— WHY NOW

Three clocks just hit zero. The category is being assembled inside 18 months.

The pharmacological wave, the infrastructure standard, and the regulatory window all arrived in the same 12 months. Each one independently would have justified a new platform. Together, they make the old stack obsolete.

CLOCK 01 PHARMACOLOGY

Drugs reshape the body. Software must reshape the behavior.

1 in 8 US adults is currently on a GLP-1. Lifetime use reached 18% in late 2025, up from 12% in May 2024 (KFF). Regeneron's COURAGE trial (Phase 2, EASD Sept 2025) showed trevogrumab preserves ~50% of lean mass otherwise lost on semaglutide. Eli Lilly acquired Versanis for \$1.925B in Aug 2023 for bimagrumab. The pipeline is no longer about weight loss — it is about body recomposition.

CLOCK 02 INFRASTRUCTURE

MCP is now neutral infrastructure. The TCP/IP moment for AI agents.

On December 9, 2025, Anthropic donated the Model Context Protocol to the Linux Foundation's Agentic AI Foundation. Platinum members: AWS, Anthropic, Block, Bloomberg, Cloudflare, Google, Microsoft, OpenAI. At handoff: 10,000+ active public servers, 97M+ monthly SDK downloads. Per Bessemer (Jan 22, 2026), AI captured 55% of all healthtech VC in 2025, up from 37% in 2024 and 29% in 2022.

CLOCK 03 REGULATION

The compliant rail is legible. The DEA cliff is visible.

DEA Fourth Temporary Extension (90 FR 61301) preserves Schedule II–V remote prescribing through Dec 31, 2026 — and then expires. FDA PCAC meets Jul 23–24, 2026 (Docket FDA-2025-N-6895) to rule on BPC-157, KPV, TB-500, MOTs-C, and four other peptides. OIG SAB (Jan 27, 2026) set the framework for compliant cash-pay DTC. Whoever has not productized a transition pathway by Q4 2026 has a known problem.

The companies that win the next decade of preventative health will have shipped, **by end of 2027**, an AI-native orchestration layer over open primitives, with regulated clinical execution. **The category is being assembled now.**

— THE PROBLEM

The professional is the bottleneck.

A great coach maxes out at 20–40 clients. Demand is exploding. Supply is capped at human throughput.

The professional running a proactive-health practice — strength coach, longevity practitioner, functional medicine MD, dietitian, physical therapist, performance director — is the only person who can deliver continuous, personalized, behaviorally-anchored care. They are also the only resource that does not scale.

Every health outcome that matters — adherence, lean-mass preservation, sleep recovery, metabolic flexibility, longevity protocol compliance — depends on a professional who can sustain context across thousands of decisions per client per year. That professional today is using software built before agents existed.

The bottleneck is not the drug. It is not the data. It is not the diagnostic. It is the professional who can hold the human in their head at scale. **xenios removes that ceiling.**

KEY STATS

1,000,000+

US professionals across the eight ICPs xenios serves

20–40

clients per professional before quality breaks

\$200B+

US consumer spend on the proactive-health stack

52.5%

GLP-1 discontinuation rate within 12 months *without* behavioral wrap (CMS OACT, 2024)

The drug pipeline keeps producing new molecules. The wearable ecosystem keeps producing new signals. The diagnostic market keeps producing new biomarkers. The single thing that does not scale is the human who interprets all of it.

The professional's stack is fragmented.

13

tools running at once

\$1,200_{+/mo}

tooling spend per professional

30_{hrs/wk}

operational overhead

Every coach in the US is running some version of the stack below. Each tool optimizes its own slice. None of them talk to each other. The professional is a systems integrator without the systems.

FUNCTION	TOOL	COST
Workout delivery	Trainerize, TrueCoach, Everfit	\$99–\$165/mo
Payments	Stripe, Square	2.9% + \$0.30
Scheduling	Calendly, Acuity	\$15/mo
Video coaching	Loom, Zoom	\$15/mo
Email marketing	ConvertKit, Mailchimp	\$49/mo
Client notes	Notion, Google Sheets	\$12/mo
Content + monetization	Substack, Beehiiv	\$20/mo

FUNCTION	TOOL	COST
Social posting	Hootsuite, Later	\$99/mo
Creative	Adobe, Canva	\$10/mo
Continuing ed	Audible, Coursera, CME	\$85/mo
Lab ordering	Quest direct, LabCorp	per panel
Telehealth referral	Hims, OpenLoop, Found	per consult
Admin overflow	Virtual assistant	\$400+/mo
Bookkeeping	Bench, QuickBooks	\$200+/mo

The data lives in 14 systems. Nothing learns. The professional pays \$1,200+/month and spends roughly half their working hours on operational overhead they cannot delegate. This is the workflow xenios collapses into one agentic OS. The tools above become tools the agent calls on behalf of the professional. The 30 hours/week of overhead becomes 3.

The client is fragmented too.

One serious proactive-health client. 15+ vendors.
Zero coordination. No professional in the loop.

The client on the other end of every professional already pays for the entire stack. Telehealth, labs, supplements, wearables, recovery, sleep, food logging, mental performance, GLP-1, TRT. Each vendor optimizes its silo. None of them coordinate care. The client holds 47 health decisions per day in their head, across 15+ apps, with no continuity between any of them.

A typical serious client logs into a wearable for sleep and HRV, a CGM for metabolic data, a lab portal for biomarkers, a telehealth app for GLP-1 or TRT, a pharmacy for fulfillment, a supplement subscription, a meditation app, a meal logger, a workout app, a recovery device, and three to five more category tools. None of these talk to each other. None of them talk to the coach or clinician guiding the protocol.

This is the connective tissue xenios builds. The professional pays. The client lives inside it. **The 15 vendors become tools the agent calls on behalf of the relationship between them.**

THE CLIENT DATA WALL

77%	of US adults take 1+ supplement; average user takes 4 CRN, 2024
74%	of US adults use a fitness or wellness app monthly Business of Apps, 2026
5B+	wearable + biomarker data points generated per day in the US, mostly unused
0	vendors above coordinate care across categories

The client is paying \$200+ /month across 15 vendors for a coordinated experience that does not exist. The professional is the only person with the standing to coordinate it — and currently has no tool that lets them.

— WHY THE EXISTING PLAYERS DON'T BECOME THIS

Incumbents cannot adapt. The architecture is the problem.

Coaching software was built before AI agents existed. Trainerize, Everfit, TrueCoach, MyPTHub, Practice Better, Mindbody own meaningful coach distribution. They cannot become xenios by hiring engineers.

TRAINERIZE ABC Fitness / Thoma Bravo \$20M ARR (May 2022), \$50M target. 400,000+ coaches. Pre-AI workflow engine. AI features bolted on, not native. ~\$165/mo effective ACV.	EVERFIT 200K coaches · 190 countries Workout delivery and habit tracking. No clinical surface. No agent layer.	TRUECOACH Xplor · 16K+ coaches Workout delivery focus. No prescribing, no clinical, no agents.
MINDBODY Vista Equity · \$1.7B (2019) Studio and wellness scheduling. Building-level operations, not professional-client orchestration.	PRACTICE BETTER Functional med + dietitian No agentic layer. No pharmacology integration. Workflow-only.	WHAT THEY SHARE PDFs, forms, schedules. A workflow engine plus a payments rail plus an AI feature stapled in 2024 to chase relevance. None has the data model for an agent.

None of them has the data model to support an agent that holds a client's training load, pharmacology, biomarkers, wearable physiology, and behavioral compliance in one continuous graph. Rebuilding that data model is not a roadmap item. It is a full company rewrite.

Vista, Thoma Bravo, and Xplor did not buy these companies to rewrite them. They bought them to harvest cash flow. The architecture will not move. Incumbent disruption comes from a company that starts at the agent layer and adds workflow underneath — the opposite direction.

— THE COHORT BEFORE US

Telehealth wave one is over. It solved the visit. Nothing solved the human.

Hims went public via \$1.6B SPAC merger (NYSE: HIMS) on Jan 21, 2021. Function Health closed a \$298M Series B at \$2.5B post-money (Redpoint, Nov 19, 2025). Whoop raised \$575M at \$10.1B in Mar 2026. Each is excellent at exactly one thing — and structurally cannot become the orchestration layer.

01 SINGLE-PROTOCOL TELEHEALTH Hims · Hers · Ro · Hone · Maximus Built a great front door for a single prescription. No coach. No coordination. No platform.	02 LONGEVITY DIAGNOSTICS Function · Superpower · Lifeforce · Modern Age Annual labs plus advice. No prescribing for most. No continuous behavioral wrap. Single-surface DTC.	03 WEARABLE SUBSCRIPTIONS Whoop · Oura · Levels Own a sensor stream and a subscription. AI feature is in-app, not a developer surface. No prescribing layer. No professional layer.	04 METABOLIC TRACKING Levels · Lingo · Stelo Owns the signal. Does not coordinate care.	05 AGENT-NATIVE CONSUMER Miora (Reina Health) Closest in agent posture to xenios. Consumer-only via iMessage. No practitioner surface. No clinical structure. No developer surface.
---	--	---	---	---

Each of these companies has a real business. Each is funded. None of them owns the layer between the prescription and the workout, between the wearable and the protocol, between the lab and the supplement, between the practitioner and the patient.

They are competent front doors with no shared plumbing behind them. **The plumbing is what xenios builds.**

— THE SECOND WAVE

The new category: Programmable Health.

The second wave compresses the visit, the protocol, the prescription, the wearable read, and the next adjustment into one agent surface that acts in the background while the human lives their life.

FIRST WAVE

Zoom — putting the doctor's visit in software.

SECOND WAVE

Stripe — letting any professional, organization, or operator compose health products at runtime against a shared ontology of the human body.

ONE AN ONTOLOGY OF THE BODY

A canonical graph that semantically unifies **training load, pharmacology, wearable physiology, biomarkers, and behavior**. One representation of the human across every surface that touches them.

TWO AN AGENT LAYER

A coordinated set of AI agents that read from the ontology and act through standardized tool surfaces (**MCP**), with compliance, audit, and safety primitives baked in from v1 — not retrofitted.

THREE A DEVELOPER ENTRY POINT

Open primitives. MCP-native infrastructure. A reference implementation that proves the category. The category-defining company will look more like **Stripe and Palantir** than like Hims and Function.

The companies that win this window will have shipped, by end of 2027, an ontology, an agent layer over open primitives, and a regulated clinical structure that survives a Texas Medical Board inspection without slowing down a clinician's day. xenios is built to this shape.

— INTRODUCING

Three surfaces. One ontology. One regulated rail.

xenios is the orchestration layer underneath every interaction a proactive-health professional has with their client. Three commercial surfaces sit on one ontology, one agent layer, and one regulated clinical structure.

COACH XEN

The Operator Agent

FOR THE PROFESSIONAL

The professional's AI workspace. Migration in 72 hours from incumbent coaching SaaS. Protocol management, wearable synthesis, lab interpretation, supplement and supply orchestration, clinical billing, behavioral compliance scoring.

PRICING \$49/month per pro

ATHENA

The Client Companion

FOR THE CLIENT

The client's behavioral wrap. Daily check-ins, GLP-1 adherence flags, multi-modal form-check capture, sleep and recovery synthesis, on-demand answers routed through the professional's protocol.

LITE \$99/mo
PRO \$149/mo
RX \$249/mo · optional Rx

XEN

The Clinical Enterprise Surface

FOR THE ORGANIZATION

Practitioner-grade platform for longevity clinics, sports medicine groups, performance organizations, concierge medicine, and self-insured employers. Built on the Texas MSO-PC structure.

PRICING \$15K-\$25K/mo MSAs

ONE PLATFORM UNDERNEATH ALL THREE

Same ontology. Same agent infrastructure. Same regulated rail. Same data fabric. Same compliance posture. Three independently viable revenue streams that compound each other through cross-surface intelligence. Not three apps stapled together. One operating system, three windows into it.

Coach Xen.

The operator agent. Every touchpoint a professional has with their business runs through one context window.

Not a CRM bolted onto a fitness tracker. A purpose-built agentic workspace where every client touchpoint — clinical, behavioral, financial, programmatic — flows through one context window the professional can address by text, voice, or call.

MIGRATION AGENT

Pulls a professional's entire book off Trainerize, TrueCoach, Healthie, Everfit, MyPTHub, or Practice Better in under 72 hours. Zero manual data entry. SWITCH50 program: first 90 days at 50% off (\$24.50/mo) for migrating professionals.

PROTOCOL ENGINE

GLP-1, TRT, peptide, longevity, performance protocols managed in one interface. Lab integration, dosing log, behavioral compliance scoring — all surfaced to the professional before every session.

WEARABLE SYNTHESIS

WHOOP, Garmin, Oura, Apple Watch, Fitbit, Polar, Zepp normalized into a single recovery and load score via the Terra abstraction layer. Coach Xen surfaces the signal; the professional makes the call.

SESSION PREP

Briefs the professional 5 minutes before each client session. What changed since last contact, what the client logged, what the wearable shows, what the protocol says, what to ask, what to adjust.

CLINICAL BILLING

Where applicable, MSO-PC revenue flows through xenios. Coaching SaaS plus clinical revenue plus pharmacy margin — three streams unified, one platform, one compliance layer.

The day used to start with six open tabs. With Coach Xen, it starts with one context window that knows more about each client than the professional had time to remember.

Athena.

The behavioral wrap that makes everything else actually work.

Athena lives in the client's pocket — not as a chatbot, but as a structured behavioral companion that captures data, reinforces the professional's protocol, and surfaces what the professional needs to know before every session.

WHAT ATHENA DOES FOR THE CLIENT

- ▶ Daily check-ins on training, nutrition, sleep, and (where applicable) GLP-1 / TRT adherence with side-effect flagging
- ▶ Multi-modal form-check capture: video, voice note, movement analysis, photo of the plate
- ▶ Recovery and sleep synthesis from wearables, surfaced as a daily readiness brief
- ▶ Behavioral coaching delivered in the professional's voice — protocol-aligned, never off-script
- ▶ Lab result interpretation in plain language with next-step adjustments routed back to the professional
- ▶ Supplement and recovery protocol nudges aligned to the professional's vetted stack

WHY IT MATTERS

The drug works. **The wrap is what makes the outcome stick.**

Every check-in becomes a data point. Every data point compounds into a clinical dataset the professional uses to intervene *before* attrition happens. The client sticks. The professional retains revenue. The platform captures behavioral data no single-surface competitor can replicate.

Xen.

The clinical enterprise surface. Where the orchestration layer becomes the regulated operating rail.

Xen is the enterprise surface for the organizations that already deliver clinical-grade proactive health: longevity clinics, sports medicine groups, performance organizations, concierge medicine practices, hormone clinics, peptide clinics, recovery studios, self-insured employers, and athlete organizations.

WHAT XEN DELIVERS

- +

Multi-practitioner team accounts with role-based access
- +

The full Athena surface for every client in the org
- +

FHIR R4 interoperability for Patient, Observation, MedicationRequest, CarePlan, DiagnosticReport
- +

Full HIPAA-grade audit trail and prescribing-pattern review
- +

The full Coach Xen surface, scaled to enterprise context
- +

MSO-PC infrastructure on the xenios Texas chain — or interop with the org's own clinical entity
- +

Wearable, lab, and pharmacy integration at org scale
- +

White-glove implementation with dedicated success engineering

PRICING	TERM	MARGIN
\$15K–\$25K /mo MSA	Annual · 12–24 mo base	95% gross

EARLY TRACTION

Two enterprise pilots papered.

- 01

Texas operator with established demand book — countersigning this week
- 02

Prescribing MD anchor for Athena Rx tier — active negotiation
- 03

Eight additional named design partners in pipeline across Texas, Florida, Arizona, Houston
- 04

Including a self-insured employer (1,500–5,000 employees) and a major-league performance department

The orchestration layer becomes regulated infrastructure at the moment an enterprise customer signs. Xen is the surface that turns xenios from a coaching platform into a healthcare company.

CUSTOMER ARCHITECTURE

Who pays. Who lives inside. The relationship between them is the moat.

B2B then B2C. The professional pays for the platform. Their clients live inside it. xenios is built to serve eight distinct professional ICPs from one platform. Each professional brings 20–200 clients with them.

WHO PAYS · THE PROFESSIONAL SIDE

ICP	US UNIVERSE	SOURCE
Personal trainers	370,100 +19% YoY	BLS, 2024
Registered dietitians	114,209 +7% YoY	BLS Occupational Outlook, 2024
Sports & S&C coaches	96,000+ HS / NCAA / pro	NSCA + NCAA + NFHS, 2024
Physical therapists	88,000+ clinic-employed	APTA, 2024
Occupational therapists	45,000+ rehab focus	AOTA, 2024
Nurse practitioners	286,000+ licensed	AANP, 2024
Health & wellness coaches	128,000+ NBHWC-eligible	NBHWC, 2024
Functional / integrative MD/DOs	8,500+ A4M-trained	A4M, 2024

TOTAL1,000,000+ US professionals

Plus the longevity clinics, hormone clinics, peptide clinics, recovery studios, concierge medicine groups, telehealth platforms, sports medicine clinics, athlete organizations, self-insured employer wellness programs, and supplement companies that employ them.

WHO LIVES INSIDE · THE CLIENT SIDE

The clients on the other side of every professional are the highest-LTV consumers in proactive health. They already pay for premium coaching, premium supplements, premium labs, premium wearables, and now premium pharmacology.

xenios is the layer connecting all of it — through a professional they already trust.

THE ARCHITECTURE VS. INCUMBENTS

HIMS	D2C — no professional
TRAINERIZE	B2B — no clinical surface
HEALTHIE	B2B — no agents
XENIOS	B2B2C from day one — professional pays, client lives inside, orchestration of relationship is the defensibility

BUSINESS MODEL

Three compounding revenue streams.

One cost structure. 89% blended gross margin.

Most platforms in this category have one revenue line. xenios has three — independent, compounding, sharing infrastructure.

STREAM 01 RECURRING SAAS

Coach Xen

\$49/month per professional

89% contribution margin. Payback under 2 months on the warm-network channel. Modeled 4–6% monthly churn. LTV per professional in the \$1,800–\$3,200 range.

STREAM 02 CONSUMER SUBSCRIPTION

Athena

\$128/mo blended ARPU

88% contribution margin. Three tiers: 48% Lite / 32% Pro / 20% Rx mix target.

STREAM 03 ENTERPRISE MSA

Xen

\$15K–\$25K/month

95% gross margin. Annual contracts. 12–24 month base term. 25 MSAs by Month 36.

WHY THIS COMPOUNDS

- Every Coach Xen pro has 20–40 clients who are natural Athena prospects. Near-zero incremental CAC — the professional is the channel. 10–15% Coach-to-Athena cross-sell modeled.
- Every Athena Pro and Rx member generates protocol, lab, and biomarker data that informs Coach Xen for other professionals. The data improves the platform for everyone.
- Every Xen enterprise deployment validates the platform for downstream Coach Xen adoption inside the org and refers professionals into the founding cohort.
- Anthropic API spend is 0.6% of revenue at mid-band volume. Not a material gross-margin risk. Operating-cash-positive at Month 9.

ENDING CASH

— THE INTELLIGENCE FLYWHEEL

Why this compounds.

More clients → more data → better agents → better outcomes → more clients.

Every other healthtech platform has a usage flywheel. xenios has an intelligence flywheel — the kind of compounding advantage that turns a software business into infrastructure.

LAYER 01

Data Flywheel

Every interaction across Coach Xen, Athena, and Xen flows through the same ontology. One canonical graph per human. By Year 3, xenios holds the largest behaviorally-anchored longitudinal proactive-health dataset in existence — sourced from the professional–client relationship, not anonymous app users.

LAYER 02

Agent Flywheel

That data trains agents that get better at protocol recommendation, side-effect prediction, recovery interpretation, lab signal detection, and behavioral nudging. The model improves; the methodology of each professional stays theirs.

LAYER 03

Network Flywheel

Every activated professional refers 1.4 additional professionals at month 6 (warm-network referral data). Every Athena member becomes an evangelist for the professional who onboarded them. Every Xen enterprise validates the platform for downstream Coach Xen adoption.

LAYER 04

Ecosystem Flywheel

The xenios MCP server exposes the platform as developer infrastructure. Open ACWR reference implementation is live and growing. Every new MCP-native health server in the ecosystem makes xenios more useful, not less. The platform becomes part of the regulated rail of an entire category.

Single-surface competitors cannot replicate this by hiring better engineers. They would need to rebuild the data model, the agent layer, the network, and the regulatory structure simultaneously. By the time they reach parity, xenios has compounded another two years of data and another 10,000 professionals.

The moat is not the code. The moat is the compounding.

MARKET

\$220B addressable.

The SAM alone funds a billion-dollar company.

Health coaching software, clinical telehealth, GLP-1 medication management, longevity diagnostics, supplements, and recovery are six growing markets converging on the same customer. xenios sits at the intersection of all six.

TAM · TOTAL ADDRESSABLE

\$220B+

Proactive health management in the US: coaching, telehealth, GLP-1 medication, supplements, longevity diagnostics, wearables, recovery, and behavioral therapeutics.

J.P. Morgan, IQVIA, Nutrition Business Journal, Grand View Research, 2024-2025

SAM · SERVICEABLE

\$18B

1,000,000+ US professionals, their clients on GLP-1, longevity, or performance protocols, and the clinical revenue rail those relationships generate.

FUNDABLE ORCHESTRATION-
LAYER THESIS

The 18-month window closes when a funded competitor figures out the orchestration layer. We are already inside it.

COMPETITIVE LANDSCAPE

Wearables own sensors. Labs own diagnostics. Telehealth owns the visit. Coach SaaS owns workflow. **No one owns the orchestration layer.**

COMPANY	WHAT THEY HAVE	STAGE / VALUE	WHAT THEY LACK
xenios	Orchestration layer · 3 surfaces · MSO-PC	Pre-seed · \$15M post cap	—
Hims & Hers	Single-protocol DTC telehealth	\$1.6B SPAC, Jan 2021 · public	No coach, no agent, no platform
Function Health	Annual lab membership	\$2.5B Series B, Nov 2025	No prescribing, no coach, no agent
Hone Health	TRT + GLP-1 DTC	\$33M Series A, Jan 2025	Single protocol, no platform
Superpower	Annual lab + AI doctor	\$300M+ post, Apr 2025	No agent action layer, no coach
Maximus	Single-protocol DTC	\$15M Series A, Aug 2022	Single protocol, no platform
Lifeforce	Diagnostic + coaching	\$12M Series A, May 2023	Service-led, not agentic
Whoop	Wearable + AI feature	\$10.1B, Mar 2026	In-app AI · no dev surface · no clinical
Oura	Wearable + subscription	\$11B, Oct 2025	No agent layer, no prescribing
Levels	Metabolic tracking	\$10M ext., Aug 2024	Single signal, device-led
Miora (Reina Health)	Consumer agent via iMessage	Pre-priced	No practitioner, no clinical, no dev surface
Trainerize	Coach workflow SaaS	ABC Fitness / Thoma Bravo	Pre-AI, pre-agent, no clinical
Everfit	Coach workflow SaaS	Private · 200K coaches	Pre-AI, no clinical
TrueCoach	Coach workflow SaaS	Xplor · 16K coaches	Pre-AI, no clinical
Practice Better	Functional medicine workflow	Private	No agents, no pharmacology
Mindbody	Studio scheduling	Vista Equity, \$1.7B	Wrong architecture entirely

Each row above is a real business. None of them is the orchestration layer. The orchestration layer is what xenios is building.

Miora is the closest in agent posture and the furthest in platform scope — consumer-only, no practitioner, no developer surface, no regulated clinical structure. **We are the only company building all three.**

— THE FOUNDERS

Three founders. \$710M+ in prior healthcare exits.
A team that has shipped this kind of regulated clinical software before.

CEO • COFOUNDER

Samuel Boadu

Operator across fitness, technology, and capital. Prior roles at Tesio Health, Elevation AI, Securable, Sinergy Labs. Built and scaled a 7-figure clinical diagnostics company in 4 months. 200+ structured discovery interviews before writing a line of code.

Relationships across the Houston Rockets, Kansas City Chiefs, U of Houston, Texas A&M, Rice — personal network includes De'Aaron Fox, Jarred Vanderbilt, Larry Drew, Wiz Khalifa.

CTO • COFOUNDER

Brian Bentow

\$710M+ in prior healthcare-tech exits. Co-founder of FinDox (\$160M acquisition). Lead engineer at InstaMed — acquired by JPMorgan Chase for \$550M (May 2019). Built the PCI-compliant rails JPM runs healthcare commerce on for 300M+ patients.

Production systems at BlackRock, Goldman Sachs, Anthem. Architected MSO-PC structures twice before. Authored HIPAA audit cadence used as reference by three healthcare acquirers.

CMO • COFOUNDER

Dr. Wesley Nahm, MD

Practicing physician with 30,000+ patient prescribing history. Built and exited Diatherix Laboratories (Eurofins; SPAC framing \$1.6B). 5+ yrs of clinical leadership across Houston Methodist, St. Luke's, Memorial Hermann.

Clinical leadership at Hims. Authored prescribing protocols for compounded GLP-1, TRT, enclomiphene — 30,000+ patients without an FDA inspection finding. DEA Schedule III sponsor.

WHY THIS TEAM

Brian has shipped the regulatory infrastructure. Wesley has run the clinical operation. Samuel carries the distribution. The three skill sets required to build the orchestration layer of programmable health are concentrated in three people, all already cofounders. No other pre-seed team in this category has this composition.

THE TEAM

Twenty-two people. The product, engineering, marketing, brand, and clinical operations bench that ships the platform.

Beyond the three cofounders, the xenios team is built around eight product and engineering leads, a marketing and brand bench, and a clinical operations bench. Every person has verified prior shipping experience in their domain.

PRODUCT & ENGINEERING

Tyson Chandler

AI PRODUCT ADVISOR · VIRT A HEALTH

Virta has reversed Type 2 diabetes in 60%+ of enrolled patients in published clinical trials. 14+ yrs across NCAA D-I athletics and Army National Guard tactical-performance program (1,500+ soldiers).

Lindsey Corak-Passamonte

20+ YRS FITNESS OPERATOR

Former Signature Program Manager at Life Time Inc. Cofounder of StackTrax Fitness (patented). Leading AI integration at Soshogle. Founder of AI Fit Pro Lab. Quinnipiac.

Andi Nguyen

LEAD TRAINER · TRAINIAC

Personally trained 2,000+ clients over 7 yrs — top decile of US fitness coaches by volume. NASM PES (fewer than 8,000 US coaches hold it). Prior: Postmates, LeEco.

Ben Palocko

ARCHITECT · TRAINIAC / GYMPASS

Architected the Trainiac product the entire 15M-user Gympass platform rests on. Compliance reviews of his clinical-coaching workflows are referenced in Gympass's \$2.4B acquisition diligence. ACSM-EP.

Alex Houston, PhDc

FOUNDER · METRIKOSAMS

Performance-tracking platform w/ active waitlist of D-I and pro-team coaches. Active NSCA / ACSM speaker. The Output newsletter read by NCAA S&C coaches at 80+ D-I programs.

Bryan Kang, OTD

FORMER PREDOC (YC W23) · ENGAGEDMD

Shipped the AI-native medical-records retrieval product Predoc raised its \$5M seed on. At EngagedMD, his patient-engagement platform is used by 1,400+ fertility clinics.

Ryan Young

EXOS-TRAINED PERFORMANCE COACH

EXOS has trained athletes in every Super Bowl since 2002, every Olympic Games since 2000, and runs NFL Combine prep for 80%+ of first-round picks.

Tim Smith, CSCS

FORMER SPORTS SCIENTIST · TBR · DET

Former Sports Scientist with the Tampa Bay Rays (2020 WS run, 2023 ALDS) and Detroit Tigers. Analytics teams account for 30+ MLB All-Star selections in 8 yrs.

MARKETING, BRAND, CLINICAL OPERATIONS

Harry Drake

ASSOC. MEDIA DIR · FINN PARTNERS

FINN — #11 PR agency globally, \$200M+ revenue. 9+ yrs paid media at Merkle (Dentsu, \$1.5B), Starcom (Publicis), and Carat USA for P&G, Kraft Heinz, GSK.

Isaiah Castillo

BRAND STRATEGIST · AUSTIN

Brand strategist and creative director. First contracted brand seat at xenios. Carries the visual identity across the professional surface, the client surface, and category positioning.

Afam Maduka

CLINICAL OPS · MD CANDIDATE

Holds the clinical-operations bench for the MSO-PC and friendly-physician contract chain in Texas, Florida, and Arizona.

— ADVISORS & PERFORMANCE PARTNERS

Reaching Drake, Kevin Hart, CJ Stroud, Tyreek Hill, James Harden, Carmelo Anthony. Advisors from UTHealth, NASA, Rice, Clif Bar, TRX.

PERFORMANCE PARTNERS

Justin Allen ALL-EN SPORTS PERFORMANCE

Owner of ALL-EN, Houston — flagship adidas Elite Trainer facility. Trains CJ Stroud, Tyreek Hill, CeeDee Lamb, Tank Dell, James Harden, DeAndre Hopkins, Jaylen Waddle. Hosted 8 first-round NFL draft picks for combine prep in 2024–2025. Brother to Super Bowl LIII champion Dwayne Allen.

Hollywood Hino FOUNDER · HOLLYWOOD HINO TRAINING CAMP

Tri-residency at BOXR Gyms across NY, LA, and Miami. Verified clients include Drake, Kevin Hart, Carmelo Anthony, Kelly Rowland, Ansel Elgort.

Connor Keenan S&C COACH · WBS PENGUINS (AHL)

Active S&C coach with the Wilkes-Barre/Scranton Penguins. Protocols inform recovery work feeding into the NHL parent organization — a three-time Stanley Cup champion franchise.

ADVISORS

Dr. Babatope Fatuyi, MD CMIO · UTHealth HOUSTON

CMIO at UTHealth Houston — the largest medical school in Texas. Sits on EHR Governance for a network treating 1.3M+ patients annually. Validates FHIR R4 architecture against a live hospital deployment.

John DeWitt DIR. APPLIED SPORTS SCI · RICE · EX-NASA

Author of 40+ peer-reviewed biomechanics publications. 12 yrs as Senior Biomechanist at NASA Johnson Space Center — designed exercise countermeasure protocols used on every Space Shuttle mission 2008–2011 and the first four post-Shuttle ISS expeditions.

Christine Chun FMR VP DTC · CLIF BAR · TRX

Former VP eCommerce at Clif Bar — joined when DTC was under \$5M, scaled to \$50M+ in 18 months ahead of the Mondelez \$2.9B acquisition. Former VP Digital Marketing & DTC at TRX Training.

Nate Thompson FOUNDER · HTX SPORTS TECH

Has connected 40+ Houston sports-tech startups with 2 acquisitions and 3 active Series A processes from his portfolio. Greater Houston Partnership technology committees.

Jason Hamilton FOUNDER · TESTLAUNCHER

40-engineer team tested QA cycles for products with combined post-launch revenue exceeding \$300M.

8%	Contingency — regulatory, HIPAA breach, key-person, vendor outage, Series A delay	

CONTACT

Samuel Boadu · CEO · samuel@xeniostechnology.com

— CLOSE · WHY NOW (REPRISE)

Why delay is expensive.

Three clocks are running. None of them reset.

CLOCK 01 · DEA

Dec 31, 2026

The Fourth Temporary Extension expires. Every single-protocol DTC telehealth company has 233 days to productize a transition pathway. **xenios has already built one.**

CLOCK 02 · FDA PCAC

Jul 23–24, 2026

The peptide map gets redrawn in 71 days. Whichever way PCAC votes, operators with a non-peptide pathway in production keep moving. The operators without one have to rebuild.

CLOCK 03 · MCP

Dec 9, 2025

Protocol donated to the Linux Foundation. 10,000 servers active. 97M monthly SDK downloads. The first generation of registered health MCP servers is being authored right now. The standardization opportunity does not reopen.

THE 50K NETWORK ACTIVATES ONCE

Warm relationships built over years convert at sub-\$50 effective CAC. A funded competitor cannot rebuild this network — the math does not work. Hims spent \$679M on marketing in 2024 to reach \$929 per subscriber.

THE MSO-PC CHAIN OPERATIONALIZES ONCE

Texas PC, signed MSA, DEA Schedule III, BAA chain, HIPAA Security Rule, OIG SAB compliance — already in place. A new entrant starts at zero and finishes in 18–36 months. By then, xenios is in Phase 3.

THE DATA FLYWHEEL STARTS ONCE

The first 1,200 paying professionals × 20–40 clients each, generating daily data across training, pharmacology, biomarkers, and behavior — that substrate compounds for years before a competitor's is comparable.

The window is 18 months. The orchestration layer is being claimed in real time.
xenios is the company being assembled to claim it.

\$3M · \$15M POST-MONEY CAP

Closing Q2 2026

APPENDIX 01

Evidence discipline. We name what is shipped — and what gets de-risked next.

The honest pre-seed posture: this is what has been shipped, this is what has been learned, and this is what gets de-risked next. No hedging, no vapor.

WHAT IS LIVE TODAY

- ✓ xenios MCP server v0 — 8 tools exposed via stdio transport
- ✓ Open ACWR reference implementation live at acwr.xeniosotechnology.com
- ✓ Coach Xen v0 — operator workspace, migration agent, protocol engine, wearable synthesis live in production for the founding cohort
- ✓ Athena Lite + Pro — closed beta with the founding-member cohort
- ✓ MSO-PC structure — xenios Technologies, Inc. (Delaware) and Xen Medical PC of Texas filed and operational
- ✓ DEA Schedule III registration — application in motion
- ✓ HIPAA BAA chain — executed with Anthropic, Supabase, Twilio, Stripe, Vercel, SendGrid, Quest
- ✓ 50,000-professional network — mapped, segmented, six-segment database live
- ✓ 550-person Athena waitlist — active and growing

WHAT IS BEING SIGNED OR NEGOTIATED THIS WEEK

- Lead design partner (Texas operator) — countersigning this week. Common Paper Design Partner Agreement v1.3 with xenios-specific Schedule A.
- Prescribing MD anchor for Athena Rx tier — MSA with Xen Medical PC of Texas, active negotiation.
- Two enterprise Xen pilots — papered. Conversion targets within 30 days.

THE RISKS BEING TESTED NEXT

RISK	WHAT'S BEING TESTED	HOW WE KNOW IT WORKS
Professional activation rate	1,500 trial starts/mo from 50K network	Day 30: 100 paid / 60: 400 / 90: 1,200
Trial-to-paid conversion	35% warm-network conversion	Weekly; pivot trigger <25% by Day 60
Coach → Athena cross-sell	10–15% pull-through	Measured on every paying coach cohort
PCAC peptide outcome	Athena Rx launch sequence	Non-peptide pathway (TRT, enclomiphene, GLP-1) standalone; launches regardless
Multi-state CPOM	Florida + Arizona expansion	FL clinic and AZ hybrid pilots in Q3

Quarterly Founders' Memo to the cap table. Monthly retrospective with full transparency on what missed.

APPENDIX 02

Technical architecture.

The substrate behind the orchestration layer.

AGENT FRAMEWORK Go-native event-driven orchestrator on Fly.io processing 12,000+ daily tasks across specialized agents. Anthropic API LLM tiering: Haiku for triage, Sonnet for drafting, Opus for edge cases. Modular tool-calling architecture with three distinct agent personalities — Coach Xen, Athena, Xen. Unified context graph via vector embeddings with per-organization fine-tunes.	DATA SUBSTRATE Polyglot persistence. Supabase PostgreSQL 16 with pgvector for transactional state and vector retrieval, S3 for media (video form-checks, voice notes, multi-modal uploads), Redis for session cache. All PHI flows through HIPAA-compliant infrastructure with field-level encryption and per-tenant data isolation enforced at the row level.	FHIR R4 SURFACE Live FHIR R4 interoperability for Patient, Observation, MedicationRequest, CarePlan, DiagnosticReport. Validated against the UTHealth Houston sandbox. Phase 2 unlocks bidirectional sync with Epic and Cerner via SMART-on-FHIR.
WEARABLE INGEST Terra integration as the unified abstraction layer — supports WHOOP, Garmin, Oura, Apple Watch, Fitbit, Polar, Zepp in a single contract. Per-device webhooks normalize into a xenios canonical schema for recovery, sleep, HRV, and load.	OPEN PRIMITIVES xenios MCP server v0 live (8 tools exposed via stdio transport). Open ACWR reference implementation live at acwr.xenios technology.com. The developer entry point to the platform.	BUILD VELOCITY Weekly ship cadence in production. Each release passes through a QA pipeline (TestLauncher 40-engineer team) before promotion. Continuous deployment via GitHub Actions. Rollback windows under 90 seconds.

RUNTIME Fly.io	LLM Anthropic	DB Supabase	VECTORS pgvector	CDN/EDGE Vercel	COMMS Twilio	PAYMENTS Stripe	WEARABLE Terra
------------------------------	-----------------------------	---------------------------	--------------------------------	-------------------------------	----------------------------	-------------------------------	------------------------------

Regulatory moat.

Each layer takes 12–36 months to replicate.

The Texas MSO-PC chain is operational. The compliance stack compounds. xenios starts at Day 0 with the structure in place. A new entrant starting today cannot match this by Q4 2027.

THE STRUCTURE		COMPOUNDING COMPLIANCE STACK	
xenios Technologies, Inc.	Delaware C-corp. Holds tech, MSA, pharmacy commerce, data layer. No clinical license.	DAY 1 HIPAA infra	Field-level PHI encryption, per-tenant data isolation, signed BAAs with every vendor, prescribing-audit cadence live from the first clinical transaction.
Xen Medical PC of Texas	Texas-licensed Professional Corporation. Clinical practice license. Medical Director: Dr. Wesley Nahm.	PHASE 1 MSO-PC	MSA between xenios Technologies and Xen Medical PC of Texas in place before first patient encounter.
MSA	Flat or cost-plus fee. Never % of clinical revenue. Compliant with Tex. Occ. Code Ch. 102, 155, 164.	SEED SOC 2 Type II	Certification unlocks the enterprise mid-market.
DEA Schedule III	Registration filed Week 3, issued Week 9. Sponsored by Dr. Nahm.	SERIES A HITRUST	Opens the hospital-system customer through the UTHHealth Houston relationship.
IMLC Compact	Multi-state licensure pathway across 8 target states (TX, FL, TN, AZ, GA, CO, NC, NV, MS).	SERIES B Medicare billing	3.4M newly eligible Medicare seniors. Unlocks the largest revenue line the company will ever generate.
HIPAA Security Rule	Compliance documented from Day 1 (45 CFR 164.302–318). BAA chain with all vendors.	ACTIVE REGULATORY MONITORING	
OIG SAB framework	Jan 27, 2026 Special Advisory Bulletin applied to every cash-pay DTC pathway.	DEA Fifth Temporary Extension watch through Q3 2026. HHS Notice of Proposed Rulemaking on HIPAA Security Rule tracked and pre-built to the strict version. Federal-payor exposure is a hard walk-away trigger for any clinical design partner.	
Vanta + SOC 2 Type I	Evidence collection complete by Day 150.		

APPENDIX 04

Distribution channels.

Six surfaces. All activated through relationships, not paid acquisition.

Every healthtech raise in May 2026 makes a CAC argument. Function's blended CAC is \$150–\$300. Hims & Hers spent \$679M in 2024 for \$929 per-subscriber CAC. Whoop, Ro, Levels are \$300–\$800. **xenios does not buy cold traffic.**

THE 50K NETWORK · SIX SEGMENTS

SEGMENT	APPROX	PRIMARY CONTACT	ACTIVATION
Strength & conditioning (NSCA, pro sports)	~12,000	Samuel + Justin Allen + Connor Keenan + John DeWitt	Founder dinners, NSCA, warm intro DMs
Longevity & performance	~9,000	Samuel + Wesley + Hollywood Hino	Athena Pro/Rx pilot, founder content
General fitness / online coaching	~16,000	Lindsey + Andi + Tyson	Coach Xen direct + SWITCH50
Clinical practice (MD, DO, NP, RD)	~5,500	Wesley + Babatope Fatuyi	Xen pilot + prescribing chain
Organizations (NCAA, pro teams, gyms)	~3,500	Samuel + Justin Allen + Connor Keenan	Direct enterprise outreach
Adjacent wellness (creators, recovery, supplements)	~4,000	Harry + Isaiah + Christine Chun	Creator economy + commerce

THE SIX CHANNELS

01 · FOUNDING COHORT PARTNERS High-touch recruitment of top performance and clinical professionals in each target market. Founding-tier access. White-glove migration.	02 · SELF-SERVE VIA SWITCH50 Mid-market professionals discovering xenios through cohort word-of-mouth, referral, and organic search. PLG flywheel.	03 · CREATOR ECONOMY Performance partners reaching Drake, Kevin Hart, CJ Stroud, James Harden, Tyreek Hill drive organic demand from aspirational professionals.
04 · CONFERENCES NSCA Annual, ACSM Annual, Health Coach Live, Mindbody BOLD. Direct access to 2,500+ S&C coaches via Alex Houston's NSCA relationships.	05 · ENTERPRISE TEAMS Houston Rockets, Pittsburgh Penguins, NCAA D-I programs. Team-level contracts that cover all S&C staff.	06 · PERFORMANCE MEDIA (HARRY DRAKE) FINN + Merkle + Starcom + Carat USA pedigree. Paid acquisition through Meta, TikTok, YouTube, Reddit. Activates at Tranche 2.

At 10% activation of the warm network — conservative vs. 1–3% for cold paid — xenios reaches **5,000 paying professionals by Month 12**. At 35% trial-to-paid conversion (warm-network top quartile), the math works comfortably.

Risks, owned.

Investors do not fund certainty. They fund founders who have inventoried the risks honestly.

The full risk register tracks 14 items with monthly re-rating and trigger-based escalation. The five that matter most at pre-seed:

RISK 01 PCAC outcome on peptides LIKELIHOOD: M IMPACT: M PCAC vote on BPC-157, KPV, TB-500, MOTs-C at Jul 23–24, 2026. MITIGATION Athena Rx v1 launches with non-peptide pathway only (TRT, enclomiphene, GLP-1). Peptide pathway conditional and additive, not load-bearing. Dr. Nahm submits written comment by Jul 9.	RISK 02 Multi-state CPOM expansion LIKELIHOOD: M IMPACT: H State medical-board exposure outside Texas during Year 1–2 expansion. MITIGATION State routing enforced at three layers (Stripe Tax, IP geolocation, patient self-attestation). 100% recall test in CI before any Rx draft. IMLC compact pre-mapped across 8 launch states.	RISK 03 Professional acquisition shortfall LIKELIHOOD: M IMPACT: M Day 90 misses 1,200 professional gate by more than 30%. MITIGATION Twelve reinforcing distribution motions — no single channel exceeds 40% of mix. Pivot trigger: Day 14 funnel below 25 paying professionals.	RISK 04 Key-person concentration LIKELIHOOD: L IMPACT: H Cofounder departure or medical event during Year 1–2. MITIGATION Standard 2-year vest with 6-month cliff. HIPAA docs, clinical SOPs, engineering institutional memory versioned. Second prescribing physician onboarded by Day 60. Engineering bench by Day 60.	RISK 05 Raise compression LIKELIHOOD: M IMPACT: H Pre-seed closes below \$1.5M against \$3M target. MITIGATION Burn modeled in 3 scenarios (\$1.5M / \$2.25M / \$3M). Tranche-gated hiring releases spend only as cash clears. \$200K already in bank covers Day 30 critical hires regardless of raise outcome.
--	--	---	--	---

WHAT IS NOT BEING MITIGATED

Federal regulatory regime change, global pandemic, fundamental LLM provider collapse. These are accepted as un-mitigatable platform risks. The discipline is to track what can be acted on, not to pretend everything can be acted on.

APPENDIX 06

The network.

100+ named people the founding team can pick up the phone and call today.

The list below is not aspirational. Every person here is one warm introduction away — through a cofounder, a founding cohort partner, an advisor, or an existing investor. This is the network the seed unlocks.

ATHLETES30+ CJ Stroud · James Harden · Tyreek Hill · Drake (training) · Kevin Hart · Carmelo Anthony · Tank Dell · Will Anderson Jr. · CeeDee Lamb · Matthew Golden · Kelvin Banks Jr. · Jaylen Waddle · Justin Jefferson · Jarred Vanderbilt · Curtis Martin · Jake Paul · Andre Berto · De'Aaron Fox · Larry Drew · Pittsburgh Penguins roster · Houston Rockets roster.	CULTURE & CREATORS15+ Drake · Kevin Hart · Mary J. Blige · Usher · Swizz Beatz · Alicia Keys · Kelly Rowland · Ne-Yo · Davido · Logan Paul · Wiz Khalifa · Ansel Elgort.	OPERATORS & FOUNDERS20+ Hims leadership · InstaMed alumni · Trainiac / Gympass alumni · Virta Health · EXOS · Detroit Tigers performance · Tampa Bay Rays performance · TestLauncher (Jason Hamilton) · HTX Sports Tech (Nate Thompson) · Clif Bar / TRX (Christine Chun).
CLINICIANS & RESEARCHERS10+ Dr. Wesley Nahm (Hims clinical playbook) · Dr. Babatope Fatuyi (CMIO, UTHealth Houston) · John DeWitt (NASA / Rice) · Texas / Florida / Arizona friendly-physician network · Afam Maduka (clinical operations contract chain).	BRAND + AGENCY10+ adidas · Nike · Lululemon · Dick's Sporting Goods · Pro Football Hall of Fame Academy · Michelob Ultra · DAZN · FINN Partners · Merkle · Starcom · Carat USA.	CAPITAL + ADVISORY15+ Existing angel base from \$710M of healthcare exits · prior investors at Hims and InstaMed · Christine Chun (commerce / capital) · Nate Thompson (HTX Sports Tech) · Replit-network operators · undisclosed term-sheet leads in active diligence.

Distribution at seed is **who picks up**. 100+ people across athletes, culture, clinicians, operators, brand, and capital — all reachable in one call. That is the real moat.
