-clinics	Peptide clinics with compliance, protocol, and patient engagement on one rail.
self-insured-employers	The proactive health operating layer for self-insured employers.
elite-athletes	The operating system for elite athletes and the teams around them.
creators	The operating system for health creators who want a real coaching business, not a link page.
sports-agencies	The performance, recovery, and care operations layer for sports agencies.

PART 11 — Manifesto, About, Careers, Waitlist, Contact, Security, Compliance, Investors, Press, Privacy, Terms

/manifesto

MANIFESTO

Sick care is the floor. Proactive health is the ceiling.

For 50 years, the health system has been organized around treating people after something has gone wrong. The operating systems were built for that. The EMRs, the billing rails, the revenue cycle, the visit, the code, the claim.

Meanwhile, the people who actually keep humans healthy, the strength coaches, the personal trainers, the nutritionists, the functional medicine doctors, the longevity clinicians, the concierge physicians, the recovery studios, the hormone clinics, the peptide clinics, the performance labs, have been running their businesses on a disconnected stack of consumer apps, spreadsheets, and integration tape.

They have been the integration layer. Their week has gone to coordination, not coaching.

We are building the operating system for the other side of the health equation.

xenios is one rail under every coach, trainer, and practitioner who keeps humans healthy. One agent on their side, one agent on the client's side, one client record, one billing rail, one outcomes layer. Built to replace the stack. Built to compound across the ecosystem. Built to make proactive health a real industry, not a collection of disconnected tools.

The relationship belongs to the coach. The work belongs to the AI. The outcomes, finally, belong to everybody.

We are hiring the founding team now.

team@xenios technology.com

/about

ABOUT

The team.

xenios is being built by a team behind \$710M+ in prior exits, including FinDox and InstaMed, with contributors and product team members whose prior work spans professional sports, top coaching platforms, leading consumer health brands, and the operations layer of modern healthcare.

We have built operating systems for industries before. We are building the one for proactive health now.

Heritage

- \$710M+ in prior exits, including FinDox and InstaMed.
- Prior work across professional sports, leading coaching platforms, and top consumer health brands.
- Builders, coaches, and operators from inside the industries we serve.

Product team

Alex Houston

Founder of MetrikosAMS. Author of The Output. Direct line to 2,500+ strength and conditioning coaches across DIII, DI, and professional sport. On the xenios product team, Alex leads athlete-side program design, periodization templates, the protocol library, and open ontology fragments. He is the reason the strength and conditioning surface of xenios looks like it was built by a coach, not by an engineer guessing at one.

How we work

Remote first. Austin preferred. One inbox at team@xeniosotechnology.com. We move fast and we ship.

[See open roles]

/careers

CAREERS

Five founding seats.

We are hiring the founding team that will build the AI-adjunct operations system for coaches, trainers, and practitioners.

Five roles, all remote, Austin preferred.

1. Founding Senior Software Engineer
2. Founding Product Engineer
3. Founding AI / ML Platform Engineer
4. Founding UI / UX Designer
5. Founding Coach Partnerships Lead

All roles are founding equity plus competitive cash on close of pre-seed.

How to apply

Email team@xeniosotechnology.com with the subject line prefix that matches the role. Full details on each role below.

[Jump to roles ↴]

(Five full role copies appear in Part 12.)

/waitlist

JOIN THE WAITLIST

550+ coaches, trainers, and practitioners are already in line.

You will get

- Priority onboarding when the founding cohort opens.
- Founder-direct support during onboarding.
- Founding pricing, locked in for the life of your account.
- A seat in the room when we ship.

[first name] [last name]

[email]

[role / category ▾]

[company / practice name (optional)]

[city, country]

[what would you replace? ▾]

[Join the waitlist →]

- Live counter: 550+ and updating.

- "Careers: [role]" Job applications
- "Security" Security and disclosure
- "Compliance" BAA, SOC 2, legal
- "Telemedicine" Care delivery partnerships

/security

SECURITY

HIPAA-ready posture.

xenios is being built HIPAA-ready from day one. A BAA is available on request for practitioners delivering care or handling PHI.

Posture

- Encryption at rest and in transit (AES-256, TLS 1.2+).
- Role-based access control across coach, client, and admin surfaces.
- Audit logging on every PHI read and write.
- Least-privilege production access. Break-glass procedure in place.
- Vendor diligence on every subprocessor.
- Data residency in the United States.
- Annual penetration testing pre-launch and ongoing.

Responsible disclosure

If you believe you have found a vulnerability, email team@xeniosotechnology.com with the subject "Security". We will acknowledge within one business day.

/compliance

COMPLIANCE

SOC 2 roadmap.

We are on a SOC 2 Type II roadmap with target completion within twelve months of general availability. Type I report will be issued first.

- HIPAA-ready posture, BAA available on request.
- SOC 2 Type I in progress.
- SOC 2 Type II target inside 12 months of GA.
- HITRUST evaluation on the roadmap.
- Subprocessor list published and updated quarterly at </compliance/subprocessors>.

Compliance contact

team@xenios technology.com, subject line "Compliance".

/investors

INVESTORS

A soft landing.

xenios is the AI-adjunct operations system for coaches, trainers, and practitioners. The B2B2C operating system that will collapse the disconnected stack the proactive health industry runs on today.

If you back category-defining infrastructure companies and want a conversation, write to team@xenios technology.com with the subject line "Investor". We will respond.

We are not soliciting investment from the general public.
This page is informational only.

/press

PRESS

xenios is the AI-adjunct operations system for coaches, trainers, and practitioners. It replaces the disconnected stack of programming apps, intake form tools, white-label app builders, in-app messaging platforms, billing platforms, sick-care EMRs, and ad-hoc affiliate setups most coaches and trainers are stuck with today. The team behind xenios has \$710M+ in prior exits, including FinDox and InstaMed.

Founder background brief	[Download]

Press contact: team@xeniosotechnology.com, subject "Press".

/privacy

PRIVACY

(Full privacy policy. Highlights:)

- We collect only what we need to deliver the product.
- We do not sell personal information.
- We do not train third-party models on your data or your clients' data.
- We honor HIPAA requirements where PHI is involved.
- We provide deletion, export, and access rights.
- We disclose subprocessors at </compliance/subprocessors>.

Effective date: at general availability.

Contact: team@xeniosotechnology.com, subject "Privacy".

/terms

TERMS

(Full terms of service. Highlights:)

- xenios is licensed, not sold.
- The coach, trainer, or practitioner owns their client relationship and their data.
- We provide a 30-day data export window on any account close.
- Standard limitations of liability apply.
- Governing law: Delaware. Venue: Austin, Texas.

Effective date: at general availability.

Contact: team@xeniosotechnology.com, subject "Terms".

PART 12 — Founding Job Postings (Verbatim Copy)

Architectural note: Roles 1 and 3 are kept separate. Founding Senior Software Engineer owns the core platform (Go services, Postgres, the data model, API surface). Founding AI / ML Platform Engineer owns the agent runtime, evals, guardrails, and voice corpus pipeline. They are different jobs that hand off at a clean interface (agent runtime calls platform APIs). Merging them produces a generalist who ships neither well.

Global formatting rules for every posting below: Black ink text on cream ground. Buttons: ink ground with cream text. No em dashes. Phrasing uses "coaches, trainers, and practitioners" where the role serves the audience. Apply via team@xeniosotechnology.com with the subject line shown.

1. Founding Senior Software Engineer

FOUNDING SENIOR SOFTWARE ENGINEER

Remote. Austin preferred. Founding equity plus competitive cash on close of pre-seed.

Apply: team@xeniosotechnology.com

Subject: "Careers: Founding Senior Software Engineer"

.....

THE COMPANY

xenios is the AI-adjunct operations system for coaches, trainers, and practitioners. We replace the disconnected stack of programming apps, intake form tools, white-label app builders, in-app messaging platforms, billing platforms, sick-care EMRs, and ad-hoc affiliate setups the proactive health industry runs on today. Built by the team behind \$710M+ in prior exits, including FinDox and InstaMed.

THE ROLE

You will be the second engineer on the platform. You own the core services, the data model, and the API surface that the xenios agent runtime and every client surface call into. You write Go services, Postgres schemas, and TypeScript when the surface meets the user. You set the patterns the rest of the team will inherit.

WHAT YOU WILL DO IN THE FIRST 90 DAYS

- Stand up the production-grade client record service. One record per client, written by both surfaces, queryable by the agent.
- Ship the unified inbox backend (SMS, in-app, email) with idempotent message ingestion and a clean event model.
- Build the programs and protocols service. Version-aware, branchable, assignable per client, observable by the agent.
- Define our service boundaries, our deploy pipeline, our observability defaults, and our on-call rotation.
- Pair with the AI / ML Platform Engineer on the agent runtime's read and write paths.

WHAT YOU BRING

- 6+ years shipping production backends. Go preferred. TypeScript or Rust experience is welcome.
- Deep Postgres. Schema design, migrations, query plans, the boring parts done right.
- Familiarity with agentic LLM patterns is a plus. You do not need to be the model expert. You need to build the platform the model is sitting on.
- Experience at a 2 to 20 person startup or a small platform team inside a larger company.
- HIPAA or any regulated data environment experience is a strong plus.

WHAT SUCCESS LOOKS LIKE IN 90 DAYS

The first 50 coaches, trainers, and practitioners are running their businesses on the platform you built. The agent is reading and writing through your APIs. Nothing is on fire. The next engineer wants to work on the codebase you set up.

COMPENSATION

Founding equity plus competitive cash on close of pre-seed. Specific bands shared in the second conversation.

[[Apply →](#)]

2. Founding Product Engineer

FOUNDING PRODUCT ENGINEER

Remote. Austin preferred. Founding equity plus competitive cash on close of pre-seed.

Apply: team@xeniotechnology.com

Subject: "Careers: Founding Product Engineer"

.....

THE ROLE

You live where design and engineering meet. You ship the surfaces that coaches, trainers, and practitioners touch every day. You also ship the client surface that their clients, athletes, and patients touch. You move fast in TypeScript, Next.js, and React, and you make the product feel inevitable.

WHAT YOU WILL DO IN THE FIRST 90 DAYS

- Ship the v1 coach inbox, the v1 client record view, and the v1 client app onboarding flow.
- Partner with the UI / UX Designer to take the visual system from spec to shipping product, with no quality loss.
- Wire the xenios agent and the xenios client agent into the surfaces so the AI is felt, not narrated.
- Build the founder-direct feedback loop. The first 50 coaches, trainers, and practitioners tell us what is wrong and you make it right in the same week.

WHAT YOU BRING

- 4+ years shipping production product surfaces.
- Strong TypeScript, React, and Next.js App Router.
- Real opinions on UX. You read the design spec and find three things to improve before lunch.
- Comfortable with Framer Motion, accessibility, and the small details that make a product feel finished.
- Bonus: prior work on coaching, fitness, healthcare, or any multi-surface relationship-driven product.

WHAT SUCCESS LOOKS LIKE IN 90 DAYS

The first time a coach opens xenios, they say "this is what I wish the other tool had been." The first time their client opens the app, they keep it open. You shipped that.

[Apply →]

3. Founding AI / ML Platform Engineer

FOUNDING AI / ML PLATFORM ENGINEER

Remote. Austin preferred. Founding equity plus competitive cash on close of pre-seed.

Apply: team@xeniosotechnology.com

Subject: "Careers: Founding AI Platform Engineer"

.....

THE ROLE

You own the xenios agent runtime. Both surfaces (the xenios agent for the coach, trainer, or practitioner, and the xenios client agent for the client, athlete, or patient) call your code. You own the eval rigor, the guardrails, the voice corpus pipeline, the autonomy controls, and the safety posture.

You are not building a chatbot. You are building the substrate of a regulated, voice-faithful, accountability-aware AI that sits between a practitioner and their client. The bar is high.

WHAT YOU WILL DO IN THE FIRST 90 DAYS

- Stand up the agent runtime. Tool calling, memory, voice corpus retrieval, autonomy levels, escalation paths.
- Build the voice corpus pipeline. Ingest a coach's prior messages, programs, and content. Produce a faithful, measurable voice model. Continuously refine from edits.
- Build the eval harness. Voice fidelity, factual accuracy, scope adherence, safety, escalation correctness. Per-coach, per-client, per-workflow.
- Build the guardrails. No clinical opinion outside scope. No impersonation. No off-method advice. Hard rails.
- Pair with the Senior Software Engineer on every read and

write the agent does into the platform.

WHAT YOU BRING

- 4+ years building real ML or LLM systems in production.
- Hands-on with current agentic patterns (tool use, planning, memory, retrieval, multi-turn evals).
- Strong opinions on eval rigor. You do not ship a prompt without a measurement.
- Comfortable with Python and TypeScript. Comfortable on the infrastructure side, not just the notebook side.
- Bonus: prior work in healthcare, coaching, voice cloning, or any domain where impersonation has consequences.

WHAT SUCCESS LOOKS LIKE IN 90 DAYS

Coaches, trainers, and practitioners on xenios say the agent sounds like them. The eval scores prove it. The guardrails hold. No client ever receives a message the coach would not have approved. The autonomy dial works as advertised.

[Apply →]

4. Founding UI / UX Designer

FOUNDING UI / UX DESIGNER

Remote. Austin preferred. Founding equity plus competitive cash on close of pre-seed.

Apply: team@xeniosotechnology.com

Subject: "Careers: Founding UI / UX Designer"

.....

THE ROLE

You define the xenios visual system. You own the coach surface and the client surface. You make the AI-adjunct operations system feel like infrastructure, not like another wellness app. The wordmark is "xenios", lowercase, no period. The palette is cream and ink with restrained accents. The typography is heavy geometric sans. Everything else is yours to build.

WHAT YOU WILL DO IN THE FIRST 90 DAYS

- Ship the v1 design system. Tokens, type scale, component library, motion language, accessibility floor.
- Design the v1 coach inbox, client record view, programs and protocols editor, and outcomes layer.
- Design the v1 client app: pocket coach, today's session, check-ins, messaging, education.
- Define the visual handling of the xenios agent and the xenios client agent across both surfaces. The AI should feel like a calm presence, not a pop-up.
- Set the bar on visual quality. No blank boxes. No invisible text. No empty states. Every slot is a real composition.

WHAT YOU BRING

- 5+ years designing complex, multi-surface product systems.
- A portfolio that shows opinionated visual systems, not just template work.
- Native fluency in Figma. Comfort with motion (Framer Motion, Rive, or After Effects) is a strong plus.
- Strong accessibility chops. WCAG AA is the floor, not the ceiling.
- Bonus: prior work in coaching, healthcare, fitness, or consumer products with a daily-use loop.

WHAT SUCCESS LOOKS LIKE IN 90 DAYS

A coach opens xenios and feels like the product was made for them. A client opens the app and stops checking the other fitness app. An investor takes one look at the homepage and understands the category in ten seconds. You shipped that.

[Apply →]

5. Founding Coach Partnerships Lead

FOUNDING COACH PARTNERSHIPS LEAD

Remote. Austin preferred. Founding equity plus competitive cash on close of pre-seed.

Apply: team@xeniosotechnology.com

Subject: "Careers: Founding Coach Partnerships Lead"

.....

THE ROLE

You recruit, onboard, and serve the first 100 coaches, trainers, and practitioners on xenios. You are the human at the founder line who makes sure the founding cohort feels like a founding cohort, not a beta list.

You know this industry. You know the difference between a power user on a legacy coaching app, a strength and conditioning director, a functional medicine clinic operator, and a longevity physician. You know who actually moves the needle and who just has a podcast.

WHAT YOU WILL DO IN THE FIRST 90 DAYS

- Recruit the first 100 founding-cohort coaches, trainers, and practitioners across our priority ICPs.
- Run the founder-direct onboarding for each one. Voice corpus interview. Stack audit. First-30-day plan.
- Build the feedback loop into the product team. Every blocker, every miss, every win, into the same room every week.
- Stand up the referral and partnership motion. Brand partners, coaching networks, professional associations.
- Be the human face of the company to the audience the company is built for.

WHAT YOU BRING

- 5+ years in coaching, training, performance, or proactive health. Operator credibility, not just sales credibility.
- Existing relationships across at least three of our ICPs.
- Comfortable on the phone, on Zoom, on Loom, and in person.
- Can write a clean, voice-faithful email. Can host a founders-and-coaches dinner. Can read a P&L.
- Bonus: previous experience launching a category-defining product into a coach, trainer, or practitioner audience.

WHAT SUCCESS LOOKS LIKE IN 90 DAYS

100 founding-cohort accounts onboarded. 80%+ active in week four. A waitlist that no longer needs paid acquisition. A product team that hears the customer every Monday.

[[Apply](#) →]

Note on excluded role: Fractional Business Advisor is **removed** from /careers and from all public surfaces. Alex Houston's role is product-team content surfaced on /about, not an advisor posting.

PART 13 — Visual Design System

Wordmark

Item	Spec
Wordmark text	<code>xenios</code> (lowercase, no period, no glyph)
Logotype glyph	None
Trailing punctuation	None, ever. Sweep entire codebase.
Acceptable shorthand	"xenios" only. Never "Xenios" in user-facing copy, except legal entity "Xenios Technologies, Inc." in /terms, /privacy, footer copyright.

Typography

Token	Family	Weight	Use
<code>font-display</code>	PP Neue Montreal (or Aeonik, or Söhne)	600	H1, hero, posters
<code>font-heading</code>	PP Neue Montreal	500	H2, H3
<code>font-body</code>	PP Neue Montreal	400	Body, UI labels
<code>font-mono</code>	JetBrains Mono	400	Code, captions, "live counter" digits

Type scale (rem, base 16): 0.75, 0.875, 1, 1.125, 1.25, 1.5, 2, 2.75, 4, 5.5, 7.5.

Color palette

Token	Value	Use
--cream	 #F5F0E6	Default page ground
--cream-warm	 #EFE8D8	Section alternation
--ink	 #0E0E0C	Default text, buttons, borders
--ink-soft	 #3A3A36	Secondary text
--accent-ember	 #E04F1F	Live counter dot, rare emphasis
--accent-moss	 #5F7A4E	Success states
--accent-bone	 #FFFFFF	Allowed only on ink-ground buttons or chips. Never as body text on cream.

Hard rule: white text () appears **only** on top of  or any gradient panel whose darkest tone is verified to pass WCAG AA against white at the densest point. No exceptions.

Button system

Variant	Ground	Text	Border
Primary			None
Secondary			1.5px 
Tertiary (text link)	transparent		1px underline on hover

Forbidden: white-ground buttons on cream. White text on cream. Cream text on cream. Invisible borders. These will be caught in the visibility sweep (Part 17).

Atmospheric gradient presets (6)

Name	Stops	Mood
dawn	 #F5F0E6 to  #E8D7B8 to  #C99A6B	Hero default
dusk	 #EFE8D8 to  #A5837F to  #3A3A36	Replacement narrative, before / after
tundra	 #F5F0E6 to  #D9E2DA to  #5F7A4E	Calm states, security, compliance
ember	 #F5F0E6 to  #E8B788 to  #E04F1F	Live counter, CTA emphasis
obsidian	 #3A3A36 to  #0E0E0C	Footer, dark sections
vellum	 #F5F0E6 to  #EFE8D8	Quiet alternation

Every gradient panel that contains text passes WCAG AA at its densest point. Validate with Figma plugin "Stark" or `npx wcag-cli` before merge.

"Visual slot" rule (NON-NEGOTIABLE)

Every section that wants a visual gets one of three real treatments. **Never** a blank rectangle.

1. **Gradient + typographic composition.** A pull-quote, a stat, or a typeset list set into a gradient panel.
2. **Gradient + diagram.** A simple labeled flow, a before / after stack, an icon grid.
3. **Gradient + product reference.** Once UI screenshots exist, real product references replace placeholders. Until then, options 1 and 2 only.

Implementation: build a `<VisualSlot>` React component with `variant="quote" | "diagram" | "product"`. Reject any PR that ships a `<div className="placeholder" />`.

Fixed-width rotating word

The hero rotates 14 to 18 audience labels inside a pill whose width is locked to the widest entry. No layout shift, ever.

Approach

Measure on mount with a hidden duplicate span, then pin the pill width to the largest measured value. Reactively re-measure on font load and on viewport breakpoint change.

React + Framer Motion implementation

tsx

```

'use client';

import { useEffect, useLayoutEffect, useRef, useState } from 'react';
import { AnimatePresence, motion } from 'framer-motion';

const ROLES = [
  'strength coaches',
  'personal trainers',
  'online coaches',
  'sports performance coaches',
  'nutritionists',
  'functional medicine doctors',
  'longevity clinicians',
  'GLP-1 coaches',
  'concierge physicians',
  'performance labs',
  'recovery studios',
  'hormone clinics',
  'peptide clinics',
  'biohacking clinics',
  'physical therapists',
  'chiropractors',
];

export function RotatingRole() {
  const measureRef = useRef<HTMLDivElement>(null);
  const [pillWidth, setPillWidth] = useState<number | null>(null);
  const [index, setIndex] = useState(0);

  // Lock pill width to the widest role, measured in the hidden node.
  useLayoutEffect(() => {
    if (!measureRef.current) return;
    const spans = Array.from(measureRef.current.children) as HTMLElement[];
    const widest = Math.max(...spans.map((s) => s.getBoundingClientRect().width));
    setPillWidth(Math.ceil(widest) + 48); // 24px horizontal padding each side
  }, []);

  // Re-measure on font load (prevents reflow when the display font swaps in).
  useEffect(() => {
    if (typeof document === 'undefined' || !('fonts' in document)) return;
    document.fonts.ready.then(() => {
      if (!measureRef.current) return;
      const spans = Array.from(measureRef.current.children) as HTMLElement[];

```

```

    const widest = Math.max(...spans.map((s) => s.getBoundingClientRect().width));
    setPillWidth(Math.ceil(widest) + 48);
  });
}, []);

useEffect(() => {
  const id = setInterval(() => setIndex((i) => (i + 1) % ROLES.length), 2200);
  return () => clearInterval(id);
}, []);

return (
  <>
    { /* Hidden measurement node, same font / weight / size as the visible pill. */
    <div
      ref={measureRef}
      aria-hidden
      className="pointer-events-none invisible absolute -z-50 whitespace-nowrap fo
    >
      {ROLES.map((r) => (
        <span key={r}>{r}</span>
      ))}
    </div>

    <span
      role="text"
      aria-label={`for ${ROLES[index]}`}
      className="inline-flex items-center justify-center overflow-hidden rounded-f
      style={{ width: pillWidth ?? 'auto', height: '1.2em' }}
    >
      <AnimatePresence mode="wait" initial={false}>
        <motion.span
          key={ROLES[index]}
          initial={{ y: '100%', opacity: 0 }}
          animate={{ y: '0%', opacity: 1 }}
          exit={{ y: '-100%', opacity: 0 }}
          transition={{ duration: 0.32, ease: [0.22, 1, 0.36, 1] }}
          className="whitespace-nowrap font-display font-semibold"
        >
          {ROLES[index]}
        </motion.span>
      </AnimatePresence>
    </span>
  </>

```

```
);  
}
```

QA: scroll through all 16 roles on iPhone SE (375px), Pixel 7 (412px), and 1440px desktop. Verify zero horizontal shift in the surrounding line.

Page transitions + scroll-to-top

App Router auto-scrolls on push, but multiple shipped Next.js sites confirm it can fail intermittently with deep layouts, suspense boundaries, and large pages. Implement both an explicit `ScrollToTop` and a Framer Motion `LayoutTransition` at the root. [LogRocket](#)

app/components/ScrollToTop.tsx

```
tsx  
  
'use client';  
  
import { useEffect } from 'react';  
import { usePathname } from 'next/navigation';  
  
export function ScrollToTop() {  
  const pathname = usePathname();  
  
  useEffect(() => {  
    // Disable native restoration so back / forward never strands us mid-page on a r  
    if (typeof window !== 'undefined' && 'scrollRestoration' in window.history) {  
      window.history.scrollRestoration = 'manual';  
    }  
    // Skip scroll-to-top if a hash is present (anchor links smooth-scroll instead).  
    if (typeof window !== 'undefined' && !window.location.hash) {  
      window.scrollTo({ top: 0, left: 0, behavior: 'instant' as ScrollBehavior });  
    }  
  }, [pathname]);  
  
  return null;  
}
```

app/template.tsx (Framer Motion page transition)

```
tsx
```

```

'use client';

import { AnimatePresence, motion } from 'framer-motion';
import { usePathname } from 'next/navigation';

export default function Template({ children }: { children: React.ReactNode }) {
  const pathname = usePathname();

  return (
    <AnimatePresence mode="wait" initial={false}>
      <motion.div
        key={pathname}
        initial={{ opacity: 0, y: 8 }}
        animate={{ opacity: 1, y: 0 }}
        exit={{ opacity: 0, y: -4 }}
        transition={{ duration: 0.24, ease: [0.22, 1, 0.36, 1] }}
      >
        {children}
      </motion.div>
    </AnimatePresence>
  );
}

```

app/layout.tsx (wire it in)

```

tsx

import { ScrollToTop } from '../components/ScrollToTop';
import './globals.css';

export default function RootLayout({ children }: { children: React.ReactNode }) {
  return (
    <html lang="en">
      <body>
        <ScrollToTop />
        {children}
      </body>
    </html>
  );
}

```

Anchor link behavior

In `globals.css`:

```
css

html { scroll-behavior: smooth; }
```

Anchor links within a page (`<Link href="#section">`) smooth-scroll. `ScrollToTop` early-returns when `window.location.hash` is present, so they do not get clobbered.

External links

All external links: `target="_blank"` with `rel="noopener noreferrer"`. Indicator icon (small NE arrow) appended in CSS.

PART 14 — Transactional Emails

All emails use the wordmark `xenios` (no period). No em dashes anywhere, including sign-offs. The address is `team@xeniosotechnology.com`.

E1, Waitlist confirmation (to applicant)

```

Reply directly to onboard.

E3, Founding cohort opens

Subject: The xenios founding cohort is open.

Hi {{first_name}},

The founding cohort is open. You are on the list because you signed up early.

What that means

- Priority onboarding this week.
- Founder-direct support during setup.
- Founding pricing, locked in for the life of your account.
- A seat in the room when we ship.

Pick a slot here: {{onboarding_link}}

Reply to this email if you want a human to walk you through it first. team@xenios technology.com.

The xenios team

E4, Careers acknowledgment

Subject: We have your application for {{role_title}}.

Hi {{first_name}},

Thanks for applying to {{role_title}} at xenios.

We read every application ourselves. Expect to hear back from a human within seven days.

In the meantime, the manifesto is at xeniostechnology.com/manifesto if you want the long version of why we are building this.

team@xeniostechnology.com

The xenios team

E5, Press / investor / partnership acknowledgment

Subject: We received your note ({{subject_prefix}}).

Hi {{first_name}},

Thanks for writing to xenios. A human on our team will reply within two business days.

team@xeniostechnology.com

The xenios team

PART 15 — Resend Implementation

DNS records (Resend dashboard generates exact values)

Add at the DNS provider for `xeniostechnology.com`:

Type	Host	Value	Purpose
MX	send	feedback-smtp.us-east-1.amazonses.com (priority 10)	Resend return path
TXT	send	v=spf1 include:amazonses.com ~all	SPF
TXT	resend._domainkey	(long DKIM string from Resend)	DKIM
TXT	_dmarc	v=DMARC1; p=none; rua=mailto:team@xeniostechology.com	DMARC (start at p=none, tighten to quarantine after 30 days)

Verify in Resend dashboard before going live. Domain verification is a production requirement, not a development prerequisite, so dev can proceed against Resend's onboarding sandbox.

Environment variables

```
RESEND_API_KEY=re_*****
RESEND_FROM="xenios <team@xeniostechology.com>"
RESEND_REPLY_TO="team@xeniostechology.com"
RESEND_INTERNAL_ALERT_TO="team@xeniostechology.com"
NEXT_PUBLIC_SITE_URL="https://xeniostechology.com"
```

lib/resend.ts

```
ts
```

```
import { Resend } from 'resend';

if (!process.env.RESEND_API_KEY) {
  throw new Error('RESEND_API_KEY is required');
}

export const resend = new Resend(process.env.RESEND_API_KEY);

export const EMAIL_FROM = process.env.RESEND_FROM ?? 'xenios <team@xeniosotechnology.>';
export const EMAIL_REPLY_TO = process.env.RESEND_REPLY_TO ?? 'team@xeniosotechnology.>';
export const INTERNAL_ALERT_TO = process.env.RESEND_INTERNAL_ALERT_TO ?? 'team@xeniosotechnology.>';
```

React Email templates

`emails/WaitlistConfirmation.tsx` and `emails/InternalAlert.tsx` render the bodies from Part 14. Build with `@react-email/components`. Keep them plain (no images, no tracking pixels) so deliverability stays high.

Route handler — `app/api/waitlist/route.ts`

ts

```
import { NextResponse } from 'next/server';
import { resend, EMAIL_FROM, EMAIL_REPLY_TO, INTERNAL_ALERT_TO } from '@/lib/resend';
import { WaitlistConfirmation } from '@/emails/WaitlistConfirmation';
import { InternalAlert } from '@/emails/InternalAlert';
import { incrementWaitlistCounter } from '@/lib/counter';

export async function POST(req: Request) {
  try {
    const body = await req.json();
    const { firstName, lastName, email, roleCategory, company, city, wouldReplace, u

    if (!email || !firstName || !roleCategory) {
      return NextResponse.json({ error: 'Missing required fields' }, { status: 400 })
    }

    const count = await incrementWaitlistCounter();

    // 1. Confirmation to the applicant.
    const confirmation = await resend.emails.send({
      from: EMAIL_FROM,
      to: [email],
      replyTo: EMAIL_REPLY_TO,
      subject: 'You are on the xenios waitlist.',
      react: WaitlistConfirmation({ firstName }),
    });

    if (confirmation.error) {
      return NextResponse.json({ error: confirmation.error }, { status: 502 });
    }

    // 2. Internal alert to team@.
    await resend.emails.send({
      from: EMAIL_FROM,
      to: [INTERNAL_ALERT_TO],
      replyTo: email,
      subject: `New waitlist signup: ${firstName} ${lastName} (${roleCategory})`,
      react: InternalAlert({
        firstName,
        lastName,
        email,
        roleCategory,
        company,
        city,

```

```

        wouldReplace,
        utm,
        count,
    }},
  });

  return NextResponse.json({ ok: true, count });
} catch (err) {
  return NextResponse.json({ error: 'Something went wrong' }, { status: 500 });
}
}

```

Live counter

`incrementWaitlistCounter()` is a server-side function backed by an atomic increment on a small key in your KV store (Vercel KV, Upstash Redis, or a Postgres `counter` row with `UPDATE ... RETURNING`). Seed at **550** before launch. Expose via `GET /api/waitlist/count` for the homepage pill to poll every 15 seconds, or push via SSE or WebSocket if you want a "ticks live" effect.

Troubleshooting checklist

Symptom	Likely cause	Fix
Email lands in spam	DKIM not fully propagated or DMARC too strict	Wait 24h after DNS, start DMARC at <code>p=none</code>
422 from Resend	<code>from</code> domain not verified	Verify domain in Resend dashboard
401 from Resend	API key missing or wrong	Re-read <code>RESEND_API_KEY</code> from <code>.env.local</code> , redeploy
Internal alert never arrives	Caught by Google spam due to <code>replyTo</code> of unknown sender	Add <code>team@xeniosotechnology.com</code> to internal contacts
Counter desync	Two replicas writing	Use atomic Redis <code>INCR</code> or Postgres <code>UPDATE ... RETURNING</code>
Confirmation arrives but renders broken in Outlook	React Email default styles	Use the <code>@react-email/components</code> primitives, not raw CSS

Cross-client deliverability test (block on launch)

Send a real signup through and verify rendering and inbox-not-spam placement in:

- Gmail (web, iOS, Android)
 - Outlook (web, desktop, iOS)
 - Apple Mail (macOS, iOS)
 - ProtonMail (web)
 - iCloud Mail
-

xenios

> The AI-adjunct operations system for coaches, trainers, and practitioners.

xenios is one operating system that runs the business of every coach, trainer, and practitioner who keeps humans healthy, and the daily experience of every client, athlete, or patient they serve.

It replaces the disconnected stack of programming apps, intake form tools, white-label client app builders, in-app messaging platforms, billing platforms, sick-care EMRs, and ad-hoc affiliate setups the proactive health industry runs on today.

It is built by the team behind \$710M+ in prior exits, including FinDox and InstaMed.

Two surfaces

- The xenios agent is the AI partner for the coach, trainer, or practitioner. It drafts messages in their voice, builds programs, runs check-ins, triages the inbox, and handles billing.
- The xenios client agent is the pocket coach for the client, athlete, or patient. It answers questions in the coach's voice, holds them accountable, and routes anything outside scope back to the human.

What we do not do

- Replace human judgment.
- Diagnose, prescribe, or act outside scope.
- Pretend the agent is the coach.
- Train third-party models on customer data.

Audience

- Strength coaches, personal trainers, online coaches, sports performance coaches
- Nutritionists, functional medicine doctors, longevity clinicians, GLP-1 coaches
- Concierge physicians, performance labs, recovery studios, hormone clinics
- Peptide clinics, biohacking clinics, physical therapists, chiropractors

- And nine more categories listed at /for-practitioners

```

sitemap.xml

Auto-generate from the App Router routes using `next-sitemap` or a custom `app/sitemap.ts`. Include all routes listed in Part 2 with `lastmod`, `changefreq: weekly` for marketing pages, `monthly` for legal pages.

PART 17 — Launch Checklist / Definition of Done

Sweeps (block release)

#	Sweep	Rule	How to verify
1	Em-dash sweep	No <code>—</code> anywhere in user-facing strings, including email sign-offs and meta titles	<code>grep -RIIn "--" app/ components/ emails/ public/</code> returns zero

#	Sweep	Rule	How to verify
2	Wordmark sweep	No <code>xenios.</code> with trailing period	<code>grep -RIn "xenios\" app/ components/ emails/ public/</code> returns zero (allow only "Xenios Technologies, Inc." in legal copy)
3	Audience phrasing sweep	No standalone <code>practitioners</code> as the sole audience word in marketing copy	Manual review of hero, /product, /for-*, /manifesto, emails
4	Visibility sweep	No white-on-cream text, no white-ground buttons on cream, no invisible borders	Manual contrast pass + automated WCAG via <code>axe-core</code> on every route
5	Blank-box sweep	Every visual slot is a real composition	Grep for <code>placeholder</code> , <code>TODO</code> , empty <code><div className="aspect-</code> returns zero
6	Rotating-word sweep	Fixed pill width holds across all 16 entries	QA at 375px, 412px, 768px, 1024px, 1440px viewports
7	Page transition sweep	Every route push fades + translates 8px in 240ms	Manual check on 10 routes
8	Scroll-to-top sweep	Every route push lands at top, except anchor links	Manual check on 10 routes including deep <code>/for/*</code> pages
9	Plain-English review	/how-it-works is readable by someone who has never used ChatGPT	Have one non-technical coach friend read it before launch
10	B2B2C 10-second test	Investor lands cold and explains the model back in 10 seconds	3 cold investor tests
11	Advisor role sweep	No "advisor" role anywhere on /careers or in nav	<code>grep -RIn -i "advisor" app/careers/</code> returns nothing customer-facing
12	Resend cross-client	Confirmation + internal alert deliver and render correctly in Gmail, Outlook, ProtonMail, iCloud, Apple Mail	Real test send from production, screenshots in launch tracker

#	Sweep	Rule	How to verify
13	Live counter	Starts at 550, ticks in real time on signup	Manual test in staging with two browser windows
14	JSON-LD	Validates in Google Rich Results test	Run before launch
15	llms.txt	Returns 200, content current	curl in CI
16	Competitor name sweep	No public copy names Trainerize, Everfit, TrueCoach, or any competitor	<code>grep -RI n -i "trainerize everfit truecoach" app/components/ public/</code> returns zero

Functional definition of done

- ☐ Homepage hero rotates 16 roles with zero layout shift.
- ☐ Two-surface section uses "the xenios agent" and "the xenios client agent" framing. No internal sub-agent names exposed.
- ☐ /how-it-works defines "agent," "voice corpus," and the three autonomy levels in plain English.
- ☐ /for-coaches and /for-clients are live with full verbatim copy.
- ☐ /for-practitioners overview links to all 25 ICP pages.
- ☐ All 25 ICP pages live with the template applied and per-ICP one-liner from Part 10.
- ☐ /careers shows 5 founding roles. No advisor.
- ☐ /about includes the heritage block and the Alex Houston bio.
- ☐ /telemedicine, /storefront, /network, /ecosystem refreshed.
- ☐ /manifesto, /security, /compliance, /investors, /press, /privacy, /terms refreshed.
- ☐ Page transition + ScrollToTop verified on every route.
- ☐ Waitlist signup writes to store, fires confirmation email, fires internal alert, increments live counter.
- ☐ DNS verified in Resend (SPF, DKIM, DMARC).
- ☐ OG image renders on Slack, Twitter, LinkedIn, iMessage.
- ☐ Lighthouse: Performance ≥ 90 , Accessibility = 100, Best Practices ≥ 95 , SEO = 100.
- ☐ axe-core: zero serious or critical violations on every route.
- ☐ `grep` sweeps 1 to 5 and 16 all pass.
- ☐ Three non-technical readers reviewed /how-it-works without questions.
- ☐ Three cold investor B2B2C tests passed.

Final notes for designer + developer

- **The wordmark is xenios.** Lowercase. No period. Anywhere. Ever.
- **No em dashes.** If you find yourself wanting one, use a comma, a period, parentheses, or restructure.
- **"Coaches, trainers, and practitioners"** is the standard audience rendering. Practitioner is the third word, not the first.
- **Two surfaces, not eight agents.** Internal architecture stays internal.
- **B2B2C in 10 seconds** is the homepage acceptance test. If a cold investor cannot explain the model back to you after 10 seconds on the hero, the homepage is not done.
- **No blank boxes.** Every slot is a real composition.
- **No competitor names** on public copy. Use category language only.

Ship it.
