

xenios. — Website Spec, Revision 3 (Designer + Developer Handoff)

Stealth guardrails (apply to every page, asset, and email). No team-member names. No founder photos. Single inbox: team@xeniosotechnology.com. Instagram @officialxenios, LinkedIn /company/officialxenios. Wordmark is lowercase `xenios.` with the trailing period. All roles remote, Austin preferred. **Drop the advisor role** across every page where it appears. Aggregate prior exits **\$710M+** including **FinDox** and **InstaMed** (frame as "from the team behind"). Live waitlist counter starts at **550**, updates in real time. Visual reference: **healf HX26** — heavy geometric sans, atmospheric gradients, cream + ink palette.

PART 1 — Responsive Design Specification

1.1 Breakpoint System (mobile-first, Tailwind-aligned)

Token	Min width	Target devices
<code>xs</code>	360 px	Pixel, small Android
<code>sm</code>	375 px	iPhone SE, iPhone 14 (375 pt)
<code>sm+</code>	390 px	iPhone 14/15 (390 pt)
<code>sm++</code>	393 px	iPhone 15 Pro, Pixel 8
<code>am</code>	412 px	Samsung Galaxy, larger Android
<code>md</code>	768 px	iPad portrait
<code>md+</code>	820 px	iPad Air portrait
<code>lg</code>	1024 px	iPad landscape, small laptop
<code>xl</code>	1280 px	Desktop
<code>2xl</code>	1440 px	Large desktop
<code>3xl</code>	1920 px	Full HD
<code>4xl</code>	2560 px	QHD / studio displays

Default styles target **360 px and up**. Every component is built mobile-first; larger breakpoints only add or expand. **The 375 px iPhone SE / 14 baseline is the tightest viewport** — every line of

copy, every CTA, every input must remain legible and tappable at 375 × 667 with no horizontal scroll.

1.2 Container Widths

Breakpoint	Container max-width	Side gutter
360-374	100%	16 px
375-389	100%	20 px
390-411	100%	24 px
412-767	100%	24 px
768-819	720 px	28 px
820-1023	760 px	32 px
1024-1279	960 px	40 px
1280-1439	1200 px	48 px
1440-1919	1320 px	56 px
1920-2559	1440 px	64 px
2560+	1600 px (centered)	80 px

1.3 Grid System (CSS Grid, 12-col base)

Breakpoint	Columns	Column gap	Row gap
360-767	4	16 px	24 px
768-1023	8	20 px	32 px
1024-1279	12	24 px	40 px
1280-1919	12	28 px	48 px
1920+	12	32 px	56 px

1.4 Type Scale per Breakpoint

Heading family: **Söhne Breit / Neue Haas Grotesk Display / GT America Mono Bold** (geometric sans, heavy weights only — **no thin or light cuts**). Body: **GT America** or **Inter Tight** at 500–600.

Token	xs (360)	sm (375–390)	md (768)	lg (1024)	xl (1280)	2xl+ (1440+)
Display XL (hero)	40 / 1.02 / -2%	44 / 1.02 / -2%	72 / 1.0 / -2.5%	88 / 0.98 / -3%	104 / 0.98 / -3%	132 / 0.96 / -3%
Display L	32 / 1.05	36 / 1.05	56 / 1.02	68 / 1.0	80 / 1.0	96 / 1.0
H1	28 / 1.1	32 / 1.1	44 / 1.08	52 / 1.05	56 / 1.05	64 / 1.05
H2	24 / 1.15	26 / 1.15	36 / 1.1	40 / 1.1	44 / 1.1	48 / 1.1
H3	20 / 1.2	22 / 1.2	26 / 1.2	28 / 1.2	30 / 1.2	32 / 1.2
Body L	17 / 1.5	17 / 1.5	18 / 1.55	19 / 1.55	20 / 1.55	20 / 1.55
Body M	15 / 1.55	15 / 1.55	16 / 1.6	16 / 1.6	17 / 1.6	17 / 1.6
Eyebrow / caps	12 / 1.2 / +6%	12 / 1.2 / +6%	13 / 1.2 / +6%	13 / 1.2 / +6%	13 / 1.2 / +6%	14 / 1.2 / +6%

Format: `font-size / line-height / letter-spacing`. Never set font-weight below 500. Display text uses 700–800.

1.5 Touch Targets & Safe Areas

- **Minimum tap target: 48 × 48 dp** (covers iOS 44×44 pt minimum and Android 48×48 dp). Buttons get vertical hit padding even when the visual chip is smaller.
- All primary CTAs: **height 52 px at 375 / 56 px at sm+ / 60 px tablet / 64 px desktop**, horizontal padding 20 / 24 / 28 / 32 px.
- Form inputs: **height 52 px at 375 / 56 px sm+ / 60 px desktop**, font-size ≥ 16 px on iOS to suppress automatic zoom (we use 17 px).
- **Safe-area handling for iPhone notch / Dynamic Island:**

```

:root { --safe-top: env(safe-area-inset-top); --safe-bottom: env(safe-area-inset-b
header.fixed { padding-top: max(16px, var(--safe-top)); }
.sticky-cta-bar { padding-bottom: max(20px, var(--safe-bottom)); }
body { padding-left: env(safe-area-inset-left); padding-right: env(safe-area-inset

```

- Viewport meta: `<meta name="viewport" content="width=device-width, initial-scale=1, viewport-fit=cover">`
- Use `100svh` for hero/full-bleed heights (avoids the iOS toolbar jump), with `100dvh` fallback.

1.6 Per-Section Mobile Behavior

Nav — Above `(md)`: horizontal nav with `(xenios.)` wordmark left, links center, "Join Waitlist" CTA right. Below `(md)`: wordmark + hamburger (48×48 hit area). Hamburger opens a full-screen overlay (cream background, ink type, 24 px gutter, links stacked at H2 scale). Counter pill (`(550 on the waitlist · live)`) collapses under the wordmark at 360–374 px.

Hero — `(md+)`: headline left 7 cols, gradient-pill rotating word inline. Below `(md)`: stacked — headline first (Display XL mobile = 40–44 px), rotating pill on its own line at 32–36 px, subhead 17 px, primary CTA full-width, secondary CTA full-width directly below.

Ecosystem constellation — `(1g+)`: animated radial constellation, Xenios node center, 24–32 satellite logos orbiting. Below `(1g)` it simplifies (see Part 3.6).

"Built for" practitioner grid — `(1g+)`: 3 cols. `(md)`: 2 cols. `(sm/xs)`: 1 col, cards full-width with 24 px row gap.

Multi-agent diagram — `(1g+)`: 8-node horizontal hex map with hover states. `(md)`: 2×4 grid. `(sm)`: vertical accordion (one agent visible per row, tap to expand).

Brand marquee — Always horizontal; speed 40 s/cycle desktop, 28 s/cycle mobile (faster feels less empty); two-row offset on `(1g+)`, single row on mobile.

Forms — Inputs always full-width below `(md)`. Two-column form layout only at `(1g+)`.

Footer — `(1g+)`: 4 columns (nav, ecosystem hint, contact, social). `(md)`: 2 cols. `(sm)`: 1 col, accordion-collapsed groups with the wordmark + counter at top.

2.1 Page Slug Map

Slug	Title tag (≤60 char)	Meta description (≤155 char)
/	xenios. — the proactive health OS	The AI-native operating system for proactive and preventive health practitioners. Built in Austin. Join 550+ on the waitlist.
/product	Product — xenios. proactive health OS	Multi-agent AI for coaches, clinicians, and longevity practitioners. Living profiles, protocols, ecosystem connectors, outcomes.
/for-practitioners	Built for proactive health practitioners	Strength coaches, longevity clinicians, GLP-1 specialists, RDs, FM physicians — one OS for proactive practice.
/ecosystem	The proactive health ecosystem	Designed to connect with WHOOP, Oura, Function Health, Levels, Eight Sleep, and the wider proactive health stack.
/network	The practitioner network — xenios.	Agent-to-agent referrals across the proactive health team.
/about	About xenios. — built in Austin	From the team behind \$710M+ in prior exits, including FinDox and InstaMed.
/careers	Careers — xenios. (remote, Austin preferred)	Help build the operating system for proactive health. Remote, Austin preferred.
/waitlist	Join the xenios. waitlist	Early access to the proactive health OS.
/contact	Contact xenios.	team@xeniotechnology.com

2.2 Universal <head> Block (every page)

html

```

2.7 Google Business Profile (GBP) — Local SEO Notes

- Even in stealth, claim **Xenios Technologies** as a GBP listing in Austin, TX with the "service-area business" option (no public address required). Hide the address; set service area to Austin metro + remote.
- Primary category: **Software company**; secondary: **Health consultant**.
- Website link: <https://xeniostechology.com>.
- Single contact email everywhere: team@xeniostechology.com.
- Add brand photos (no founder photos) — wordmark, gradient hero, ecosystem belt.

- Keep NAP (name, address, phone) consistent across LocalBusiness JSON-LD, GBP, and footer.
- Avoid spinning up secondary listings on Bing Places, Apple Business Connect, and Yelp until after public launch — premature listings during stealth dilute brand search.

2.8 GEO (Generative Engine Optimization) — content patterns

Current evidence is clear that no major AI provider has publicly confirmed direct ranking weight for `11ms.txt` itself (Semrush testing, Google's John Mueller comments in 2025, and multiple Q4-2025 audits all point to "useful infrastructure, not a ranking lever"). We deploy it as a **clean navigation hint** for AI fetchers and put real weight on **GEO-friendly content patterns**: `DerivateX`

1. **Question-shaped H2s + 2-4 sentence direct answers.** AI models extract these as cited blocks. Every page must have a "Common Questions" block.
2. **Citable stat lines** in fact-block format: "\$6.3T — *the size of the global wellness economy in 2023 (Global Wellness Institute, 2024).*" One per major section. `Publii`
3. **Clear entity disambiguation.** Always state "xenios. (Xenios Technologies, Austin, TX)" the first time on each page.
4. **Glossary block** on `/product` defining: proactive health OS, agentic AI, multi-agent system, professional network, outcomes layer.
5. **Schema-rich** — FAQPage, Organization, LocalBusiness, BreadcrumbList.
6. **Stable canonical URLs**, semantic HTML (`<article>`, `<section>`, `<dl>`) for fact-pair lists).
7. **No SPA-only rendering** for above-the-fold content — Next.js RSC + static rendering ensures crawlers and AI fetchers see HTML on first byte.
8. **External entity reinforcement** — pursue mentions in industry publications, podcasts, and accelerator pages; consistent off-site mentions are still the strongest GEO signal.

2.9 `/11ms.txt` (root file)

markdown

xenios.

> xenios. (Xenios Technologies) is the AI-native operating system for proactive and

Core facts

- Product: multi-agent AI OS for health practitioners (coaches, clinicians, longevity)
- Headquarters: Austin, TX, USA
- Contact: team@xenios technology.com
- Social: instagram.com/officialxenios, linkedin.com/company/officialxenios
- Status: stealth, pre-seed, waitlist open
- Heritage: from a team with \$710M+ in prior exits, including FinDox and InstaMed

What xenios. does

xenios. gives every proactive health practitioner a multi-agent system that augments

Ecosystem (designed to connect with — not partnerships)

WHOOP, Oura, Apple Health, Garmin, Polar, Fitbit, Eight Sleep, Levels, Lingo (Abbott

Pages

- [Home](https://xenios technology.com/): overview
- [Product](https://xenios technology.com/product): multi-agent architecture, network
- [For Practitioners](https://xenios technology.com/for-practitioners): audience-spec
- [Ecosystem](https://xenios technology.com/ecosystem): integrations
- [Network](https://xenios technology.com/network): agent-to-agent referrals
- [About](https://xenios technology.com/about)
- [Careers](https://xenios technology.com/careers): remote, Austin preferred
- [Waitlist](https://xenios technology.com/waitlist)
- [Contact](https://xenios technology.com/contact)

2.10 Internal Linking Strategy

- Homepage → Product (3 contextual links), For Practitioners (2), Ecosystem (1), Network (1), Waitlist (3 — hero, mid, footer).
- Every subpage links **back to /** in the wordmark and to **/waitlist** in the sticky CTA.
- **Hub-and-spoke:** /product is the hub; each capability section deep-links to a related page (Ecosystem, Network, About).
- Anchor text uses target keywords — "proactive health OS", "agent-to-agent referrals", "ecosystem connector", not "click here".
- Footer carries the full nav for crawl depth.

2.11 Core Web Vitals & Performance Targets

Metric	Target
LCP	< 1.8 s on 4G
INP	< 150 ms
CLS	< 0.05
TTFB	< 400 ms (Vercel edge)
Total transfer (home)	< 700 KB gzipped above-the-fold
Lighthouse Performance	≥ 95 desktop, ≥ 90 mobile
Lighthouse SEO	100
Lighthouse Accessibility	≥ 95

Tactics: Next.js App Router with RSC, `next/font` self-hosted, hero gradient as SVG noise (no large bitmap), constellation as inline SVG not Lottie, marquee with CSS `@keyframes` (no JS loop), `next/image` AVIF/WebP, defer all third-party scripts, preconnect to Resend only on form interaction.

PART 3 — Spacing & Layout Rigor

3.1 Vertical Rhythm Tokens

Token	xs/sm	md	lg	xl+
<code>--space-section-y</code> (between top-level sections)	80 px	112 px	144 px	176 px
<code>--space-block-y</code> (between major blocks in a section)	40 px	56 px	72 px	88 px
<code>--space-card-y</code> (card internal padding)	24 px	32 px	40 px	40 px
<code>--space-hero-top</code> (above hero headline)	96 px	120 px	152 px	200 px
<code>--space-hero-bottom</code> (below hero before next section)	80 px	112 px	144 px	176 px

3.2 Safe Margins (no element may touch another within these distances)

- Text block → adjacent text block: **min 24 px** mobile, **40 px** desktop.
- Text block → image/graphic: **min 32 px** mobile, **56 px** desktop.
- Card → card in a grid: **see 3.3.**
- Headline → subhead: **16 px** mobile, **20 px** desktop.
- Subhead → primary CTA: **24 px** mobile, **32 px** desktop.
- Section divider line → content above/below: **48 px** both sides mobile, **80 px** desktop.

3.3 Card Grid Gaps

Breakpoint	Min gap
xs/sm	16 px col, 24 px row
md	20 px col, 32 px row
lg	24 px col, 32 px row
xl+	28 px col, 40 px row

3.4 Max-Widths

- Body prose: **64ch** (reading column).
- Hero/display headlines: **18ch** desktop, **14ch** mobile to force premium line breaks.
- Subhead paragraphs under hero: **48ch** desktop, **32ch** mobile.
- Stat-block paragraphs: **44ch**.
- Card body copy: **36ch**.

3.5 Line-Clamp Rules

- Practitioner audience cards: `line-clamp: 3`.
- Ecosystem brand category cards: `line-clamp: 2`.
- Marquee items: **no clamp** (single-line, fixed height 40 px).
- Career role description on listing: `line-clamp: 2` with "Read role".
- Never use line-clamp on headlines, hero copy, or CTA text.

3.6 Mobile Constellation Simplification

The radial constellation cannot survive under 1024 px without overlap. Render rules:

- **lg+ (≥1024 px):** Full constellation. Center node `xenios.`, 5 concentric rings, 24–32 satellite logos. Slow rotation (60 s/cycle), pause on hover.
- **md (768–1023 px):** Reduced to **center + 12 satellites** in 2 rings. No rotation; gentle parallax on scroll.
- **sm (375–767 px):** Static 3×3 **grid** of 8 brand category chips around a centered `xenios.` glyph (no animation; respects `prefers-reduced-motion`).
- **xs (<375 px):** Stack — `xenios.` at top, vertical list of 6 category labels each connected to the node by a 1 px hairline (CSS pseudo-element). No SVG paths.

`prefers-reduced-motion: reduce` always collapses to the static `sm` variant.

3.7 z-index Policy (single source of truth)

```
css

:root {
  --z-base: 0;
  --z-gradient-bg: 1;      /* atmospheric gradients */
  --z-content: 10;         /* page content */
  --z-sticky-cta: 40;       /* mobile sticky bar */
  --z-nav: 50;              /* fixed nav */
  --z-modal-backdrop: 80;
  --z-modal: 90;
  --z-toast: 100;
}
```

No element may set `z-index` outside this scale. No `z-index: 9999` anywhere.

3.8 Atmospheric Gradients — Stacking Context Rules

Gradients always live in a **dedicated layer** at `--z-gradient-bg` inside a wrapper that is a stacking context (`position: relative; isolation: isolate;`). The text layer above always carries a minimum **WCAG AA contrast ratio of 4.5:1**.

- Gradient backgrounds use `radial-gradient` from cream `#F5F1E8` at center to ink `#0E0E10` only at corners — never reverse.
- Behind any text block, apply a `--gradient-veil` overlay: `linear-gradient(rgba(245,241,232,0.6), rgba(245,241,232,0.85))` on dark sections, or `rgba(14,14,16,0.06)` on cream.
- Test contrast at the **densest** point of the gradient, not the average.
- Gradient blob SVGs are `pointer-events: none` always.

3.9 Anti-Overlap Enforcement (developer checklist)

- ☐ No section uses negative margin > 8 px.
 - ☐ No card has `position: absolute` without a wrapper that reserves equivalent space.
 - ☐ All hero text columns have a minimum `padding-right` of 48 px desktop so they never collide with a gradient blob.
 - ☐ The constellation graph's bounding box never exceeds **80% of viewport width** on any breakpoint.
 - ☐ CTA buttons reserve `min-height` even before icons load.
-

PART 4 — Updated Homepage Copy & Structure

4.1 Page Skeleton

1. **Nav** (sticky, transparent → cream on scroll)
2. **Hero** — rotating-word kinetic headline + counter pill + CTAs
3. **Who's Signing Up** — stat strip (practitioner archetypes)
4. **The Proactive Health Movement** — context block with citable stats
5. **Built For** — 18-card practitioner grid (3/2/1 col)
6. **Ecosystem** — moving brand marquee (48 names)
7. **The Multi-Agent OS** — eight-agent diagram + capabilities
8. **The Practitioner Network** — agent-to-agent narrative
9. **Living Profile / Protocol / Outcomes** — three-capability strip
10. **New Revenue Streams** — practitioner upside

HERO

xenios. is the proactive health OS for [rotating word].
Connecting every dot in the proactive health ecosystem.

[Join the waitlist →] [How it works]

550+ practitioners already in line — from boutique strength studios to longevity clinics, GLP-1 programs, and pro-sports performance teams.

Counter pill (above headline, eyebrow scale): ● 550+ on the waitlist · live

WHO'S SIGNING UP — stat strip (chips, scrollable on mobile)

Boutique strength studios · Longevity clinics · GLP-1 programs · Functional medicine practices · Pro-sports performance teams · RDs and nutrition coaches · Concierge clinicians · Peptide protocol practices

Subline: *"Built for the people who work with WHOOP, Oura, Function Health, Levels, Eight Sleep, and the rest of the proactive health stack."*

PROACTIVE HEALTH MOVEMENT — context block

The proactive health economy is the largest, fastest-growing health market on earth.

The global wellness economy reached **\$6.3 trillion in 2023** and is projected to hit **\$9 trillion by 2028** (Global Wellness Institute, 2024). Cash-pay wellness, GLP-1 prescribing, longevity diagnostics, and continuous biometrics are reshaping primary care faster than any incumbent EMR can keep up. (PRWeb) (Yahoo Finance)

The practitioners building this future — coaches, longevity clinicians, GLP-1 specialists, RDs, FM physicians — have been running their entire practice across a **dozen disconnected tools**. xenios. is the OS that finally unifies them.

BUILT FOR — 18-card grid (also feeds rotating-word list)

Strength coaches · Longevity clinicians · GLP-1 specialists · Functional medicine MDs · Registered dietitians · Nutrition coaches · Sleep coaches · Hormone therapy practitioners · Peptide protocol practices · Sports performance coaches · Recovery coaches · Mental performance coaches · Endurance coaches · Concierge clinicians · Corporate wellness directors · Pelvic health PTs · Pre/postnatal coaches · Health & life coaches

Each card: eyebrow (category), one-line value prop, soft gradient corner glow, 48-px hit area.

ECOSYSTEM MARQUEE — see Part 6 for the full list and implementation.

Designed to connect to every dot.

xenios. is the operating system; the ecosystem is the field it plays on.

THE MULTI-AGENT OS

An OS, not an app. Agents, not workflows.

Every practice gets a team of specialized agents that work **in your voice, under your judgment, never replacing you**. They onboard your clients, write protocols in your style, check in on schedule, communicate with intelligence, surface education, track outcomes,

send invoices, and stay compliant — so you can serve **10x to 100x the clients with 10x the depth of care.**

The eight agents (each gets its own row in the diagram):

Agent	Role
Onboarding Agent	Intake forms, wearables pairing, history, baseline labs
Protocol Agent	Programming in the practitioner's voice and modality
Check-in Agent	Scheduled and adaptive touch points
Communication Agent	Async messaging, summaries, nudges
Education Agent	Personalized content, micro-lessons, just-in-time guidance
Outcomes Agent	Biomarker, behavior, and subjective tracking
Billing Agent	Invoicing, subscriptions, HSA/FSA flagging
Compliance Agent	HIPAA-aware logging, scope-of-practice guardrails

THE PRACTITIONER NETWORK

The proactive health team that finally talks to itself.

A personal trainer hands off to an RD. The RD pings a functional medicine MD for a lab review. The MD sends a longevity panel to the client's diagnostics provider. The recovery coach loops in for return-to-training.

On xenios., that handoff happens **agent-to-agent** — context preserved, scope respected, client experience seamless. Referral revenue routes back to the originator automatically.

LIVING PROFILE / PROTOCOL / OUTCOMES — three-capability strip (kept from prior revision).

NEW REVENUE STREAMS

Growth no competitor can offer.

Because xenios. is the OS layer — connected to wearables, labs, GLP-1 pharmacies, supplements, and the practitioner network — every practitioner unlocks revenue lines that have been locked away inside disconnected platforms.

Ten chips (see Part 7 for full prose):

1. Outcome-based pricing

2. Recurring digital products
3. Agent-managed group cohorts
4. Transparent affiliate / device revenue
5. Network referral revenue
6. Lab & longevity reorder revenue
7. GLP-1 and peptide protocol revenue (where lawful)
8. Corporate wellness contracts
9. HSA / FSA-eligible cash-pay services
10. Concierge / 24-7 agent tier

HERITAGE BLOCK (no names)

Built by operators behind \$710M+ in prior exits — including FinDox and InstaMed.

Stealth. Pre-seed. Building in Austin.

PART 5 — Rotating-Word Hero (Implementation)

5.1 The 18 Rotating Practitioner Types (cycle order)

1. strength coaches
2. longevity clinicians
3. GLP-1 specialists
4. functional medicine physicians
5. registered dietitians
6. nutrition coaches

7. sleep coaches
8. hormone therapy practitioners
9. peptide protocol practices
10. sports performance coaches
11. recovery coaches
12. mental performance coaches
13. concierge clinicians
14. corporate wellness directors
15. pelvic health PTs
16. pre/postnatal coaches
17. endurance coaches
18. health & life coaches

(14-18 honored; 18 used so it matches the Built For grid.)

5.2 Gradient Pill Spec

- Pill background: `linear-gradient(110deg, #F4B98A 0%, #E8836E 38%, #B964D4 72%, #5D7CFF 100%)` with 12% noise overlay (SVG).
- Pill border-radius: `9999px`.
- Padding: `12px 24px` mobile, `16px 32px` desktop.
- Type inside pill: **ink** `#0E0E10`, weight 800, italic OFF, tracking -2%.
- Subtle outer glow: `0 8px 32px rgba(232, 131, 110, 0.25)`.
- Inline-block, baseline-aligned with surrounding headline.

5.3 Motion Timing

- Dwell per word: **2200 ms**
- Transition: **450 ms** total — outgoing word slides **up 24 px + fades to 0** while incoming word slides **from down 24 px + fades from 0**.
- Easing: `cubic-bezier(0.22, 1, 0.36, 1)` (gentle, organic).
- Pill itself **does not** move; only the inner word swaps. The pill width animates with `layout` to fit the new word (Framer Motion `layout` prop).
- Respect `prefers-reduced-motion`: instant swap, no slide, dwell extended to 3500 ms.

5.4 React + Framer Motion Implementation

tsx

```
// components/RotatingHero.tsx
"use client";
import { useEffect, useState } from "react";
import { motion, AnimatePresence, useReducedMotion } from "framer-motion";

const ROLES = [
  "strength coaches","longevity clinicians","GLP-1 specialists",
  "functional medicine physicians","registered dietitians","nutrition coaches",
  "sleep coaches","hormone therapy practitioners","peptide protocol practices",
  "sports performance coaches","recovery coaches","mental performance coaches",
  "concierge clinicians","corporate wellness directors","pelvic health PTs",
  "pre/postnatal coaches","endurance coaches","health & life coaches",
];

export default function RotatingHero() {
  const [i, setI] = useState(0);
  const reduced = useReducedMotion();
  const dwell = reduced ? 3500 : 2200;

  useEffect(() => {
    const id = setInterval(() => setI((p) => (p + 1) % ROLES.length), dwell);
    return () => clearInterval(id);
  }, [dwell]);

  return (
    <h1 className="font-display text-[40px] sm:text-[44px] md:text-[72px] lg:text-[80px]">
      xenios. is the proactive health OS for{" "}
    <motion.span
      layout
      transition={{ layout: { duration: 0.45, ease: [0.22, 1, 0.36, 1] } }}
      className="inline-flex items-center align-baseline rounded-full px-6 py-3 lg:px-8 lg:py-4"
      style={{
        background:
          "linear-gradient(110deg,#F4B98A 0%,#E8836E 38%,#B964D4 72%,#5D7CFF 100%)",
        boxShadow: "0 8px 32px rgba(232,131,110,0.25)",
      }}
    >
    <AnimatePresence mode="popLayout" initial={false}>
      <motion.span
        key={ROLES[i]}
        initial={reduced ? { opacity: 0 } : { y: 24, opacity: 0 }}
        animate={{ y: 0, opacity: 1 }}
        exit={reduced ? { opacity: 0 } : { y: -24, opacity: 0 }}
      />
    </AnimatePresence>
  )

```

```

        transition={{ duration: reduced ? 0.01 : 0.45, ease: [0.22, 1, 0.36, 1]
        className="whitespace-nowrap"
      >
        {ROLES[i]}
      </motion.span>
    </AnimatePresence>
  </motion.span>
  .
</h1>
);
}

```

CSS-only fallback for `<noscript>`: pill shows "proactive health practitioners".

PART 6 — Ecosystem Brand Marquee

6.1 Display Rules

- **Designed to connect to / compatible with** — never "partner with" anywhere on the site.
- Logos rendered as **monochrome ink wordmarks** (no color logos, no trademark conflicts). On hover, the wordmark gets the gradient overlay (CSS `mask-image`).
- Disclaimer line under the marquee: *"Brand names are property of their respective owners. xenios. is designed to connect with the proactive health ecosystem; integration availability varies by partner."*

6.2 The 52 Names (organized into 12 clusters)

Wearables & biometrics: WHOOP · Oura · Apple Health · Garmin · Polar · Fitbit · Coros

Continuous glucose & metabolic: Levels · Lingo · Dexcom · Stelo · Abbott

Labs & diagnostics: Function Health · Superpower · Inside Tracker · Marek Health · Hone · Quest · Labcorp

Longevity imaging & screening: Ezra · Prenuvo · Neko Health

GLP-1 & metabolic Rx: Zepbound · Wegovy · Ozempic · Mounjaro · compounded GLP-1 programs

Peptide & advanced protocols: BPC-157 protocols · semaglutide programs · tirzepatide programs · retatrutide programs

Supplements: Thorne · Pure Encapsulations · Momentous · Designs for Health

Recovery & sleep: Hyperice · Therabody · Plunge · Eight Sleep · Whoop Recovery

Nutrition tracking: Cronometer · MacroFactor · MyFitnessPal

Mental performance & mindset: Headspace · Calm · Othership · Open

AI foundations: Anthropic · OpenAI

Training context (compatible export, not integration): TrueCoach exports · Trainerize exports

Compliance & billing infra (backend only): Stripe · Plaid

Disclaimer copy stays visible. Cluster headings are eyebrow-cap style above marquee rows.

6.3 Marquee Implementation

Two-row marquee on `lg+`, single-row on mobile. Rows scroll in **opposite directions** for depth.
Pure CSS — no JS — to keep it 60 fps.

tsx

```
// components/EcosystemMarquee.tsx
export default function EcosystemMarquee({ items }: { items: string[] }) {
  return (
    <div className="relative overflow-hidden mask-fade-x py-4">
      <div className="flex gap-12 animate-marquee whitespace-nowrap will-change-transform">
        {[...items, ...items].map((n, idx) => (
          <span key={idx} className="font-display text-2xl lg:text-3xl text-ink/70 h">
            {n}
          </span>
        ))}
      </div>
    </div>
  );
}
```

css

```
@keyframes marquee { from { transform: translateX(0); } to { transform: translateX(-100%); }  
.animate-marquee { animation: marquee 40s linear infinite; }  
@media (max-width: 767px) { .animate-marquee { animation-duration: 28s; } }  
@media (prefers-reduced-motion: reduce) { .animate-marquee { animation: none; transform: none; }  
.mask-fade-x {  
  mask-image: linear-gradient(to right, transparent, black 8%, black 92%, transparent);  
  -webkit-mask-image: linear-gradient(to right, transparent, black 8%, black 92%, transparent);  
}  
.animate-marquee:hover { animation-play-state: paused; }
```

PART 7 — Updated /product Page

7.1 Page Structure

1. Eyebrow + headline: "The proactive health OS."
2. The Seven Capabilities (5 marquee + Practitioner Network + Revenue Layer)
3. Deep dive — Multi-agent architecture
4. Deep dive — The Practitioner Network
5. Deep dive — The Revenue Layer (post-launch)
6. Ecosystem belt
7. Common questions (FAQPage schema)
8. CTA

7.2 The Seven Capabilities

#	Capability	One-liner
1	Living Client Profile	Every metric, every protocol, every conversation in one continuously updated profile.
2	Protocol Engine	Programming, nutrition, recovery, supplementation — written in your voice, adapted in real time.
3	Coach Agent	Your AI second-in-command. Drafts check-ins, summarizes data, never replaces your judgment.
4	Ecosystem Connector	Designed to plug into wearables, labs, CGM, GLP-1, recovery, and nutrition platforms.

#	Capability	One-liner
5	Outcomes Layer	Biomarkers, behavior, and subjective markers tracked into measurable client outcomes.
6	The Practitioner Network (new)	Agent-to-agent referrals across the proactive health team.
7	The Revenue Layer (coming after launch)	Outcome pricing, group cohorts, transparent affiliate flows, network referral revenue.

7.3 Deep Dive — Multi-Agent Architecture

| Eight agents. One practice. Infinite leverage.

Each agent gets a card describing scope, inputs, outputs, and **what it never does** (preserving practitioner authority):

- **Onboarding Agent** — Sends intake, pairs wearables, pulls history, schedules baseline labs. *Never sets a protocol.*
- **Protocol Agent** — Drafts programming, nutrition frames, recovery cycles in the practitioner's documented voice. *Never publishes without practitioner approval until a trust threshold is set.*
- **Check-in Agent** — Runs scheduled and adaptive check-ins; flags drift. *Never makes clinical interpretations.*
- **Communication Agent** — Handles async client messages with summaries, tone-matched drafts, escalation rules. *Never responds without practitioner-defined guardrails.*
- **Education Agent** — Pulls just-in-time micro-lessons matched to the client's protocol and current data. *Never substitutes for clinician explanation.*
- **Outcomes Agent** — Aggregates wearable, lab, subjective, and behavior data into a longitudinal outcome view. *Never diagnoses.*
- **Billing Agent** — Handles invoices, subscriptions, HSA/FSA tagging, dunning, refunds. *Never sets pricing.*
- **Compliance Agent** — Logs PHI handling, enforces scope of practice, alerts on drift. *Never operates outside the configured scope.*

Cross-cutting principles:

- **Voice & judgment first** — every agent loads the practitioner's voice corpus and decision rules.
- **HIPAA-aware** — PHI flagged, encrypted, logged.

- **Agents talk to each other** — shared context, shared client profile, no copy-paste.
- **Agents talk to other practitioners' agents** — see 7.4.
- **100× promise** — one practitioner can now serve **10× to 100× the clients with 10× the depth of care.**

7.4 Deep Dive — The Practitioner Network

| **The proactive health team that finally talks to itself.**

Today, a client wired into proactive health works with five-plus practitioners, none of whom share context. xenios. solves that:

- **Agent-mediated handoff** preserves the full client profile, history, and originating protocol.
- **Scope-aware** — each receiving agent operates only inside its practitioner's scope.
- **Referral revenue routes** automatically back to the originator.
- **Network directory** of xenios. practitioners filtered by modality, geography, verified credentials.

Flow example: *Trainer* → *RD* → *FM MD* → *longevity panel provider* → *recovery coach* → *mental performance coach*. One client. One unified protocol. Six practitioners, all paid, all in context, all in their voice.

7.5 Deep Dive — The Revenue Layer (coming after launch)

| **Growth no competitor can offer.**

Ten new revenue lines unlocked **specifically because** xenios. is the OS + agent + ecosystem layer:

1. **Outcome-based pricing** — charge on measurable client wins, enabled by the Outcomes Layer.
2. **Recurring digital products** — Protocol Agent generates courses, programs, content from the practitioner's existing protocols; sold as evergreen.
3. **Group cohorts** — one protocol, many clients, agent-managed; cohorts of 50 without losing personalization.
4. **Transparent affiliate / device revenue** — supplements (Thorne, Momentous), recovery (Hyperice, Plunge), sleep (Eight Sleep) — disclosed and tracked.
5. **Network referral revenue** — automatic routing when handing off to another xenios. practitioner.
6. **Lab & longevity panel reorder revenue** — recurring revenue on Function Health, Inside Tracker, Hone, Marek panels.

7. **GLP-1 and peptide protocol revenue** where legally permissible in the practitioner's jurisdiction.
8. **Corporate wellness contracts** — one practitioner serves an entire company team via the OS.
9. **HSA / FSA-eligible cash-pay services** flagged automatically by the Billing Agent.
10. **Premium concierge tier** — 24/7 agent access, white-glove, higher ARPU.

Frame all ten as **enabled by, not promised by** the platform; "coming after launch" applies to the full Revenue Layer module.

7.6 Common Questions (FAQPage)

(Use the five Q&A pairs from Part 2.4 — they back the JSON-LD.)

PART 8 — Everfit Competitive Teardown & xenios. Differentiation

8.1 What Everfit Is

Everfit (everfit.io) is an all-in-one fitness coaching platform: workout programming, meal plans, habit coaching, client messaging, community forums, integrated payments, and white-label apps. Self-described as trusted by **200,000+ fitness coaches and training businesses in 190+ countries**. Pricing starts around **\$16/month** for the Pro tier; Studio at **\$88/month**; an Accelerator bundle around **\$490/year**; an Enterprise tier for multi-location and corporate wellness. Public review themes: praise for ease of use; most common criticism is that add-ons inflate cost and nutrition features lag. (G2 + 4)

8.2 What Everfit Does Well (to learn from, not copy)

- Clean coach-facing UI with a strong workout builder.
- Strong client-facing mobile app with messaging, progress charts, habit tracking.
(Coachingappreviews)
- Autoflow automations (assign forms, auto-messages, training plans based on triggers).
(Everfit)
- Branded apps for studios. (Everfit)
- Hero positioning that **rotates a noun**: "the all-in-one platform for [personal trainers / gym owners / online coaches]." This is the seed of the xenios. rotating-word hero — but xenios. goes more visual, more kinetic, and more practitioner-typed.

8.3 Where Everfit Is Weak / Where xenios. Wins

Dimension	Everfit	xenios.
Scope	Fitness coaches, gyms, studios	All proactive & preventive health practitioners — coaches, clinicians, longevity, GLP-1, FM, RDs, recovery, mental performance
AI model	"AI Workout Builder" — narrow generative feature inside a workflow tool	Multi-agent OS — eight specialized agents working under practitioner judgment
Ecosystem	Workout-centric integrations (MyFitnessPal, Apple Health for HR/steps)	Full proactive stack: WHOOP, Oura, Function Health, Levels, Lingo, Eight Sleep, Inside Tracker, Hone, Hyperice, Therabody, GLP-1 programs, peptides, supplements
Practitioner network	None	Agent-to-agent referrals across the proactive health team
Revenue surface	Subscription billing + selling packages	Ten new revenue lines: outcome pricing, group cohorts, transparent affiliate, network referrals, panel reorder, GLP-1/peptide where lawful, corporate wellness, HSA/FSA flagging, concierge
Clinical scope	Fitness only	HIPAA-aware, scope-of-practice guardrails extend into clinical adjacencies
Design language	Friendly fitness SaaS	Healf-grade editorial: heavy geometric sans, atmospheric gradients, cream + ink

8.4 Positioning Statement vs. Everfit

Everfit gives fitness coaches a better workflow tool. xenios. gives every proactive health practitioner an operating system — and a team of agents — so one practitioner can serve 10-100× the clients with 10× the depth of care, across the entire proactive health ecosystem.

Use this statement in pitch decks; **never name competitors on the public site.**

PART 9 — Fix for the Broken Waitlist Confirmation Email

9.1 Root-Cause Diagnosis (ranked)

1. **Domain not verified in Resend (highest probability).** SPF or DKIM records missing/incorrect; the message is silently dropped or routed to spam without bounce.
`Mailertogo`
2. **From-address using `@xeniosotechnology.com` while only a subdomain is authenticated** — bounces silently.
3. **`RESEND_API_KEY` missing from the Vercel Production environment** (works locally with `.env.local` but fails in prod).
4. **Server action firing but `resend.emails.send()` is not awaited / errors swallowed in a `try/catch` that returns success regardless.**
5. **Gmail spam filtering** without bounce notification — looks like "no email arrived".
6. **Form posting to a placeholder endpoint (`/api/waitlist-placeholder`)** instead of the real handler.
7. **Resend sandbox mode** — emails only deliver to the account-owner address until domain is verified.
8. **React Email template throws at render time** — the server returns 200 because the catch logs but doesn't re-throw.

9.2 Required DNS Records (xeniosotechnology.com)

Add at the DNS provider (Cloudflare/Namecheap/whatever). Click **Verify** in Resend afterward.

`Cloudflare`

```
# SPF (TXT @ root or `send` subdomain — match Resend's instructions)
TYPE: TXT    NAME: send (or @)    VALUE: v=spf1 include:_spf.resend.com -all

# DKIM (TXT, exact records provided by Resend dashboard)
TYPE: TXT    NAME: resend._domainkey.<provided>    VALUE: <provided by Resend>

# DMARC (TXT)
TYPE: TXT    NAME: _dmarc    VALUE: v=DMARC1; p=none;
rua=mailto:team@xeniosotechnology.com; pct=100

# (Optional) MX for bounce return path on the `send` subdomain
TYPE: MX     NAME: send    VALUE: feedback-smtp.us-east-1.amazonses.com    PRIORITY:
10
```

9.3 Required Environment Variables (Vercel: Production + Preview + Development)

```
RESEND_API_KEY=re_XXXXXXXXXXXXXXXXXXXXXXXXXXXXX  
RESEND_FROM_EMAIL=xenios. <hello@send.xeniosotechnology.com>  
TEAM_NOTIFY_EMAIL=team@xeniosotechnology.com  
NEXT_PUBLIC_SITE_URL=https://xeniosotechnology.com  
WAITLIST_TABLE_URL=... # Supabase / Neon
```

The `from` address must live on the **verified subdomain** (`send.xeniosotechnology.com`). Do **not** send from `team@xeniosotechnology.com` (that mailbox is the inbox). Sending from the receiving mailbox is the #1 cause of silent drops.

9.4 Working Implementation

```
tsx
```

```

// app/api/waitlist/route.ts
import { Resend } from "resend";
import { NextResponse } from "next/server";
import { WaitlistConfirmEmail } from "@emails/WaitlistConfirm";
import { InternalAlertEmail } from "@emails/InternalAlert";

const resend = new Resend(process.env.RESEND_API_KEY!);

export async function POST(req: Request) {
  const { email, name, role, source } = await req.json();
  if (!email || !/^[.+\@+\.\.+\./].test(email)) {
    return NextResponse.json({ error: "invalid_email" }, { status: 400 });
  }

  // 1. Persist to DB and get current position
  const position = await persistSignup({ email, name, role, source });

  // 2. Send confirmation + internal alert in parallel
  const [confirm, alert] = await Promise.allSettled([
    resend.emails.send({
      from: process.env.RESEND_FROM_EMAIL!,
      to: email,
      reply_to: "team@xeniosotechnology.com",
      subject: "You're on the xenios. waitlist.",
      react: WaitlistConfirmEmail({ name, position }),
      headers: { "X-Entity-Ref-ID": `waitlist-${position}` },
      tags: [{ name: "category", value: "waitlist_confirm" }],
    }),
    resend.emails.send({
      from: process.env.RESEND_FROM_EMAIL!,
      to: process.env.TEAM_NOTIFY_EMAIL!,
      reply_to: email,
      subject: `[xenios.] new waitlist signup - ${email}`,
      react: InternalAlertEmail({ email, name, role, source, position }),
      tags: [{ name: "category", value: "internal_alert" }],
    }),
  ]);

  // 3. Log failures explicitly – do NOT swallow
  if (confirm.status === "rejected") console.error("CONFIRM_FAIL", confirm.reason);
  if (alert.status === "rejected") console.error("ALERT_FAIL", alert.reason);

  // 4. Best-effort retry on transient failures (one retry, 800 ms back-off)

```

```
if (confirm.status === "rejected") {  
  await new Promise(r => setTimeout(r, 800));  
  try {  
    await resend.emails.send({ /* same confirm payload */ } as any);  
  } catch (e) { console.error("CONFIRM_RETRY_FAIL", e); }  
}  
  
return NextResponse.json({ ok: true, position });  
}
```

Use an API Route Handler rather than a Server Action — logs are easier to inspect in Vercel and you get explicit HTTP statuses.

9.5 React Email Templates

tsx

```
// emails/WaitlistConfirm.tsx
import { Html, Head, Body, Container, Heading, Text, Hr, Link, Section } from "@react-email/components"

export function WaitlistConfirmEmail({ name, position }: { name?: string; position?: string }) {
  return (
    <Html>
      <Head />
      <Body style={{ background: "#F5F1E8", fontFamily: "ui-sans-serif, system-ui", }}>
        <Container style={{ maxWidth: 560, padding: "48px 24px" }}>
          <Text style={{ letterSpacing: 2, fontSize: 12, textTransform: "uppercase" }}>
            <Heading style={{ fontSize: 36, lineHeight: 1.1, marginTop: 24, fontWeight: "bold" }}>
              you're in{ name ? `, ${name}` : "" }.
            </Heading>
            <Text style={{ fontSize: 17, lineHeight: 1.55, marginTop: 24 }}>
              xenios. is the proactive health OS – multi-agent AI for the practitioner
            </Text>
            <Text style={{ fontSize: 17, lineHeight: 1.55 }}>
              We're designed to connect with the proactive stack you already use – WHO
            </Text>
            <Section style={{ marginTop: 32 }}>
              <Link href="https://instagram.com/officialxenios" style={{ color: "#0E0E10" }}>
                <Link href="https://www.linkedin.com/company/officialxenios" style={{ color: "#0E0E10" }}>
              </Section>
            <Hr style={{ borderColor: "#0E0E10", opacity: .15, marginTop: 40 }}/>
            <Text style={{ fontSize: 12, color: "#0E0E10", opacity: .6 }}>
              xenios. · Austin, TX · team@xenios technology.com
            </Text>
          </Container>
        </Body>
      </Html>
    );
  }
}
```

tsx

```
// emails/InternalAlert.tsx
import { Html, Body, Container, Heading, Text } from "@react-email/components";

export function InternalAlertEmail(p: { email: string; name?: string; role?: string; source?: string; position?: string; ts?: string }) {
  return (
    <Html>

9.6 "If email is still not arriving" — troubleshooting checklist

1. **Resend dashboard → Domains** — is `send.xeniosotechnology.com` showing **verified** for both SPF and DKIM?
2. **Resend dashboard → Emails (logs)** — is the message present? Status `delivered`, `bounced`, or `complained`?
3. **Vercel → Project → Logs → Functions** — search `CONFIRM_FAIL` and `ALERT_FAIL`.
4. **Vercel → Environment Variables** — confirm `RESEND_API_KEY` exists in **Production** specifically; redeploy after adding.
5. **Test with `mail-tester.com`** — score must be $\geq 9/10$.
6. **Send to Gmail, Outlook, ProtonMail, iCloud** — check inbox and spam/promotions/junk for each.
7. **View raw headers in Gmail** (`Show original`) — look for `DKIM=PASS`, `SPF=PASS`, `DMARC=PASS`. Any FAIL = DNS issue. (`DEV Community`)
8. **From-address sanity** — `from` must be on a verified domain. Sending `from: team@xeniosotechnology.com` while only `send.xeniosotechnology.com` is verified will silently fail.
9. **Reply-to** — set `reply_to: "team@xeniosotechnology.com"` on the confirmation.
10. **Plain-text alternative** — React Email auto-generates; verify it's present in the raw source.

9.7 Testing Protocol (every release)

1. Submit `<your-name>+test1@gmail.com` on production. Confirm: inbox arrival within 30 s, `team@` alert in the same window.
 2. Repeat with Outlook, ProtonMail, iCloud addresses.
 3. Open the Resend log entry — confirm `delivered`.
 4. Submit an invalid email — confirm 400 and no email sent.
 5. Submit twice with the same email — confirm idempotent (no duplicate row), single confirmation, single alert.
 6. Force a Resend outage by temporarily renaming `RESEND_API_KEY` — confirm the API still returns `{ ok: true, position }` (signup persists), and logs show `CONFIRM_FAIL` + `ALERT_FAIL`. Restore the key.
 7. Run `mail-tester.com` — confirm score $\geq 9/10$ with all auth checks green.
 8. Lighthouse + screen-reader test on the success state.
-

PART 10 — Updated Transactional Emails

All emails share the visual system: cream `#F5F1E8` background, ink `#0E0E10` type, heavy geometric sans, lowercase `xenios.` wordmark, Instagram + LinkedIn footer, single `team@xeniosotechnology.com` reply-to.

10.1 Waitlist Confirmation

Subject: **you're on the xenios. waitlist.** Preheader: *the proactive health OS — early access is coming.*

you're in{, name}.

xenios. is the proactive health OS — multi-agent AI for the practitioners building the future of preventive care.

You're **#{position}** on the waitlist. **550+** and climbing.

We're designed to connect with the proactive stack you already use — WHOOP, Oura, Function Health, Levels, Eight Sleep, Hyperice, Inside Tracker, and more.

Follow along: **Instagram** @officialxenios · **LinkedIn** /company/officialxenios.

When early access opens, you'll hear from us first.

— xenios. Austin, TX · stealth · team@xeniosotechnology.com

10.2 Internal Alert (to team@)

Subject: **[xenios.] new waitlist signup — {email}**

New waitlist signup — #{position}
email: {email}
name: {name}
role/practice: {role}
source: {utm/source}
ts: {iso}

(Monospace, plain. Designed to be fast to triage in any inbox.)

10.3 Contact-Form Auto-Reply (to sender)

Subject: **we got your note.**

we got it.

Thanks for reaching out. The xenios. team reads every message at team@xeniosotechnology.com — we'll come back to you within two business days.

If this is about early access, you can also join the waitlist:

<https://xeniosotechnology.com/waitlist>

— xenios. *Austin, TX* · team@xeniosotechnology.com

Internal companion email to [team@](mailto:team@xeniosotechnology.com) with full message body + sender details, reply-to set to sender.

10.4 Role-Application Auto-Reply

Subject: **your application for {role} at xenios.**

received.

Thanks for applying to {role} at xenios. We read every application personally. If there's a strong fit, we'll come back within seven days. If we don't move forward this round, we'll keep your application on file.

All roles are remote, Austin preferred.

— xenios. team@xeniosotechnology.com

Internal companion to [team@](mailto:team@xeniosotechnology.com) with role, applicant email, attached resume URL, optional links.

10.5 Shared Email Footer Block (every email)

xenios.

the proactive health OS

PART 11 — Launch Checklist (Definition of Done)

11.1 Page-by-Page Updates

/ (Home)

- ☐ Wordmark (xenios.) lowercase with period — every instance.
- ☐ Counter pill (● 550+ on the waitlist · live) above hero.
- ☐ Hero with rotating-word kinetic pill (Part 5).
- ☐ Subhead: "Connecting every dot in the proactive health ecosystem."
- ☐ "Who's signing up" strip.
- ☐ Proactive health movement context block with \$6.3T stat.
- ☐ 18-card practitioner grid (3/2/1 col).
- ☐ Ecosystem marquee with 52 names (Part 6) + ownership disclaimer.
- ☐ Eight-agent diagram + capability cards.
- ☐ Practitioner Network section with handoff narrative.
- ☐ Living Profile / Protocol / Outcomes three-capability strip.
- ☐ New Revenue Streams (10 chips).
- ☐ Heritage block: "\$710M+ in prior exits including FinDox and InstaMed" — no names.
- ☐ Waitlist form with live counter at 550 baseline.
- ☐ Footer with single inbox, Instagram, LinkedIn, "Austin, TX · stealth · 2026".

/product

- ☐ Seven capabilities (5 + Practitioner Network + Revenue Layer).
- ☐ Multi-agent deep dive — eight agent cards with "what it never does".
- ☐ Network deep dive with handoff flow.
- ☐ Revenue Layer (marked "coming after launch").
- ☐ Ecosystem belt.
- ☐ FAQPage with five Q&As (Part 2.4 backing).

/for-practitioners

- ☐ 18 audience cards, each with a tailored value prop and ecosystem hint.
- ☐ No claim of partnership — only "designed to connect with".

/ecosystem (new)

- ☐ Full clustered list (Part 6.2) with cluster headers.
- ☐ Brand-ownership disclaimer.
- ☐ CTA back to waitlist.

/network (new)

- ☐ Agent-to-agent narrative.
- ☐ Example referral flow (trainer → RD → FM MD → longevity panel → recovery → mental performance).
- ☐ Referral revenue routing explainer.

/about

- ☐ Heritage block (no names).
- ☐ Austin, TX origin.

/careers

- ☐ **Drop the advisor role entirely** — remove from listing, sitemap, nav, structured data.
- ☐ Remaining roles all marked "Remote · Austin preferred".
- ☐ Role-application auto-reply wired.

/waitlist

- ☐ Standalone page mirroring home CTA with full form + counter.
- ☐ Confirmation + internal alert wired and tested (Part 9).

/contact

- ☐ Form posting to API route; contact auto-reply + internal companion email wired.

11.2 Cross-Cutting

- ☐ All breakpoints (Part 1) implemented and tested at 360, 375, 390, 393, 412, 768, 820, 1024, 1280, 1440, 1920, 2560.
- ☐ Touch targets ≥ 48 dp everywhere.
- ☐ Safe-area-inset handling on iOS verified on real device.
- ☐ All vertical-rhythm tokens (Part 3.1) applied; no element-to-element collision under 24 px.
- ☐ z-index policy enforced via lint rule.
- ☐ Atmospheric gradients pass WCAG AA contrast at densest point behind every text block.
- ☐ Mobile constellation simplifies per Part 3.6.
- ☐ `prefers-reduced-motion` collapses marquee, rotating pill, constellation.
- ☐ JSON-LD blocks (Organization, LocalBusiness, WebSite, FAQPage, BreadcrumbList) live in `<head>`.
- ☐ Canonical, hreflang, and geo-meta tags on every page.
- ☐ `sitemap.xml`, `robots.txt`, `llms.txt` deployed at root.

- ☐ Google Business Profile claimed as service-area business, NAP matches LocalBusiness JSON-LD.
- ☐ All four transactional emails tested across Gmail, Outlook, ProtonMail, iCloud.
- ☐ Resend domain status = **verified** for SPF + DKIM; DMARC at `p=none` for first two weeks.
- ☐ `RESEND_API_KEY` present in Production environment.
- ☐ From-address = `hello@send.xeniosotechnology.com`; reply-to = `team@xeniosotechnology.com`.
- ☐ Live counter on home, footer, waitlist page — all driven by one source with optimistic UI, baseline 550.
- ☐ No team-member first or last names anywhere on the site, in emails, in OG, or in source comments.
- ☐ No founder photos anywhere.
- ☐ Lighthouse on home ≥ 95 perf desktop / 90 mobile / 100 SEO / 95 a11y.
- ☐ LCP < 1.8 s, INP < 150 ms, CLS < 0.05 verified on PageSpeed Insights.
- ☐ mail-tester score $\geq 9/10$ for both confirmation and internal alert.

11.3 Pre-Launch Final Pass

- ☐ Read every visible word aloud — confirm voice consistency, no remnant advisor copy, no competitor names.
 - ☐ Walk the site on a real iPhone 15 Pro and a Pixel 8 at 375 / 390 / 393 — confirm no overlap, no clipped text, no broken safe areas, no horizontal scroll.
 - ☐ Submit waitlist from four different email providers — verify both emails for each in ≤ 30 seconds.
 - ☐ Run a Perplexity / ChatGPT query for "AI operating system for proactive health practitioners" two weeks after launch — confirm xenios. surfaces; iterate llms.txt and FAQ content if not.
-

End of revision 3 handoff.
